Following a brief review of structure and bonding, organic molecules and functional groups are presented as early as possible. The text is organized primarily by functional group, beginning with

simple alkanes and moving toward more complex compounds. Emphasis is placed on the fundamental mechanistic similarities of organic reactions. McMurry's thorough revision continues to present the solid content necessary for this course without sacrifice of important subjects and pedagogical tools. Text and reaction summaries, full problem sets, and outstanding artwork are just some of the features in the Third Edition, usually found in a full-year book. McMurry's clear, well-written explanations remain a highlight of the book.

This timely book introduces social aspects of the study of sexual health and their application to public health practice. The book addresses five key themes: Conceptual and theoretical aspects of sexual health, Sexual health outcomes of Risk and Vulnerability, Improving sexual health status and Measuring and assessing sexual health status. The authors consider each of these themes within their cultural and historical context and illustrate topics with international examples and case studies. Key features of the book include: A spotlight on populations rather than individuals, and a focus on the prevention of ill health and promotion of well being. A global perspective; the book makes the distinction between developing and developed countries, but recognises that inequalities are to be found within as well as between countries. A view of sexual behaviour as socially learned rather than biologically given and so as amenable to change and intervention to improve sexual health status. An emphasis on ways in which risk and vulnerability are products, not only of individual behaviours, but of the social context in which they are practiced. Written by authors with a wide range of experience, this book will be a valuable resource for public health practitioners and those studying and working in the area of sexual health. Understanding Public Health is an innovative series published by Open University Press in collaboration with the London School of Hygiene & Tropical Medicine. Series Editors: Ros Plowman and Nicki Thorogood Contributors: Sevgi O Aral, Chris Bonell, Helen Burchett, Joanna Busza, Martine Collumbien, Simon Forrest, Rebecca French, Claudia Garcia-Moreno, Anna Glasier, Jami Leichliter, Kirstin Mitchell, Will Nutland, Thomas Peterman, Elisabeth Pisani, Kaye Wellings, Meg Wiggins and Maria Zuurmond. For more than a quarter century, Cotton and Wilkinson's Advanced Inorganic Chemistry has been the source that students and professional chemists have turned to for the background needed to understand current research literature in inorganic chemistry and aspects of organometallic

chemistry. Like its predecessors, this updated Sixth Edition is organized around the periodic table of elements and provides a systematic treatment of the chemistry of all chemical elements and their compounds. It incorporates important recent developments with an emphasis on advances in the interpretation of structure, bonding, and reactivity."/p> From the reviews of the Fifth Edition: "The first place to go when seeking general information about the chemistry of a particular element, especially when up-to-date, authoritative information is desired." —Journal of the American Chemical Society "Every student with a serious interest in inorganic chemistry should have [this book]." —Journal of Chemical Education "A mine of information . . . an invaluable guide." —Nature "The standard by which all other inorganic chemistry books are judged." —Nouveau Journal de Chimie "A masterly overview of the chemistry of the elements." —The Times of London Higher Education Supplement "A bonanza of information on important results and developments which could otherwise easily be overlooked in the general deluge of publications." —Angewandte Chemie

The African Herbal Pharmacopoeia (AfrHP) provides comprehensive, up to date botanical, commercial and phytochemical information on over fifty of the most important African medicinal plants. The technical data were made on plant samples sourced from across the continent. These monographs prepared by leading African scientists, have been reviewed by international experts. Additional data includes micro morphology of the plant material, distribution maps and TLC Chromatograms. These data are crucial for producers, collectors and traders in medicinal plants and extracts as well as researchers, manufacturers and practitioners. The scope, quality and standard of these herbal monographs are comparable to those prepared in Europe, North America and Asia. Whilst this is the very first edition, it is being proposed to proceed to a second edition, quickly, as more plant species will be covered.

Economics and the Business Environment is directed at students who will be taking up managerial positions in trade and industry or in government. The economic environment of European companies is central to the book giving students a good impression of recent developments within the European economy. The theories described enable students to: calculate how much competition firms within a particular business sector are exposed to analyze the current economic position of a particular country and make exchange rate prognoses gauge the effect of the economic environment on business sales and profits. Complicated analyses and mathematical models have been avoided as much as possible. Instead, diagrams and graphs illustrate the causal relationships between economic factors, making this book an ideal primer for those needing the basics of economics for their business degree.

". . . [O]f value to anyone interested in understanding crime and trying to stop it."—Governor Mario M. Cuomo This explosive and thought-provoking investigation goes to the heart of America's fear of crime, takes on the most common myths, and sets them straight. How safe are we? Here are Crimewarp's startling conclusions: • The odds are twice as great that you will commit suicide this year than be murdered. • It is 32 times more likely that you will be involved in a car crash than become the victim of a violent street crime. • A woman is twice as likely to die of heart disease than be raped. Criminologist Georgette Bennett uses the latest statistics to predict these and other dramatic changes in future of crime. "[This] highly regarded book analyzes the ripple effect of intersecting new social forces in changing the nature of crime and society's changing responses to crime."—The Washington Post "A groundbreaking book, solidly researched, but easy to digest."—Kirkus Reviews
