Progress Without People 9th Cinebook
This book tells two stories. The first and most obvious is why the star known as Sirius has been regarded as an important fixture of the night sky by many civilizations and cultures since the beginnings of history. A second, but related, narrative is the prominent part that Sirius has played in how we came to

achieve our current scientific understanding of the nature and fate of the stars. This is the first book to integrate the cultural history of Sirius with modern astrophysics in a way which provides a realistic view of how science progresses over time.

Publicaciones de la Universidad Autónoma de Santo Domingo Cornell University Press
A provocative discussion of the role of technology and its accompanying rhetoric of limitless progress in the concomitant rise of joblessness and unemployment.

World Science Report 1998 Between the Lines

As the discipline of anthropology continues to chart a course along various turns (ontological, ethical, and otherwise), in this pathbreaking volume Carlo Severi and William Hanks return to the question of knowledge and translation as a theoretical and ethnographic guide for twenty-first century anthropology. Translation has played an important but equivocal role in the history of anthropology and linguistics. At least since Ferdinand de Saussure and

Franz Boas, languages have been seen as systems whose differences make precise translation exceedingly difficult, if not impossible. Others have argued that, in purely abstract terms, translation between languages is in principle indeterminate. This collected volume suggests that the challenge posed by the constant confrontation of incommensurable paradigms, or worlds, may be the most fertile ground for state-of-the-art ethnographic theory and practice. With contributions on topics that range from the philosophical to the ethnographic (with reflections on themes as diverse as tourism in New Guinea, shamanism in the Amazon, the globally ubiquitous restaurant menu, and oral traditions in the Himalayas), this volume provides a new anthropological way to define translation, not only as a key technique for understanding ethnography, but also as a general epistemological principle. "

The Last Intellectuals UNESCO
The Evolution of Scientific Knowledge aims to reach a unique understanding of science with the help of economic and sociological theories. The economic theories used are institutionalist and

evolutionary. The sociological theories draw from the type of work on social studies of science that have, in recent decades, transformed our picture of science and technology.

Translating Worlds Special Issues in Ethnographic Theory

This historical study of intellectuals asks, for every period, who they were, how important they were, and how they saw themselves in relation to other Americans. Lewis Perry considers intellectuals in their varied historical roles as learned gentlemen, as clergymen and public figures, as professionals, as freelance critics, and as a professoriate. Looking at the changing reputation of the intellect itself, Perry examines many forms of anti-intellectualism, showing that some of these were encouraged by intellectuals as surely as by their antagonists. This work is interpretative, critical, and highly provocative, and it provides what is all too often missing in the study of intellectuals—a sense of historical orientation.

Machines as the Measure of Men Springer Nature

This open access book explores ways to

leverage information technology and machine learning to combat disease and promote health, especially in resource-constrained settings. It focuses on digital disease surveillance through the application of machine learning to non-traditional data sources. Developing countries are uniquely prone to large-scale emerging infectious disease outbreaks due to disruption of ecosystems, civil unrest, and poor healthcare infrastructure – and without comprehensive surveillance, delays in outbreak identification, resource deployment, and case management can be catastrophic. In combination with context-informed analytics, students will learn how non-traditional digital disease data sources – including news media, social media, Google Trends, and Google Street View – can fill critical knowledge gaps and help inform on-the-ground decision-making when formal surveillance systems are insufficient.

The Oath of the Five Lords UNESCO

From the creator of Peter Rabbit comes the tale of a serious, well-behaved young black cat, who leads a daring double life defeating vile villains. Beatrix Potter created some of the world's most beloved

characters, and they will be coming to life in a movie slated for Spring 2018. And this book, written in 1941 but never illustrated, introduces the charming Kitty-in-Boots, who has been imagined by Quentin Blake. When Miss Kitty sneaks out to go hunting in her beautiful boots she gets herself into all sorts of scrapes, but on this particular night she meets the foxiest hunter of them all—Mr. Tod! This utterly entertaining tale is filled with mistaken identities, devious villains, and even an appearance from Peter Rabbit.

Leveraging Data Science for Global Health Yale University Press

Twelfth in a series of annual reports comparing business regulation in 189 economies, *Doing Business 2015* measures regulations affecting 10 areas of everyday business activity: Starting a business Dealing with construction permits Getting electricity Registering property Getting credit Protecting minority investors Paying taxes Trading across borders Enforcing contracts Resolving insolvency Labor market regulations This year's report will present data for a second city for the 11 economies with more than 100 million inhabitants. These are

Bangladesh, Brazil, China, India, Indonesia, Japan, Mexico, Nigeria, Pakistan, the Russian Federation, and the United States. Three of the 10 topics covered have been expanded, with further plans to expand on five additional indicators in next year's report. Additionally, the *Doing Business* rankings are now based on the distance to the frontier measure where each economy is evaluated based on how close their business regulations are to the best global practices. This provides a more precise view of each economy's performance and its improvement over time. The report updates all indicators as of June 1, 2014, ranks economies on their overall 'ease of doing business,' and analyzes reforms to business regulation identifying which economies are strengthening their business environment the most. *Doing Business* illustrates how reforms in business regulations are being used to analyze economic outcomes for domestic entrepreneurs and for the wider economy. It is a flagship product produced in partnership by the World Bank and IFC that garners worldwide attention on regulatory barriers to entrepreneurship. More than 60 economies have used the

Doing Business indicators to shape reform agendas and monitor improvements on the ground. In addition, the *Doing Business* data has generated over 2,000 articles in peer-reviewed academic journals since its inception.

The Differentiated Classroom UNESCO Principal Regional Office for Asia & the Pacific

Food safety awareness is at an all time high, new and emerging threats to the food supply are being recognized, and consumers are eating more and more meals prepared outside of the home. Accordingly, retail and foodservice establishments, as well as food producers at all levels of the food production chain, have a growing responsibility to ensure that proper food safety and sanitation practices are followed, thereby, safeguarding the health of their guests and customers. Achieving food safety success in this changing environment requires going beyond traditional training, testing, and inspectional approaches to managing risks. It requires a better understanding of organizational culture and the human dimensions of food safety. To improve the food safety performance of

a retail or foodservice establishment, an organization with thousands of employees, or a local community, you must change the way people do things. You must change their behavior. In fact, simply put, food safety equals behavior. When viewed from these lenses, one of the most common contributing causes of food borne disease is unsafe behavior (such as improper hand washing, cross-contamination, or undercooking food). Thus, to improve food safety, we need to better integrate food science with behavioral science and use a systems-based approach to managing food safety risk. The importance of organizational culture, human behavior, and systems thinking is well documented in the occupational safety and health fields. However, significant contributions to the scientific literature on these topics are noticeably absent in the field of food safety.

Doing Business 2015 Edward Elgar Publishing

Using philosophical and ethnographic theory, presents new approaches to ritual and memory, relating them to visual and sound images as acts of communication.

Sirius UCL Press

This report analyses all aspects of cultural diversity, which has emerged as a key concern of the international community in recent decades, and maps out new approaches to monitoring and shaping the changes that are taking place. It highlights, in particular, the interrelated challenges of cultural diversity and intercultural dialogue and the way in which strong homogenizing forces are matched by persistent diversifying trends. The report proposes a series of ten policy-oriented recommendations, to the attention of States, intergovernmental and non-governmental organizations, international and regional bodies, national institutions and the private sector on how to invest in cultural diversity. Emphasizing the importance of cultural diversity in different areas (languages, education, communication and new media development, and creativity and the marketplace) based on data and examples collected from around the world, the report is also intended for the general public. It proposes a coherent vision of cultural diversity and clarifies how, far from being a threat, it can become

beneficial to the action of the international community.

Pocket Oncology Springer Science & Business Media

This new edition of what has become a standard account of Western expansion and technological dominance includes a new preface by the author that discusses how subsequent developments in gender and race studies, as well as global technology and politics, enter into conversation with his original arguments.

Map Drawn by A Spy ASCD

This volume presents the current state of knowledge on the osseous projectile weaponry that was produced by Pleistocene cultures across the globe. Through cross-cultural and temporal comparison of manufacturing methods, design, use methods, and associated technology, chapters in this volume identify and discuss differences and similarities between these Pleistocene cultures. The central research questions addressed in this volume include: (a) how did osseous weaponry technology develop and change through time and can these changes be tied to environmental and/or social influences?; (b) how did different

Pleistocene cultures design and adapt their osseous weaponry technology to their environment as well as changes in that environment?; and (c) can we identify cultural interaction between neighboring groups through the analysis of osseous weapons technology — and if so — can we use these items to track the movement of peoples and/or ideas across the landscape? Through addressing these three central research questions, this volume creates an integrated understanding of osseous technology during a vital period in Modern Human cultural development which will be useful for students and advanced researchers alike.

Food Safety Culture ASCD

This year's edition of the World Science Report examines the role played by science in resolving the major issues facing human society, such as food security, water resources and disease.

Investing in Cultural Diversity and Intercultural Dialogue Lippincott

Williams & Wilkins

"Collection of articles by Basque writers and American and European academics on the globalization of literature,

postcolonialism, and new ethnic landscapes. Also treats topics such as center and periphery dualities, subaltern identities, so-called borderlands thought, and the effect of Creoleness"--Provided by publisher.

How to Differentiate Instruction in Academically Diverse Classrooms Center for Basque Studies Press

All Yesterdays is a book about the way we see dinosaurs and other prehistoric animals. Lavishly illustrated with over sixty original artworks, All Yesterdays aims to challenge our notions of how prehistoric animals looked and behaved. As a critical exploration of palaeontological art, All Yesterdays asks questions about what is probable, what is possible, and what is commonly ignored. Written by palaeozoologist Darren Naish, and palaeontological artists John Conway and C.M. Kosemen, All Yesterdays is scientifically rigorous and artistically imaginative in its approach to fossils of the past - and those of the future.

Towards Knowledge Societies Hau

Annotation Telematic Embrace combines a provocative collection of writings from

1964 to the present by the preeminent artist and art theoretician Roy Ascott, with a critical essay by Edward Shanken that situates Ascott's work within a history of ideas in art, technology, and philosophy. *Osseous Projectile Weaponry* World Bank Publications

Offers a definition of differentiated instruction, and provides principles and strategies designed to help teachers create learning environments that address the different learning styles, interests, and readiness levels found in a typical mixed-ability classroom.

Lifelong Learning in the South Springer

The author, a modern Catholic writer-philosopher, sets forth his views on Christian education.

Intercultural Education University of Chicago Press

Urges governments to expand quality education for all, increase community access to information and communication technology, and improve cross-border scientific knowledge-sharing, in an effort to narrow the digital and "knowledge" divides between the North and South and move towards a "smart" form of sustainable human development.
