 This book
 traces the
 origins of a
 faith--perhaps
 the faith of
 the century.

Modern
 revolutionarie
 s are
 believers, no
 less
 committed
 and intense
 than were
 Christians or

Muslims of an earlier era. What is new is the belief that a perfect secular order will emerge from forcible overthrow of traditional authority. This inherently implausible idea energized Europe in the nineteenth century, and became the most pronounced ideological export of the West to the rest of the world in the twentieth century. Billington is interested in revolutionaries--the innovative

creators of a new tradition. His historical frame extends from the waning of the French Revolution in the late eighteenth century to the beginnings of the Russian Revolution in the early twentieth century. The theater was Europe of the industrial era; the main stage was the journalistic offices within great cities such as Paris, Berlin, London, and St. Petersburg. Billington claims with

considerable evidence that revolutionary ideologies were shaped as much by the occultism and proto-romanticism of Germany as the critical rationalism of the French Enlightenment. The conversion of social theory to political practice was essentially the work of three Russian revolutions: in 1905, March 1917, and November 1917. Events in the outer rim of the European world brought discussions

about revolution out of the school rooms and press rooms of Paris and Berlin into the halls of power. Despite his hard realism about the adverse practical consequences of revolutionary dogma, Billington appreciates the identity of its best sponsors, people who preached social justice transcending traditional national, ethnic, and gender boundaries. When this book originally appeared The New Republic hailed it as "remarkable, learned and lively," while The New Yorker noted that Billington "pays great attention to the lives and emotions of individuals and this makes his book absorbing." It is an invaluable work of history and contribution to our understanding of political life. *Handbook of Clinical Neurology* Transaction Publishers

A powerful and impassioned historical account of the largest successful revolt by enslaved people in history: the Haitian Revolution of 1791-1803 "One of the seminal texts about the history of slavery and abolition.... Provocative and empowering." —The New York Times Book Review The Black Jacobins, by Trinidadian historian C. L. R. James, was the first major

analysis of the uprising that began in the wake of the storming of the Bastille in France and became the model for liberation movements from Africa to Cuba. It is the story of the French colony of San Domingo, a place where the brutality of plantation owners toward enslaved people was horrifyingly severe. And it is the story of a charismatic and barely literate enslaved person named Toussaint

L'Ouverture, who successfully led the Black people of San Domingo against successive invasions by overwhelming French, Spanish, and English forces—and in the process helped form the first independent post-colonial nation in the Caribbean. With a new introduction (2023) by Professor David Scott. *Diabetes Literature Index* JHU Press Includes section,

management of pediatric disorders. Reflects a family-centered care model throughout to help you understand how to involve children and their caregivers in developing and implementing intervention plans. Emphasizes an evidence-based approach that incorporates the latest research for the best outcomes. Follows the practice pattern guidelines of	the Guide to Physical Therapist Practice, 2nd Edition which sets the standard for physical therapy practice. Features the International Classification of Function, Disability, and Health (ICF) of the World Health Organization (WHO) as the model for the disabling process, emphasizing activity rather than functional limitations and participation rather than disability in keeping with	the book's focus on prevention of disability. Provides extensive case studies that show the practical application of material covered in the text and are often accompanied by online video clips illustrating the condition and its management. Makes it easy to access key information with plenty of tables and boxes that organize and summarize important points. Clearly demonstrates
--	--	---

important concepts and clinical conditions you'll encounter in practice with over 800 illustrations. Takes learning to a deeper level with additional resources on the Evolve website featuring: Over 40 video clips that correspond to case studies and demonstrate conditions found in each chapter. Helpful resources, including web links. Questions and exercises

you'll find helpful when preparing for the pediatric specialist certification exam. [Medical Journal of Australia](#) Vintage. Most studies on reading have been conducted with English-speaking subjects. It is crucial to also examine studies conducted in different languages, in order to highlight which aspects of reading acquisition and dyslexia appear to be language-

specific, and which are universal. [Reading Acquisition and Developmental Dyslexia](#) sheds new light on dyslexia and its relationship with reading acquisition, presenting two unique advancements in this area. Looking at studies conducted in different languages, the prerequisites of reading acquisition are examined, and the findings from studies of skilled adult

readers are presented. The manifestations of developmental dyslexia and the main contemporary explanations for it are outlined, providing an in-depth, well researched discussion of the topic. The authors conclude by offering a new framework which could explain both reading acquisition and developmental dyslexia. A fascinating book offering a unique insight into

the topic of dyslexia, it will be of great interest to students and lecturers in cognitive psychology, educational psychology, and psycholinguistics, as well as those with a more everyday involvement with the disorder such as speech and language therapists. [Pathophysiology for the Health Professions - E- Book](#) Indiana University Press A concise, easy-to-

understand introduction to the fundamentals, Pathophysiology for the Health Professions, 4th Edition helps you learn to identify disease processes and disorders. Authors Barbara Gould and Ruthanna Dyer continue the tradition of a text known for its readability and vivid, full-color illustrations, updated with the latest research and clinical advances. Unique

Challenge, Think About, and Emergency Treatment features help in applying the material to real-life situations. No matter which area in the healthcare field you may enter, this book provides essential preparation for conditions encountered in clinical practice. Concise and readable approach includes the information students need without overwhelming them, even if they have a

limited scientific background. Unique Challenge feature asks "What can go wrong with this structure or system?" as a way to help students facilitate progress by using previously learned knowledge. Unique Think About boxes help with self-evaluation, test preparation, and review. Unique Emergency Treatment boxes list basic emergency measures;

these can be modified to fit specific professions, established protocols, or practice settings. Research boxes discuss new developments, problem areas of pathophysiology, and complications associated with research. Warning Signs boxes summarize conditions that may develop in patients. Diagnostic tests and treatments are included for each of the major

disorders. Case studies in each chapter provide a basis for discussion or can be used as an assignment. Study questions offer a self-assessment on the material in each chapter. Ready References in the appendix provide a quick lookup for anatomic terms, conversion tables, abbreviations and acronyms, diagnostic studies and tests, and more. A	companion Evolve website includes web links, learning activities, content updates, and more. New content on the causes and trends related to disease, new drugs, technology, and treatment. Coverage of obesity and its complications, including an in-depth discussion of metabolic syndrome. Multiple disorder syndromes in the aged client. DNA, genetics and the Human	Genome Project with current research on protein pathways in health (proteomics) and the implications for drug treatment and disease causation. Coverage of autism. Updated content on the H1N1 virus and communicable diseases; HIV, cancer causation, and immunology; and substance abuse to reflect common practices in the use of illicit (street)
--	--	---

drugs as well as abuse of prescription medications. Case studies revised to emphasize chronic diseases, prevention, and acute care, and to apply to a wider range of health professions. Appendices reorganized for improved reference and lookup.

Rabelais and His World

Elsevier
Health Sciences
This classic work by the Russian philosopher and literary theorist

Mikhail Bakhtin (1895-1975) examines popular humor and folk culture in the Middle Ages and the Renaissance. One of the essential texts of a theorist who is rapidly becoming a major reference in contemporary thought, Rabelais and His World is essential reading for anyone interested in problems of language and text and in cultural interpretation.

A major work by one of the more innovative thinkers of our time, Politics of Nature does nothing less than establish the conceptual context for political ecology--transplanting the terms of ecology into more fertile philosophical soil than its proponents have thus far

envisioned. Bruno Latour announces his project dramatically: "Political ecology has nothing whatsoever to do with nature, this jumble of Greek philosophy, French Cartesianism and American parks." Nature, he asserts, far from being an obvious domain of reality, is a way of assembling political order without due process. Thus, his book proposes an end to the old dichotomy between nature and society--and the constitution, in its place, of a collective, a community incorporating humans and nonhumans and building on the experiences of the sciences as they are actually practiced. In a critique of the distinction between fact and value, Latour suggests a redescription of the type of political philosophy implicated in such a "commonsens e" division-- which here reveals itself as distinctly uncommonsensual and in fact fatal to democracy and to a healthy development of the sciences. Moving beyond the modernist institutions of "mononaturalism" and "multiculturalism," Latour develops the idea of "multinaturalism," a complex collectivity determined not by outside experts claiming absolute reason but by

<p>"diplomats" who are flexible and open to experimentation. Table of Contents: Introduction: What Is to Be Done with Political Ecology? 1. of the Professions to the Procedures of the Houses The Work of the Houses The Common Dwelling, the Oikos 5. Exploring Common Worlds Time's Two Arrows The Learning Curve The Third Power and the Question of the State The Exercise of Diplomacy War and Peace for the Sciences Conclusion: What Is to Be Done? Political Ecology! Summary of the Argument (for Readers in	a Hurry...) Glossary Notes Bibliography Index From the book: What is to be done with political ecology? Nothing. What is to be done? Political ecology! All those who have hoped that the politics of nature would bring about a renewal of public life have asked the first question, while noting the stagnation of the so- called "green" movements. They would like very much	to know why so promising an endeavor has so often come to naught. Appearances notwithstandi ng, everyone is bound to answer the second question the same way. We have no choice: politics does not fall neatly on one side of a divide and nature on the other. From the time the term "politics" was invented, every type of politics has been defined by its relation to nature, whose every feature,
---	--	--

property, and function depends on the polemical will to limit, reform, establish, short-circuit, or enlighten public life. As a result, we cannot choose whether to engage in it surreptitiously, by distinguishing between questions of nature and questions of politics, or explicitly, by treating those two sets of questions as a single issue that arises for all collectives. While the ecology movements

tell us that nature is rapidly invading politics, we shall have to imagine - most often aligning ourselves with these movements but sometimes against them - what a politics finally freed from the sword of Damocles we call nature might be like. **Encyclopedia of Caves and Karst Science** Psychology Press The Encyclopedia of Caves and Karst Science

contains 350 alphabetically arranged entries. The topics include cave and karst geoscience, cave archaeology and human use of caves, art in caves, hydrology and groundwater, cave and karst history, and conservation and management. The Encyclopedia is extensively illustrated with photographs, maps, diagrams, and tables, and has thematic content lists and a comprehensive

e index to facilitate searching and browsing.

Rock Island Lines News Digest

Princeton University Press
Paul John Eakin's earlier work *Fictions* in *Autobiography* is a key text in autobiography studies. In it he proposed that the self that finds expression in autobiography is in fundamental ways a kind of fictive construct, a fiction articulated in a fiction. In this new book

Eakin turns his attention to what he sees as the defining assumption of autobiography : that the story of the self does refer to a world of biographical and historical fact. Here he shows that people write autobiography not in some private realm of the autonomous self but rather in strenuous engagement with the pressures that life in culture entails. In so demonstrating , he offers fresh readings of

autobiographies by Roland Barthes, Nathalie Sarraute, William Maxwell, Henry James, Ronald Fraser, Richard Rodriguez, Henry Adams, Patricia Hampl, John Updike, James McConkey, and Lillian Hellman. In the introduction Eakin makes a case for reopening the file on reference in autobiography , and in the first chapter he establishes the complexity of the referential

aesthetic of the genre, the intricate interplay of fact and fiction in such texts. In subsequent chapters he explores some of the major contexts of reference in autobiography : the biographical, the social and cultural, the historical, and finally, underlying all the rest, the somatic and temporal dimensions of the lived experience of identity. In his discussion of contemporary theories of the self, Eakin

draws especially on cultural anthropology and developmental psychology. *APMIS*. Oxford University Press, USA
By browsing about 10 000 000 scientific articles of over 200 major journals some 200 000 publications were selected. The extracted data is part of the following material research fields: crystal structures (S), phase diagrams (C) and intrinsic physical properties (P). These

research field codes as well as the chemical systems investigated in each publication were included in the present work. The aim of this Bibliography is to provide researchers with a comprehensive compilation of all up to now published scientific publications on inorganic systems in only three handy volumes. Elsevier Health Sciences Each book in this series is prepared by senior medical students or junior doctors under faculty supervision to give them the correct level of information perfectly tailored to current curricula requirements. The series now includes improved pedagogic features and a fully revised self-assessment section.

Suggestive Therapeutics

Raven Press (ID)

Vols. for 1964- have guides and journal lists.

Advances in Neurology

Walter de Gruyter The effective use of educational assessments is fundamental to improving learning. However, effective use does not refer only to the technical parameters or statistical methodologies . Learning assessments in use todaywhether large-scale or household surveys or hybrid

(smaller, quicker, cheaper or SQC)have varied uses and purposes. The present volume provides a review of learning assessments, their status in terms of the empirical knowledge base, and some new ideas for improving their effectiveness, particularly for those children most in need. It is argued here that SQC learning assessments have the potential to enhance

educational accountability, increase transparency, and support a greater engagement of stakeholders with an interest in improving learning. In addition, countries need a sustained policy to guide assessment choices, including a focus on poor and marginalized populations.

A System of Medicine

Jacques Derrida's revolutionary theories about deconstructio

n, phenomenology, psychoanalysis, and structuralism, first voiced in the 1960s, forever changed the face of European and American criticism. The ideas in *De la grammatologie* sparked lively debates in intellectual circles that included students of literature, philosophy, and the humanities, inspiring these students to ask questions of their disciplines that had

previously been considered improper. Thirty years later, the immense influence of Derrida's work is still igniting controversy, thanks in part to Gayatri Spivak's translation, which captures the richness and complexity of the original. This corrected edition adds a new index of the critics and philosophers cited in the text and makes one of contemporary criticism's most indispensable

works even more accessible and usable.

Psychopharmacology, a Review of Progress, 1957-1967

A collection of invited papers from a Muscular Dystrophy Association

sponsored symposium which highlight findings and theories on the molecular genetics of these diseases, assess concepts on immune-mediated

motor neuron destruction and examine the pathogenesis of motor neuron disease.
