The ABC of Communism Polymarket Press
The first book of its kind, *Learner English on Computer* is intended to provide linguists, students of linguistics and modern languages, and ELT professionals with a highly accessible and comprehensive introduction to the new and rapidly-expanding field of corpus-based research into learner language. Edited by the founder and co-ordinator of the International Corpus of Learner English (ICLE), the book contains articles on all aspects of corpus compilation, design and analysis. The book is divided into three

main sections; in Part 1, the first chapter provides the reader with an overview of the field, explaining links with corpus and applied linguistics, second language acquisition and ELT. The second chapter reviews the software tools which are currently available for analysing learner language and contains useful examples of how they can be used. Part 2 contains eight case studies in which computer learner corpora are analysed for various lexical, discourse and grammatical features. The articles contain a wide range of methodologies with broad general application. The chapters in Part 3 look at how Computer Learner Corpus (CLC) based studies can help improve pedagogical tools: EFL grammars, dictionaries, writing textbooks and electronic tools. Implications for classroom methodology are also discussed. The comprehensive scope of this volume should be invaluable to applied linguists and corpus linguists as well as to would-be learner corpus builders and analysts who wish to discover more about a new, exciting and fast-growing field of research.

Fluent Forever John Benjamins Publishing
Bleak House opens in the twilight of foggy London, where fog grips the city most densely in the Court of Chancery. The obscure case of Jarndyce and

Jarndyce, in which an inheritance is gradually devoured by legal costs, the romance of Esther Summerson and the secrets of her origin, the sleuthing of Detective Inspector Bucket and the fate of Jo the crossing-sweeper, these are some of the lives Dickens invokes to portray London society, rich and poor, as no other novelist has done.

'From the Fury of the Northmen deliver us, O Lord.' Between the eighth and eleventh centuries, the Vikings surged from their Scandinavian homeland to trade, raid and invade along the coasts of Europe. Their influence and expeditions extended from Newfoundland to Baghdad, their battles were as far-flung as Africa and the Arctic. But were they great seafarers or desperate outcasts, noble heathens or oafish pirates, the last pagans or the first of the modern Europeans? This concise study puts medieval chronicles, Norse sagas and Muslim accounts alongside more recent research into ritual magic, genetic profiling and climatology. It includes

biographical sketches of some of the most famous Vikings, from Erik Bloodaxe to Saint Olaf, and King Canute to Leif the Lucky. It explains why the Danish king Harald Bluetooth lent his name to a twenty-first century wireless technology; which future saint laughed as she buried foreign ambassadors alive; why so many Icelandic settlers had Irish names; and how the last Viking colony was destroyed by English raiders. Extending beyond the traditional 'Viking age' of most books, *A Brief History of the Vikings* places sudden Scandinavian population movement in a wider historical context. It presents a balanced appraisal of these infamous sea kings, explaining both their swift expansion and its supposed halt. Supposed because, ultimately, the Vikings didn't disappear: they turned into us. *Last Letters from Stalingrad* Praeger Trainingsbuch mit über 100 Übungen zur Verbesserung der sprachlich korrekten Ausdrucksfähigkeit in wichtigen Alltagssituationen, konzipiert für Niveaustufe A1 bis B1.

The Syntax of Conversation in Interlanguage Development Walter de Gruyter

How much of language is motivated? Recently, cognitive and functional linguists have proposed new solutions to this intriguing question. The thirteen articles collected in this volume cover various aspects of motivation in grammar and in the lexicon. The phenomena discussed in the contributions can be grouped into four types of motivation, which, along with other types, are explicated in the introductory chapter: ecological motivation, i.e. motivation of a linguistic unit due to its place, or "ecological niche," within a system; genetic motivation, i.e. motivation of present-day linguistic behavior or structure due to historical factors; experiential motivation, i.e. motivation that is based on embodied experience; and cognitive motivation, i.e. motivation that is based on human knowledge and cognitive operations such as metonymy and metaphor. The languages studied in some detail include Afrikaans, Croatian, Dutch, English, French, German, Hausa, and

Hungarian. This volume makes a strong case for the pervasiveness of motivation in natural language. It will be of interest to teachers, researchers and students of linguistics, especially of functional and cognitive linguistics.

The subject of enthusiastic and widespread reviews, David Lodge's fourteenth work of fiction displays the humor and shrewd observations that have made him a much-loved icon. *Deaf Sentence* tells the story of Desmond Bates, a recently retired linguistics professor in his mid-sixties. Vexed by his encroaching deafness and at loose ends in his personal life, Desmond inadvertently gets involved with a seemingly personable young American female student who seeks his support in matters academic and not so academic, who finally threatens to destabilize his life completely with her unpredictable-and wayward-behavior. What emerges is a funny, moving account of one man's effort to come to terms with aging and mortality-a classic meditation on modern middle age that fans of

David Lodge will love. *The Calendar of Nature* St. Martin's Paperbacks
In this novel the protagonist struggles with almost solipsistic isolation, alternating with a delight in solitude and routine. In narrative form punctuated by diary entries, the author describes in plain, almost prosaic detail these struggles and the ultimately futile attempt Annette makes to escape their cycle. To read Haushofer well requires and enables courage, for her realities are banal and cold, her consolations bleak, hardworn -- and paradoxical, but one is left with a vital sense of affirmation.

Since the celebration of the 100th anniversary of Darwin's *The Language of the Emotions in Man and Animals* (1872), emotionology has become a respectable and even thriving research domain again. The domain of human emotions is most important for mankind, emotions being right in the center of our daily lives and interests. A key-role in the interdisciplinary scientific debate about emotions has now been accorded to

the study of the language of emotions. The present volume offers a new approach to the study of the language of emotions insofar as it presents theories from very different perspectives. It encompasses studies by scholars from diverse disciplines such as linguistics, sociology, and psychology. The topics of the contributions also cover a range of special fields of interest in four major sections. In a first section, a discussion of theoretical issues in the analysis of emotions is presented. The conceptualization of emotions in specific cultures is analyzed in section 2. Section 3 takes a different inroad into the language of emotions by looking at developmental approaches giving evidence of the fact that the acquisition of the language of emotions is a social achievement that simultaneously determines our experience of these emotions. Section 4 is devoted to emotional language in action, that is, the contributions focus upon different types of texts and analyze how emotions are referred to and expressed in discourse.

Find out how it is all done—and "who done it"—along with our intrepid protagonists, Parker and Peele. "What is this stuff?" wondered Parker, and her companion pointed her umbrella to the drawings that plastered the walls. "The raw materials for the best forgeries ever seen" replied her friend. "This is where they were created." Together they examined the drawings, exclaiming softly as they recognized several objects from the Museum. Parker picked up one of the colorful lumps and frowned. "What is this, Peele? It's soft like

clay, but I've never seen these colors before." "No," said her friend, "nor have I—at least in this form. I suspect it requires a catalyst of some type to render it into the false gems—ah, here!" Peele uncovered an array of electric ovens. "Heat—how charming. This must be some type of polymer, which, when brought to the proper temperature, then hardens. I have heard rumors. Could become just about anything, in skilled hands."

For anyone who wants to learn a foreign language, this is the method that will finally make the words stick. "A brilliant and thoroughly modern guide to learning new languages."—Gary Marcus, cognitive psychologist and author of the New York Times bestseller *Guitar Zero* At thirty years old, Gabriel Wyner speaks six languages fluently. He didn't learn them in school—who does? Rather, he learned them in the past few years, working on his own and practicing on the subway, using simple techniques and free online resources—and here he wants to show others what he's discovered. Starting with pronunciation, you'll learn how to rewire your ears and turn foreign sounds into familiar sounds. You'll retrain your tongue to produce those sounds accurately, using tricks from opera singers and actors. Next, you'll begin to tackle words, and connect sounds and spellings to imagery rather than translations,

which will enable you to think in a foreign language. And with the help of sophisticated spaced-repetition techniques, you'll be able to memorize hundreds of words a month in minutes every day. This is brain hacking at its most exciting, taking what we know about neuroscience and linguistics and using it to create the most efficient and enjoyable way to learn a foreign language in the spare minutes of your day.

Language acquisition is a human endeavor par excellence. As children, all human beings learn to understand and speak at least one language: their mother tongue. It is a process that seems to take place without any obvious effort. Second language learning, particularly among adults, causes more difficulty.

The purpose of this series is to compile a collection of high-quality monographs on language acquisition. The series serves the needs of everyone who wants to know more about the problem of language acquisition in general and/or about language acquisition in specific

contexts.
