 Introduction To Parallel Computing Solution
 In the simplest sense, parallel computing is the simultaneous use of multiple compute resources to solve a computational problem: A problem is broken into discrete parts that can be solved concurrently. Each part is further broken down to a series of instructions. Instructions from each part execute simultaneously on different processors. Introduction to Parallel Computing Parallel Computing - It is the use of multiple processing elements simultaneously for solving any problem. Problems are broken down into instructions and are solved concurrently as each resource which has been applied to work is working at the same time. Introduction to Parallel Computing - GeeksforGeeks
 Computer Science i Preface This instructors guide to accompany the text " Introduction to Parallel Computing " contains solutions to selected problems. For some problems the solution has been sketched, and the details have been left out. When solutions to problems are available directly in publications, references have been provided. Solutions to Selected Problems The solutions are password protected and are only available to lecturers at academic institutions. Introduction to Parallel Computing An overview of practical parallel computing and principles will enable the reader to design efficient parallel programs for solving various computational problems on state-of-the-art personal computers and computing clusters. Topics covered range from parallel algorithms, programming tools, OpenMP, MPI and OpenCL, followed by experimental measurements of parallel programs' run-times, and by engineering analysis of obtained results for improved parallel execution performances. The total communication time is $(t_s + t_w)(5 \log q + 2n/q)$ resulting in the parallel run time given by the following equation: $T_P = n^3 p + (t_s + t_w)(5 \log(p n^2) + 2 n^3 p)$ The communication time of this variant of the DNS algorithm depends on the choice of the parallel matrix multiplication algorithm used to multiply the $(n/q) \times (n/q)$ submatrices.
