During the Cold War, freedom of expression was vaunted as liberal democracy's most cherished possession—but such freedom was put in service of a hidden agenda. In *The Cultural Cold War*, Frances Stonor Saunders reveals the extraordinary efforts of a secret campaign in which some of the most vocal exponents of intellectual freedom in the West were working for or subsidized by the CIA—whether they knew it or not. Called "the most comprehensive account yet of the [CIA's] activities between 1947 and 1967" by the *New York Times*, the book presents shocking evidence of the CIA's undercover program of cultural interventions in Western Europe and at home, drawing together declassified documents and exclusive interviews to expose the CIA's astonishing campaign to deploy the likes of Hannah Arendt, Isaiah Berlin, Leonard Bernstein, Robert Lowell, George Orwell, and Jackson Pollock as weapons in the Cold War. Translated into ten languages, this classic work—now with a new preface by the author—is "a real contribution to popular understanding of the postwar period" (*The Wall Street Journal*), and its story of covert cultural efforts to win hearts and minds continues to be relevant today.

An original full-length novel set in the Halo universe and based on the *New York Times* bestselling video game series! August 2558. Rion Forge was once defined by her relentless quest for hope amidst the refuse and wreckage of a post-Covenant War galaxy—years spent searching for family as much as fortune. But

that was before Rion and the crew of her salvager ship Ace of Spades encountered a powerful yet tragic being who forever altered their lives. This remnant from eons past, when the Forerunners once thrived, brought with it a revelation of ancient machinations and a shocking, brutal history. Unfortunately, the Ace crew also made dire enemies of the Office of Naval Intelligence in the process, with the constant threat of capture and incarceration a very real possibility. Now with tensions mounting and ONI forces closing in, Rion and her companions commit to this being's very personal mission, unlocking untold secrets and even deadlier threats that have been hidden away for centuries from an unsuspecting universe....

Drawing Futures brings together international designers and artists for speculations in contemporary drawing for art and architecture. Despite numerous developments in technological manufacture and computational design that provide new grounds for designers, the act of drawing still plays a central role as a vehicle for speculation. There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world. In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world, the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation. Drawing Futures will present a compendium of projects, writings and interviews that critically reassess the act of drawing and where its future may lie. Drawing Futures focuses on the discussion of

how the field of drawing may expand synchronously alongside technological and computational developments. The book coincides with an international conference of the same name, taking place at The Bartlett School of Architecture, UCL, in November 2016. Bringing together practitioners from many creative fields, the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas.

The bark canoes of the North American Indians, particularly those of birchbark, were among the most highly developed manually propelled primitive watercraft. Built with Stone Age tools from available materials, their design, size, and appearance were varied to suit the many requirements of their users. Even today, canoes are based on these ancient designs, and this fascinating guide combines historical background with instructions for

constructing one. Author Edwin Tappan Adney, born in 1868, devoted his life to studying canoes and was practically the sole scholar in his field. His papers and research have been assembled by a curator at the Smithsonian Institution.

From one of America's most brilliant writers, a New York Times bestselling journey through psychology, philosophy, and lots of meditation to show how Buddhism holds the key to moral clarity and enduring happiness. At the heart of Buddhism is a simple claim: The reason we suffer—and the reason we make other people suffer—is that we don't see the world clearly. At the heart of Buddhist meditative practice is a radical promise: We can learn to see the world, including ourselves, more clearly and so gain a deep and morally valid happiness. In this "sublime" (The New Yorker), pathbreaking book, Robert Wright shows how taking this promise seriously can change your life—how it can loosen the grip of anxiety, regret, and hatred, and how it can deepen your appreciation of beauty and of other people. He also shows why this transformation works, drawing on the latest in neuroscience and psychology, and armed with an acute understanding of human evolution. This book is the culmination of a personal journey that began with Wright's landmark book on evolutionary psychology, *The Moral Animal*, and deepened as he immersed himself in meditative practice and conversed with some of the world's most skilled meditators. The result is a story that is "provocative, informative and...deeply rewarding" (The New York Times Book Review), and as entertaining as it is illuminating. Written with the wit, clarity, and grace for which Wright is famous, *Why Buddhism Is True* lays the foundation for a spiritual

life in a secular age and shows how, in a time of technological distraction and social division, we can save ourselves from ourselves, both as individuals and as a species.

Since its opening in 1867, the Tunbridge Worlds Fair has drawn hundreds of thousands of people to its one-of-a-kind event, showcasing the best of regional agriculture and entertainment. The fair, originally intended to determine who owned the fastest horse or best-looking cow, began as an improvised event in farmer Elisha Lougees North Tunbridge pasture and quickly grew into the complex it is today, with well-developed fairgrounds centered around a half-mile racetrack. During the 1929 fair, the Log Cabin Museum was opened with many local residents reenacting the skills of the early settlers. Over the generations, the fair has matured into the best of its kind in northern New England.

As the greater volatility of current financial markets has driven

investors to seek shelter from increasing uncertainty, the quant revolution has given people the opportunity to avoid unwanted financial risk by literally trading it away, or more specifically, paying someone else to take on the unwanted risk. In this fascinating collection of Wall Street war stories, more than two dozen quants detail their roots, roles, and
