Packed with travel information, including more listings, deals, and insider tips: CANDID LISTINGS of hundreds of places to dance, eat, drink, and sleep RELIABLE MAPS, from the twisting streets of Granada to the medina of Marrakesh MULTILINGUAL glossary including Arabic, Basque, Catalan, French, Gallego, Portuguese, and Spanish phrases INSIDER TIPS on finding the best jazz on Las Islas Baleares or scoring that magic carpet in a Rabat market HIDDEN SWEETS, from chocolate factories in

Astorga to honey-drizzled pastries in Tangier STRAIGHT TALK from travelers on everything from social graces to social justice

[The Official Railway Equipment Register](#)
 Macmillan

Published by the American Geophysical Union as part of the Geophysical Monograph Series, Volume 188. Diversity of Hydrothermal Systems on Slow Spreading Ocean Ridges presents a multidisciplinary overview of the remarkable emerging diversity of hydrothermal systems on slow spreading ocean ridges in the Atlantic, Indian, and Arctic oceans. When hydrothermal systems were first found on the East Pacific Rise and other Pacific Ocean ridges beginning in the late 1970s, the community consensus held that the

magma delivery rate of intermediate to fast spreading was necessary to support black smoker-type high-temperature systems and associated chemosynthetic ecosystems and polymetallic sulfide deposits. Contrary to that consensus, hydrothermal systems not only occur on slow spreading ocean ridges but, as reported in this volume, are generally larger, exhibit different chemosynthetic ecosystems, produce larger mineral deposits, and occur in a much greater diversity of geologic settings than those systems in the Pacific. The full diversity of hydrothermal systems on slow spreading ocean ridges, reflected in the contributions to this volume, is only now emerging and opens an exciting new frontier for ocean ridge exploration, including Processes of heat and chemical transfer from the

Earth's mantle and crust via slow spreading ocean ridges to the oceans The major role of detachment faulting linking crust and mantle in hydrothermal circulation Chemical reaction products of mantle involvement including serpentinization, natural hydrogen, abiotic methane, and hydrocarbon synthesis Generation of large polymetallic sulfide deposits hosted in ocean crust and mantle Chemosynthetic vent communities hosted in the diverse settings The readership for this volume will include schools, universities, government laboratories, and scientific societies in developed and developing nations, including over 150 nations that have ratified the United Nations Convention on the Law of the Sea. *Titles of Honor* John Wiley & Sons Financialising City Statecraft and Infrastructure addresses the struggles of national and local states to fund, finance and govern urban infrastructure. It develops fresh thinking on financialisation and city statecraft to explain the socially and spatially uneven mixing of managerial, entrepreneurial and financialised city governance in austerity and limited decentralisation across England. As urban infrastructure fixes for the London global city-region risk undermining national 'rebalancing' efforts in the UK, city statecraft in the rest of the country is having uneasily to combine speculation, risk-taking and prospective venturing with co-ordination, planning and regulation.

Primates in Flooded Habitats BoD - Books on Demand

As part of an emerging literature on place branding, this book fills the important gap between practice-oriented literature—which lacks in-depth and critical analysis—and technical academic literature—which tends to miss down-to-earth practitioners' concerns and to overlook policy and political contexts. Providing frameworks and knowledge on how to practice place branding effectively, this book anchors place-branding practices in a solid analytical framework. It presents place-branding practices through the lenses of public sector marketing, strategic management, and governance processes and structures, as well as communication tools. Marketing a place is more than creating a logo and a motto; this book presents the key strategic aspects to be considered when promoting a place. Readers will gain knowledge about the most important features of place promotion: the development of brands and marketing campaigns in the public sector, the establishment of dedicated politico-administrative

structures, and the increasing involvement of various stakeholders that play a central role as place promoters. This book will be a valuable resource for researchers and postgraduate students across place branding, marketing and management, and urban studies, as well as public management, administration, and policy. The practical conclusions discussed in the book will also appeal to practitioners, business consultants, and people working in public administration and politics. *Index Medicus* Edward Elgar Publishing Homeless people with mental disorders and neuropsychiatric diseases are ubiquitous, in space and time, in mankind's history. Psychosis, personality disorders, drug abuse, and other brain illnesses represent a true challenge to medicine and society. Homeless people could be, indeed, brought to the attention of marontology, an unborn specialty of medicine, already suggested after the Greek word marontos, which means unwanted. Homelessness is one of the most critically important issues of the contemporaneous world, without a solution in sight, so more research in areas such as psychiatry, psychology, and human neuroscience is needed, for a better understanding of the phenomenon. *Urban Planning, Management and Governance in Emerging Economies* John Wiley & Sons Vols. for 1963- include as pt. 2 of the Jan. issue: Medical subject headings.

Official Gazette Springer Nature A ground breaking study of primates that live in flooded habitats around the world. **Official Records of the Union and Confederate Navies in the War of the Rebellion: v. 1. Statistical Data of Union and Confederate Ships; Muster Roles of Confederate Government Vessels; Letters of Marque and Reprisals; Confederate Department Investigations** Cambridge University Press

Exploring how urban professionals plan, manage and govern cities in emerging economies, this insightful book studies the actions and instruments they employ. It highlights how the paradigms of interventions and approaches to urban management are shifting, indicating that urban governance is becoming increasingly important in dealing with wicked issues, like climate change and social and economic inequalities in cities. **Ann Arbor, Michigan City Directory** Edward Elgar Publishing Jan. 2003- : "7 directories in 1: section 1: alphabetical section; section 2: business section; section 3: telephone number section; section 4: street guide; section 5:

map section; section 6: movers & shakers; section 7: demographic summary." *Cumulated Index Medicus* Elsevier Reprint of the original, first published in 1883.

Annual Report Springer

A Companion to Mexican History and Culture features 40 essays contributed by international scholars that incorporate ethnic, gender, environmental, and cultural studies to reveal a richer portrait of the Mexican experience, from the earliest peoples to the present. Features the latest scholarship on Mexican history and culture by an array of international scholars Essays are separated into sections on the four major chronological eras Discusses recent historical interpretations with critical historiographical sources, and is enriched by cultural analysis, ethnic and gender studies, and visual evidence The first volume to incorporate a discussion of popular music in political analysis This book is the recipient of the 2013 Michael C. Meyer Special Recognition Award from the Rocky Mountain Conference on Latin American Studies.

Index of Trademarks Issued from the United States Patent Office Frontiers Media SA

Research in recent years has increasingly shifted away from purely academic research, and into applied aspects of the discipline, including climate change research, conservation, and sustainable development. It has by now widely been recognized that "traditional" knowledge is always in flux and adapting to a quickly changing environment. Trends of globalization, especially the globalization of plant markets, have greatly influenced how plant resources are managed nowadays. While ethnobotanical studies are now available from many regions of the world, no comprehensive encyclopedic series focusing on the worlds mountain regions is available in the market. Scholars in plant sciences worldwide will be interested in this website and its dynamic content. The field (and thus the market) of ethnobotany and ethnopharmacology has grown considerably in recent years. Student interest is on the rise, attendance at professional conferences has grown steadily, and the number of professionals calling themselves ethnobotanists has increased significantly (the various societies (Society for Economic Botany, International Society of Ethnopharmacology, Society of Ethnobiology, International Society for Ethnobiology, and many regional and national societies in the field currently have thousands of members). Growth has

been most robust in BRIC countries. The objective of this new MRW on Ethnobotany of Mountain Regions is to take advantage of the increasing international interest and scholarship in the field of mountain research. We anticipate including the best and latest research on a full range of descriptive, methodological, theoretical, and applied research on the most important plants for each region. Each contribution will be scientifically rigorous and contribute to the overall field of study.

Place Branding and Marketing from a Policy Perspective John Wiley & Sons

It has long been recognized that metal spin states play a central role in the reactivity of important biomolecules, in industrial catalysis and in spin crossover compounds. As the fields of inorganic chemistry and catalysis move towards the use of cheap, non-toxic first row transition metals, it is essential to understand the important role of spin states in influencing molecular structure, bonding and reactivity. *Spin States in Biochemistry and Inorganic Chemistry* provides a complete picture on the importance of spin states for reactivity in biochemistry and inorganic chemistry, presenting both theoretical and experimental perspectives. The successes and pitfalls of theoretical methods such as DFT, ligand-field theory and coupled cluster theory are discussed, and these methods are applied in studies throughout

the book. Important spectroscopic techniques to determine spin states in transition metal complexes and proteins are explained, and the use of NMR for the analysis of spin densities is described. Topics covered include: DFT and ab initio wavefunction approaches to spin states Experimental techniques for determining spin states Molecular discovery in spin crossover Multiple spin state scenarios in organometallic reactivity and gas phase reactions Transition-metal complexes involving redox non-innocent ligands Polynuclear iron sulfur clusters Molecular magnetism NMR analysis of spin densities This book is a valuable reference for researchers working in bioinorganic and inorganic chemistry, computational chemistry, organometallic chemistry, catalysis, spin-crossover materials, materials science, biophysics and pharmaceutical chemistry.

Cumulative List of Organizations Described in Section 170 (c) of the Internal Revenue Code of 1954

Vols. for 1837-52 include the Companion to the Almanac, or Year-book of general information.

Oxidative Stress and Neurodegenerative Disorders

Oxidative stress is the result of an imbalance in pro-oxidant/antioxidant homeostasis that leads to the generation of toxic reactive oxygen species. Brain cells are continuously exposed to reactive

oxygen species generated by oxidative metabolism, and in certain pathological conditions defense mechanisms against oxygen radicals may be weakened and/or overwhelmed. DNA is a potential target for oxidative damage, and genomic damage can contribute to neuropathogenesis. It is important therefore to identify tools for the quantitative analysis of DNA damage in models on neurological disorders. This book presents detailed information on various neurodegenerative disorders and their connection with oxidative stress. This information will provide clinicians with directions to treat these disorders with appropriate therapy and is also of vital importance for the drug industries for the design of new drugs for treatment of degenerative disorders. * Contains the latest information on the subject of neurodegenerative disorders* Reflects on various factors involved in degeneration and gives suggestions for how to tackle these problems
