This memoir summarizes the current knowledge of New Caledonia's geology, geodynamic evolution, and mineral resources, based on published and unpublished information. It comprises 10 research papers, each addressing a particular geological assemblage or topic. After an introductory chapter, and a review of the published geodynamic models of evolution of the SW Pacific, chapters 3 to 5 focus on the main geological assemblages of Grande Terre: the Pre-Late Cretaceous basement

terranes, the Late Cretaceous to Eocene cover, and the Eocene subduction-obduction complex, one of the largest and best-preserved in the world. Chapter 6 is devoted to the Loyalty Islands and Ridge. Chapter 7 deals with the mostly terrestrial post-obduction units including regolith. Chapter 8 deals with palaeobiogeography and discuss plausible scenarios of biotic evolution. Chapters 9 and 10 provide an comprehensive review of New Caledonia's mineral resources. The volume will interest stratigraphers, sedimentologists, marine geologists, palaeontologists, palaeogeographers, igneous and metamorphic petrologists, geochemists, geochronologists, and specialists in tectonics, geodynamic evolution, regolith, ophiolites, and economic geology.

Themes in the Historical Geography of France compiles several selected themes in the historical geography of France. This book discusses the practice of historical geography in France; peopling and the origins of settlement; early urban development; and retreat of rural settlement. The regional contrasts in agrarian structure; reclamation of coastal marshland; petite culture on 1750-1850; and reclamation of wasteland during the 18th and 19th centuries are also elaborated. This compilation likewise covers the historical geography of Western France; urban growth on 1500-1900; and agricultural change and industrial development in the 18th and 19th centuries. This publication is beneficial to historians and geographers aiming to acquire knowledge of the historical geography of France.

This volume comprises selected papers of the international

symposium held in Sio Paulo, 1986. The papers deal with a range of topics from quaternary vertebrate palaeontology in Argentina and biostratigraphy of uppermost Cenozoic in the Pampean area to taxonomy, palaeoecology and palaeoenvironments.

*Revue des cours scientifique de la France et de l'étranger* Elsevier Dans La Splendeur des dieux, Gaëlle Tallet aborde la question de la transformation des divinités égyptiennes à l'époque gréco-romaine et de l'hellénisation de leur iconographie en interrogeant les enjeux de l'élaboration d'un hellénisme proprement égyptien, et les stratégies qu'il recouvre. In La Splendeur des dieux, Gaëlle Tallet provides a full reappraisal of the transformation of Egyptian deities and of their Hellenized depiction in Graeco-Roman times, and questions the issues and strategies at stake behind the elaboration of an Egyptian Hellenicity.
