Indecent Theology brings liberation theology up to date by introducing the radical critical approaches of gender, postcolonial, and queer theory. Grounded in actual examples from Latin America, Marcella Althaus-Reid's highly provocative, but immaculately researched book reworks three distinct areas of theology - sexual, political and systematic. It exposes the connections between theology, sexuality and politics, whilst initiating a dramatic sexual rereading of systematic

theology. Groundbreaking, intriguing and scholarly, Indecent Theology broadens the debate on sexuality and theology as never before.

Trophic cascades—the top-down regulation of ecosystems by predators—are an essential aspect of ecosystem function and well-being. Trophic cascades are often drastically disrupted by human interventions—for example, when wolves and cougars are removed, allowing deer and beaver to become destructive—yet have only recently begun to be considered in the development of conservation and management strategies. Trophic Cascades is the first comprehensive presentation of the science on this subject. It brings together some of the world's leading scientists and researchers to explain the importance of large animals in regulating ecosystems, and to relate that scientific knowledge to practical conservation. Chapters examine trophic cascades across the world's major biomes, including intertidal habitats, coastal oceans, lakes, nearshore ecosystems, open oceans, tropical forests, boreal and temperate ecosystems, low arctic scrubland, savannas, and islands. Additional chapters consider aboveground/belowground linkages, predation and ecosystem processes, consumer control by megafauna and fire, and alternative states in ecosystems. An introductory chapter offers a concise overview of trophic cascades, while concluding chapters consider theoretical perspectives and comparative issues. Trophic Cascades provides a scientific basis and justification for the idea that large predators and top-down forcing must be considered in conservation strategies, alongside factors such as habitat preservation and invasive species. It is a groundbreaking work for scientists and managers involved with biodiversity conservation and protection.

Delving into the widespread, contemporary longing for a more serious and communal experience of Christianity, this book provides important theoretical underpinnings and casts a vision for a new monasticism within the Wesleyan tradition. Elaine Heath and Scott Kisker call for the planting of neo-monastic churches which embody the Wesleyan vision of holiness in postmodern contexts. This book also points toward some vital shifts that are necessary in theological education in order to equip pastors to lead such communities. Longing for Spring helps Wesleyans of all stripes understand the theory and praxis necessary for planting neo-monastic communities as a new model of the church that is particularly important in the postmodern context. The authors write in an engaging, conversational style that is conversant with postmodern culture, yet thoroughly informed by critical research. Heath and Kisker boldly challenge the imagination of the church, both within and beyond Wesleyan traditions, to consider the possibility of revitalizing the church through the new monasticism.

Author is a renowned writer in international climbing community Fascinating story of hoax that inspired a quest for a North American Shangri-La Vivid recounting of fabled mountains from across the world Using an infamous deception about a fake mountain range in British Columbia as her jumping-off point, Katie Ives, the well-known editor of Alpinist, explores the lure of blank spaces on the map and the value of the imagination. In Imaginary Peaks she details the cartographical mystery of the Riesenstein Hoax within the larger context of climbing history and the seemingly endless quest for newly discovered peaks and claims of first ascents. Imaginary Peaks is an evocative, thought-provoking tale, immersed in the literature of exploration, study of maps, and basic human desire.

What was Martin Luther King Jr. really like? In this groundbreaking volume, Lewis V. Baldwin answers this question by focusing on the man himself. Drawing on the testimonies of friends, family, and closest associates, this volume adds much-needed biographical background to the discussion, as Baldwin looks beyond all of the mythic, messianic, and iconic images to treat King in terms of his fundamental and vivid humanness. Special attention is devoted to King's personal insecurities and struggles, his humility and affinity to common people, his delight in pleasant and passionate conversation, his insatiable love for the precious but ordinary things of life, his robust appetite for artfully-prepared and delicious soul food, his enduring appreciation for music and dance, his cheerful and playful attitude and spirit, his abiding interest in games and sports, and his amazing gift of wit,

humor, and laughter. King emerges here as an ordinary human being who enjoyed and celebrated life to the fullest, but was never bigger than life. Here we see the personal qualities of King—as a real, fleshly human being—and also as a man shaped by his social and cultural experiences and locations. This book reclaims the man behind the mythology.

Margaret E. Keck and Kathryn Sikkink examine a type of pressure group that has been largely ignored by political analysts: networks of activists that coalesce and operate across national frontiers. Their targets may be international organizations or the policies of particular states. Historical examples of such transborder alliances include anti-slavery and woman suffrage campaigns. In the past two decades, transnational activism has had a significant impact in human rights, especially in Latin America, and advocacy networks have strongly influenced environmental politics as well. The authors also examine the emergence of an international campaign around violence against women.

The focus of this book is on the more than 2000 caves of the Greenbrier Valley of West Virginia of which the 14 with lengths greater than 10 km have an aggregate length of 639 km. The major caves form the core part of sub-basins which drain to big springs and ultimately to the Greenbrier River. Individual chapters of this book describe each of the major caves and its associated drainage basin. The caves are formed in the Mississippian Greenbrier Limestone in a setting of undulating gentle folds. Fractures, lineaments and confining layers within the limestone are the main controlling factors. The caves underlie an extensive sinkhole plain which may relate to a major erosion surface. The caves are habitat for both aquatic and terrestrial organisms which are cataloged and described as are the paleontological remains found in some of the caves. The sinkhole plain of the Greenbrier karst and the underlying complex of cave systems are the end result of at least a ten million year history of landscape evolution which can be traced through the evolving sequence of cave passages and which is described in this book.

**Cascade Alpine Guide: Columbia River to Stevens Pass** John Wiley & Sons

This book gathers 14 original contributions published in an IJERPH Special Issue that deal with the perception of environmental sounds and how such sounds are likely to affect human quality of life and well-being and the experience of a place. The research focus over the years has been gradually shifting from treating sound simply as "noise" and something that cities should get rid of to a potential "resource" to promote and support community life in public spaces. Three main topics or "needs" to be addressed by researchers and practitioners emerged from this Special Issue: (1) the need to re-think "quietness" in cities as something that goes beyond the mere "pursuit of silence", (2) the need to integrate additional contextual factors in the characterization and management of urban acoustic environments for public health, and (3) the need to consider the acoustic quality of indoor spaces as opposed to an outdoor-only perspective. The contributions collected in this book will hopefully trigger new questions and inform the agenda of future researchers and practitioners in the environmental acoustics domain.
