Public Health
in East and
Southeast
Asia presents
an overview of
the state of
public health
across this
vast region
and considers

the challenges
and prospects
for its future
advancement.
It pays
particular
attention to
how rapid
economic
progress has

brought accelerated change, both demographic and epidemiological, to an area already marked by great heterogeneity in health status and public health systems. In comparative and thematically oriented chapters, leading scholars consider such issues as changes in values and lifestyles, infectious diseases, nutrition, tobacco, chronic

diseases, accidents and injury, environmental health, occupational health, the effect of globalization, and health services.

Basic Civitas Books
This new edition of a classic feminist book explains how one of the great historical revolutions - the ongoing movement toward equality between the sexes - has

come about. Its origins are to be found, not in changing ideas, but in the economic developments that have made women's labour too valuable to be spent exclusively in domestic pursuits. The revolution is unfinished; new arrangements are needed to fight still-prevalent discrimination in the workplace, to achieve a more just sharing of housework and childcare

between women and men, and, with the weakening of the institution of marriage, to re-erect a firm economic basis for the raising of children.

 This fully updated third edition analyzes the media industries and their activities from macro to micro levels, using concepts and theories to demonstrate the role the media plays in the economy as a whole. This textbook breaks new ground through its analysis of the rapidly changing and evolving media

economy from two unique perspectives. First, the book explores how media industries function across global, national, household, and individual levels of society. Second, it assesses how key forces such as technology, globalization, regulation, and consumer aspects are constantly evolving and influencing media industries. This new edition incorporates thoroughly updated theory and research as well as expanded case studies that include examples from international markets such as Asia, Europe, and Latin America. It builds on the contributions of the previous edition by providing new references and current data to define and analyze today's media markets and offers a more expansive assessment of streaming business models as well as the effects of Covid-19 on the media economy. Written in an accessible style and presenting a holistic global perspective of the role of media in the global economy, the textbook provides crucial insights for students and practitioners of media economics, media management and media industries. Economics Pearson Higher Ed 'Economics' provides a

serious analytical approach to the discipline by introducing the main ideas and then developing those ideas with the latest research, policy and data.

The aim of this book is to answer from an economics viewpoint such questions as why some people go to college while others do not, and why the percentages of different types of

students going to college have changed so dramatically throughout the world over the past few decades. The information contained is up-to-date, but the contents will be accessible even to those without a major in economics. The author makes many original contributions to the field of economics of education, in particular by giving serious consideration to cases of capital market imperfection.

The book is written so that the reader can gain a multi-dimensional and comprehensive understanding of major issues related to college-going behavior.

While specialists of this field will find it indispensable, economics students up to postgraduate level can use this volume as a textbook on the economics of education or on applied microeconomics.

Through compelling examples, clear explanations and the latest instructive online resources, the text draws students into the content and reinforces learning through practice and solving problems which are relevant to them. The authors train students to think about issues in the way real economists do, and learn how to explore difficult policy problems and make more informed decisions by offering a clear introduction to theory and applying the concepts to today's events, news, and research. In every major city in the world there is a housing crisis. How did this happen and what can

we do about it? Everyone needs and deserves housing. But today our homes are being transformed into commodities, making the inequalities of the city ever more acute. Profit has become more important than social need. The poor are forced to pay more for worse housing. Communities are faced with the violence of displacement and gentrification. And the

benefits of decent housing are only available for those who can afford it. In Defense of Housing is the definitive statement on this crisis from leading urban planner Peter Marcuse and sociologist David Madden. They look at the causes and consequences of the housing problem and detail the need for progressive alternatives. The housing crisis cannot be solved by minor policy shifts, they argue. Rather,

the housing crisis has deep political and economic roots—and therefore requires a radical response.

latest policy and data while incorporating Global Issues. From our global food shortage to global warming, economic issues permeate our everyday lives. Parkin brings critical issues to the forefront. Each chapter begins with one of today's key issues, and additional issues appear throughout the chapter to show the real-world applications of the theory being discussed. When the

chapter concludes, students "read between the lines" to think critically about a news article relating to the issue, demonstrating how thinking like an economist helps make informed decisions.
