Nachhaltig erfolgreich Die
Klimakrise schreitet
voran, der Planet erwärmt
sich, Wachstum und
Konsum verbrauchen
unsere Ressourcen im
Übermaß - ein Umdenken

ist gerade in der
Wirtschaft längst
überfällig. Immer mehr
Unternehmer fragen sich
daher, wie sie ihre
Unternehmen
umweltfreundlich und
zugleich zukunftssicher
umgestalten können.
Hierzu sind nachhaltige
Lösungen gefragt, die
auch wirtschaftlich
erfolgreich sind. Oliver
Specht und Axel Nauert
beschreiben, wie man ein

solches Geschäftsmodell,
das klimaneutral und
zugleich ökonomisch
erfolgreich ist, für nahezu
jedes Unternehmen
entwickeln kann. Sie
erläutern anhand
konkreter Beispiele, wie
man eine langfristige
Change-Strategie entwirft,
systematisch eine
entsprechende neue
Führungs- und
Innovationskultur einführt
und mit gezieltem

Empowerment die Herausforderungen der Zukunft meistert. Sie zeigen, wie jedes Unternehmen Schritt für Schritt in wenigen Jahren umweltverträglich umgesteuert werden kann – bis es die Auszeichnung »Planetproofed« auch wirklich verdient.
Holt Komm Mit!
 Cambridge University Press
 Zwei Freunde. Elf Reisen. Ein Kochbuch. Vor knapp 15 Jahren war es noch ganz normal, Obst, Gemüse, Getreide, Milch oder Fleisch aus der

eigenen Region zu beziehen. Doch über die Jahre hat sich die Bezeichnung und auch der wahre Ursprung der Regionalität verfälscht und kommerzialisiert. Georg Schweisfurth und Simon Tress machen sich daher auf die Suche nach dem echten = lokalen Geschmack. Lokal bedeutet für die beiden: Bezug von Lebensmitteln, die maximal 15 Kilometer um den eigenen Lebensmittelpunkt herum produziert werden. Dafür reisen sie an elf ganz unterschiedliche Orte in

Deutschland, Österreich, Südtirol und der Schweiz. Doch gut informiert losfahren, vielleicht noch vollbepackt mit Lebensmitteln, wäre Georg Schweisfurth und Simon Tress zu einfach. Deshalb stellen sie sich einer Challenge: Übers Internet kann sich jeder, der Lust hat, mit seinem Ort für eine der Reisen bewerben. Sobald ein Reiseziel live im Internet ausgelost wurde, machen sich die beiden Autoren auf den Weg. Angekommen müssen sie mit allem, was sie im

Umkreis von 15 Kilometern vorfinden, etwas Schmackhaftes kreieren. Das einzige Produkt, das die beiden immer bei sich haben, ist ein Sack guten Salzes. Nach dem Kochen werden die Speisen mit Gästen an einer langen Tafel genossen. Aus den Rezepten, den Interviews mit Menschen, die Wert auf gute und nach ökologischen Grundsätzen hergestellte Lebensmittel legen, und packenden Fotos ist ein einzigartiges Lesekochbuch entstanden – das zeigt, welche

kulinarischen Möglichkeiten sich schon in allernächster Nähe auftun. Es braucht kein Flugobst aus Neuseeland, noch nicht einmal Tomaten aus Italien, wenn wir das wahre „Regional“ wieder zu schätzen lernen: das Lokale.

Global Warming □□□□□□

Why another book about vaccines? There are already a few extremely well-written medical textbooks that provide

comprehensive, state-of-the-art technical reviews regarding vaccine science. Additionally, in the past decade alone, a number of engrossing, provocative books have been published on various related issues ranging from vaccines against specific diseases to vaccine safety and policy. Yet there remains a significant gap in the literature – the history of vaccines. *Vaccines: A Biography* seeks to fill a void in the extant literature by focusing on the history of vaccines and in so doing,

recounts the social, cultural, and scientific history of vaccines; it places them within their natural, historical context. The book traces the lineage – the “biography” – of individual vaccines, originating with deeply rooted medical problems and evolving to an eventual conclusion. Nonetheless, these are not “biographies” in the traditional sense; they do not trace an individual’s growth and development. Instead, they follow an idea as it is conceived and developed, through the

contributions of many. These are epic stories of discovery, of risk-takers, of individuals advancing medical science, in the words of the famous physical scientist Isaac Newton, “by standing on the shoulders of giants.” One grant reviewer described the book’s concept as “triumphalist”; although meant as an indictment, this is only partially inaccurate. *Stories in the Time of Cholera* Vincentz Network GmbH & Co KG
Lester S. King, M.D., focuses on those aspects

of medicine that remain constant through the centuries--the problems that doctors always face and the critical judgment needed to solve them. According to Dr. King, modern technological advances are really new ways of answering old questions, while the basic modes of medical thinking have not changed. Originally published in 1982. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the

distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905. **Another Global City** Princeton University Press In this first English-language study of popular

and scientific responses to tuberculosis in nineteenth-century France, David Barnes provides a much-needed historical perspective on a disease that is making an alarming comeback in the United States and Europe. Barnes argues that French perceptions of the disease—ranging from the early romantic image of a consumptive woman to the later view of a scourge spread by the poor—owed more to the power structures of nineteenth-century society than to medical

science. By 1900, the war against tuberculosis had become a war against the dirty habits of the working class. Lucid and original, Barnes's study broadens our understanding of how and why societies assign moral meanings to deadly diseases.

Organic Coatings CRC Press

A case-study in the history of sleeping sickness, relating it to the western 'civilising mission'.

Reprint of the original, first published in 1872. The publishing house Anatiposi publishes historical books as reprints. Due to their age, these books may have missing pages or inferior quality. Our aim is to preserve these books and make them available to the public so that they do

not get lost.

Alloys and Intermetallic Compounds Princeton University Press

One quirk of fate can send life spiralling in the most unexpected direction... A young girl loses her mother when a block of ice falls from the sky. A woman wins the jackpot twice. A man is struck by lightning four times. Coincidence? Or something more? Things That Fall from the Sky is the tale of three lives that are changed forever by random events. But it is also a meditation on the

endurance of love, the passage of time and the pain of loss. Selja Ahava, one of Finland's best-loved novelists, weaves these stories together in an unforgettable, one-of-a-kind fable about the twists and turns that can define a lifetime.

Essays of Robert Koch
Houghton Mifflin Harcourt
A horrifying epidemic of smallpox was sweeping across the Americas when the War of Independence began, and yet little is known about it. Fenn reveals how deeply "variola" affected the

outcome of the war in every colony and the lives of everyone in North America. Illustrations.

Medical Thinking John Wiley & Sons
Die Vierteljahresschrift Koreana der Korea Foundation stellt seit ihrer ersten Ausgabe im Jahr 1987 die traditionelle Kultur Koreas und die verschiedenen Seiten der modernen Kultur und Kunst des Landes vor und trägt dazu bei, die Kenntnisse über Korea im Ausland zu erweitern und Interesse dafür zu wecken. Zu diesem Zweck

wird für jede Ausgabe jeweils ein bestimmtes Thema gewählt und intensiv behandelt. Weitere Artikel behandeln aktuelle Kulturereignisse, Persönlichkeiten aus dem Kunst- und Kulturleben, Lebensstile Koreas, Natur und Ökologie sowie Literatur.

Manual of Bacteriology Columbia University Press
Charts how, why, and by whom germ theory was transformed from a hotly disputed speculation to a central tenet of modern medicine.

Archer's Global Warming: Understanding the Forecast 2nd Edition, is the first real text to present the science and policy surrounding climate change at the right level. Accompanying videos, simulations and instructional support makes it easier to build a syllabus to improve and create new material on climate change. Archer's polished writing style makes the text entertaining while the improved pedagogy helps

better understand key concepts, ideas and terms. This edition has been revised and reformulated with a new chapter template of short chapter introductions, study questions at the end, and critical thinking puzzlers throughout. Also a new asset for the BCS was created that will give ideas for assignments and topics for essays and other projects. Furthermore, a number of interactive models have been built to help understand the science and systems behind the

processes. *Things that Fall from the Sky* Harvard University Press René Théophile Hyacinthe Laennec (1781-1826) is best known for his invention of the stethoscope, one of medicine's most powerful symbols. Histories, novels, and films have cloaked his life in hagiography and legend. Jacalyn Duffin's fascinating new biography relies on a vastly expanded foundation of primary source material, including thousands of pages of handwritten

patient records, lecture notes, unpublished essays, and letters. She situates Laennec, the scientist and teacher, within the broader social and intellectual currents of post-Revolutionary France. Her work uncovers a complex character who participated actively in the dramatic changes of his time. Laennec's famous *Treatise on Mediate Auscultation* was his only published book, but two lesser known works were left in manuscript: an early

treatise on pathological anatomy and a later set of lectures on disease. The three parts of Duffin's biography correspond to these books. First, she examines Laennec's student research on the emerging science of pathological anatomy, the background for his major achievement. Second, she uses his clinical records to trace the discovery and development of "mediate auscultation" (listening through an instrument, or mediator, to sounds within the human body). The stethoscope allowed

clinicians to "see" the organic alterations inside their living patients' bodies. Finally, she explores the impact of auscultation on diagnostic practice and on concepts of disease. Analyzed here for the first time in their entirety, Laennec's Collège de France lectures reveal his criticism of over-enthusiastic extrapolations of his own method at the expense of the patient's story. Originally published in 1998. The Princeton Legacy Library uses the latest print-on-demand

technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905. This book focuses on the role of modeling in the design of alloys and intermetallic compounds. It includes an introduction to the most important and most used modeling techniques, such as CALPHAD and ab-initio methods, as well as a section devoted to the latest developments in applications of alloys. The book emphasizes the correlation between modeling and technological developments while

discussing topics such as wettability of Ultra High Temperature Ceramics by metals, active brazing of diamonds to metals in cutting tools, surface issues in medicine, novel Fe-based superconductors, metallic glasses, high entropy alloys, and thermoelectric materials.

American Review of Tuberculosis and Pulmonary Diseases

Univ of California Press
The definitive guide to organic coatings, thoroughly revised and updated—now with

coverage of a range of topics not covered in previous editions Organic Coatings: Science and Technology, Fourth Edition offers unparalleled coverage of organic coatings technology and its many applications. Written by three leading industry experts (including a new, internationally-recognized coatings scientist) it presents a systematic survey of the field, revises and updates the material from the previous edition, and features new or additional treatment of

such topics as superhydrophobic, ice-phobic, antimicrobial, and self-healing coatings; sustainability, artist paints, and exterior architectural primers. making it even more relevant and useful for scientists and engineers in the field, as well as for students in coatings courses. The book incorporates up-to-date coverage of recent developments in the field with detailed discussions of the principles underlying the technology and their applications in

the development, production, and uses of organic coatings. All chapters in this new edition have been updated to assure consistency and to enable extensive cross-referencing. The material presented is also applicable to the related areas of printing inks and adhesives, as well as areas within the plastics industry. This new edition Completely revises outdated chapters to ensure consistency and to enable extensive cross-referencing Correlates the

empirical technology of coatings with the underlying science throughout Provides expert troubleshooting guidance for coatings scientists and technologists Features hundreds of illustrative figures and extensive references to the literature A new, internationally-recognized coatings scientist brings fresh perspective to the content. Providing a broad overview for beginners in the field of organic coatings and a handy reference for seasoned

professionals, Organic Coatings: Science and Technology, Fourth Edition, gives you the information and answers you need, when you need them.
