MAXIMILLIAN DESHAWN

Strategies for Supporting Inclusion and Diversity in the Academy Springer
This book employs the realm of English Language Teaching (ELT) as a discursive point of departure to explore how individuals, groups, entities and institutions apprehend, embrace, deal with, manipulate, problematize and resist glocal flows of people, ideas, information, goods, and technology. It apprehends and

attends to tensions arising from the fluidly local-global construction and negotiation of borders of identity and interaction within a diverse array of contexts and English education therein. These tensions, whether conceptual or pedagogical, may arise in and through governmental and institutional policymaking, teacher training, or curriculum and materials development, and in the learning experience both within and beyond the classroom, as teachers and students engage with course content and each other.

2014 International Conference on Social Science and Environment Protection (SSEP2014) Cambridge University Press

Language education tends to require more face-to-face interaction and longer hours of both teaching and learning. The challenges of ensuring the future and development of the discipline, especially after a time of crisis, is equally

unprecedented. A comprehensive overview of the global picture of best practices as well as research in recent times are needed in the field of language education, particularly in higher education settings. The changing nature of language education in terms of its policy, curriculum design, methodology, and innovation is an essential discussion to advance the field. It is critical to explore how a more collaborative, global, and interdisciplinary mindset, as well as technologically driven approaches have emerged through recent years and how it will continue to shape the future development in the field. Trends and Developments for the Future of Language Education in Higher Education captures the current trends and ongoing development within language education through a global picture of the best practices as well as the latest research on language education in higher education settings. The chapters cover changes in policy, curriculum design, methodology, and innovation in the modern language education landscape. While focusing on the current situation of language education and the changes that it has been undergoing, this book also provides

information on future development and the overall outlook of language education. This book is ideal for teachers, instructional designers, curricula developers, inservice and preservice teachers, administrators, teacher educators, practitioners, researchers, academicians, and students looking for an overview of the current position of language education in higher education.

5 Steps to a 5 AP US Government and Politics, 2014-2015 Edition McGraw Hill Professional

This comprehensive Handbook provides an international perspective on contemporary issues and future directions in teaching and learning in tourism. Key topics include assurance of learning, development of skills, learning in the field, work integrated learning, sustainability and critical studies, internationalisation, technology enabled learning, links between teaching and research, and graduate student supervision. Within these topics attention is devoted to the discussion of curriculum, pedagogy, assessment, students, educators and trends and issues. The Handbook provides a valuable resource for understanding teaching and learning

theory and practice in tourism.

5 Steps to a 5 AP English Language, 2014-2015 Edition McGraw Hill

Professional

Teachers of Chinese as a foreign language in many international contexts are searching for pedagogic solutions to promote effective learning. Models of innovative and successful approaches are urgently needed. This volume presents a collection of compelling and empirically rich research studies that showcases innovative developments in the practice of teaching Chinese as a foreign language. The studies focus on three interrelated areas: learners, teachers, and applications of new technologies. Specifically, the studies explore methods for fostering learner-centred classrooms, autonomous learners, intercultural learning, the role of teacher views and identities, the nature of a 'middle ground' approach, and technologies that accommodate the unique aspects of the Chinese language, with new options for mobile and interactive learners. Providing both inspiration and practical models for language practitioners and researchers, it offers a vital resource for teachers'

professional development, and for pre-service teacher education.

5 Steps to a 5 AP Microeconomics, 2014-2015 Edition Oswaal Books

The 8th International Conference on Physical Modelling in Geotechnics (ICPMG2014) was organised by the Centre for Offshore Foundation Systems at the University of Western Australia under the auspices of the Technical Committee 104

for Physical Modelling in Geotechnics of the International Society of Soil Mechanics and Geotechnical Engineering. This quadrennial conference is the traditional focal point for the physical modelling community of academics, scientists and engineers to present and exchange the latest developments on a wide range of physical modelling aspects associated with geotechnical engineering. These proceedings, together with the seven previous proceedings dating from 1988, present an inestimable collection of the technical and scientific developments and breakthroughs established over the last 25 years. These proceedings include 10 keynote lectures from scientific leaders within the physical modelling community and 160 peer-reviewed papers from 26 countries. They are organised in 14 themes, presenting the latest developments in physical modelling technology, modelling techniques and sensors, through a wide range of soil-structure interaction problems, including shallow and deep foundations, offshore geotechnics, dams and embankments, excavations and retaining structures and slope stability. Fundamental aspects of

earthquake engineering, geohazards, ground reinforcements and improvements, and soil properties and behaviour are also covered, demonstrating the increasing complexity of modelling arising from state-of-the-art technological developments and increased understanding of similitude

principles. A special theme on education presents the latest developments in the use of physical modelling techniques for instructing undergraduate and postgraduate students in geotechnical engineering.
