for development of an abscess before we perform incision and drainage? What are the antibiotics of choice for odontogenic infections, and how long should the treatment course last? Is clindamycin losing its effectiveness in odontogenic infections? Should we use prophylactic antibiotics for removal of erupted teeth, impacted teeth, dental implants, or other dentoalveolar surgery? How can we as dentists minimize our contribution to the problem of antibiotic resistance? How will culture and antibiotic sensitivity testing be done in the foreseeable future? How can osteomyelitis of the jaws be diagnosed at the earliest possible time? How should the practicing oral and maxillofacial surgeon manage cases of odontogenic deep neck infections that extend beyond his/her area of expertise? Do dental infections really cause central nervous system infections? What are the lessons we can glean from review of recent closed malpractice cases involving oral and maxillofacial infections? How do we manage oral infections in the severely immunocompromised host, such as in chemotherapy for blood cancers or in bone marrow transplant patients? What is the role of biofilms in severe head and neck infections? How strong is the evidence supporting oral inflammation as a cause of systemic disease?

"MCQs, SAQs, EMQs and OSCEs for Oral Pathology and Oral Medicine-An exam-focused Approach" is designed to serve as a companion to the available textbooks in oral pathology and oral medicine and is meant to serve as a revision tool for dental students and graduates preparing for examinations. The book is structured to complement student lecture notes, recommended textbooks and past exam papers. Globally, the current trend is to use a combination of multiple-choice questions (MCQs), short answer questions (SAQs), extended matching questions (EMQs) and objective structured clinical examination (OSCE) stations in the examination process. Available textbooks in oral pathology and oral medicine are not of much value to students preparing for exams using these assessment formats. The aim of this book therefore is to offer students with a single source that would assist them to prepare for exams. Target audience for this book includes dental students, oral health therapy and dental hygiene students, overseas-trained dental graduates preparing for board or licensing examinations and those preparing for membership or fellowship examinations of the Royal Surgical Colleges.
