The study was led by six research questions, and six hypotheses were examined at a significance level of 0.05. The quasi-experimental design was used, notably the non-equivalent control group design for the pretest and posttest. 4,873 senior secondary school students in the Nnewi Education Zone of the state of Anambra make up the study's population. In the study, 2.73 percent of the population was used. A sample of 133 Nnewi Education Zone SS2 computer science students was used. The Computer Studies Department and one knowledgeable computer studies teacher from Nnewi. Kudder-Richardson Formula 20 was used to determine the instrument's reliability. The CSAT was used as a pretest and posttest to gather data. Three weeks

following the post test, the retention test was given. The results demonstrated that a lesson followed by animated media education greatly improved students' computer science performance. When compared to the traditional approach, only tutorials considerably increased students' retention, however, this improvement was not significant when compared to animated media. The study concluded that tutorials are successful at raising students' achievement and retention. The use of animated material in the classroom has been shown to improve student achievement.

Five-year Development Plan, 1990–94 IGI Global Exporting Communication Technology to Developing Countries analyzes the economic, cultural, educational, and political implications of exporting information technology to Africa. Emmanuel K. Ngwainmbi tackles the numerous complexities related to the development of African telecommunications. He not only presents the technological aspects of telecommunications, but

effectively depicts the cultural implications that must be considered. Ngwainmbi investigates and evaluates the history of African telecommunications, clearly showing the path that has led to its present state. He then assesses the potential for development within the countries of Africa upon the influx of technology from the outside world.

Computers in Africa & Telecoms Update Graphic Communications Group A Compendium of Jurisprudential Annotations of Cases with Treaties, Statutes, Rules and Commentaries Daily Graphic Heinemann Educational Books Technology, and particularly the Internet, has caused many changes in the realm of politics. Mainstream media no longer has a monopoly on political commentary as social media, blogs, and user-generated video streaming sites have emerged as an outlet for citizens and political activists to openly voice their opinions, organize political demonstrations,

and network online. The Handbook of Research on Political Activism in the Information Age includes progressive research from more than 39 international experts at universities and research institutions across 15 different countries. Each of the 25 scholarly chapter contributions focus on topics pertaining to the application of information technology, engineering, and mathematics to political activism. Through its analysis of the methods for political activism in the information age, the effectiveness of these methods, as well as emerging analytical tools, this book is designed for use by researchers, activists, political scientists, engineers, computer scientists, journalists, professors, students and professionals working in the fields of politics, e-government, media and communications, and Internet marketing.

MINIMUM STANDARDS FOR NCE TEACHERS.: A summary of minimum standards for N.C.E. teachers IGI Global Many developing countries are waking up to the potential of information technology and the role it can play in

accelerating the pace of development. This book reports on the situation in various countries, looking at the problems and at successful strategies, methodologies and procedures. The papers are organized in three sections. The first includes six papers which discuss a theoretical framework for developing and implementing information systems in a developing country context. The next section of five papers presents the country reports covering many aspects of computerization in these countries. The third section includes five papers which present a regional/comparative status of computer use in selected countries, three papers that deal with framework/specific applications in some sectors, and finally two papers focusing on the software industry and ergonomics.

The role humans play in the field of information technology continues to hold relevance even with the industry's rapid growth. People contribute heavily to the physical,

cognitive, and organizational domain of computing, yet there is a lack of exploration into this phenomenon. Humanoid aspects of technology require extensive research in order to avoid marginalization and insufficient data. The Handbook of Research on the Role of Human Factors in IT Project Management is a collection of innovative research on the methods and applications of the task of human characteristics in the design and development of new technology. While highlighting topics including digitalization, risk management, and task analysis, this book is ideally designed for IT professionals, managers, support executives, project managers, managing directors, academicians, researchers, and students seeking current research on the dynamics of human influence in technological projects. Parliamentary Papers Almanac Foundation Provides definitions of a wide variety of acronyms, initialisms, abbreviations and similar contractions, translating them into their full names or meanings. Terms from subject areas

such as associations, education, the Internet, medicine and others are included.

In today's increasingly interconnected and global society, the protection of basic liberties is an important consideration in public policy and international relations. Profitable social

interactions can begin only when a foundation of trust has been laid between two parties. Human Rights and Ethics: Concepts, Methodologies, Tools, and Applications considers some of the most important issues in the ethics of human interaction, whether in business, politics, or science and technology. Covering issues such as cybercrime, bioethics, medical care, and corporate leadership, this four-volume reference work will serve as a crucial resource for leaders, innovators, educators, and other personnel living and working in the modern world.

Even though digital technologies are ubiquitous in education, assessment methods continue to employ traditional assessments even though they are inadequate to provide information about a student's reasoning and conceptual understanding. Digital-based assessment models allow students to demonstrate higher-order skills while integrating digital technologies as a

powerful teaching tool. Digital technologies can support inquiry-based learning that is essential to developing a deep conceptual understanding of the content. The Handbook of Research on Digital-Based Assessment and Innovative Practices in Education identifies digital tools and applications for effective assessment of learning, shares various models of digital-based assessment in education, and considers best pedagogical practices for assessment in education. Covering a range of topics such as formative assessments, design thinking, virtual reality, and equity, this major reference work is crucial for educational technologists, instructional designers, policymakers, administrators, faculty, researchers, academicians, scholars, practitioners, instructors, and students.
