Rethinking Surveillance and Control

marixverlag

Although a number of edited collections deal with either the languages of the world or the languages of particular regions or genetic families, only a few cover sign languages or even include a substantial amount of information on them. This handbook provides

information on some 38 sign languages, including basic facts about each of the languages, structural aspects, history and culture of the Deaf communities, and history of research. This information will be of interest not just to general audiences, including those who are deaf, but also to linguists and students of linguistics. By providing information on sign languages in a manner accessible to a less specialist audience, this volume fills an important gap in the literature. Jesus and Judaism Scholastic Inc.

Contains 91 autobiographies of medical women from 27 countries born between 1878 and 1911. Emphasis is on what motivated the women to become physicians.

Neue Folge 59. Jahrgang 2007 Harvard University Press

The period of 1965 to 1978 was an extremely productive time for U.S. (Russian born) Romance etymologist and philologist Yakov Malkiel whose specialty was the development of Latin words, roots, prefixes, and suffixes in modern Romance languages, particularly Spanish. Malkiel will be known as the great champion of etymology in linguistics as evidenced by several of the selected essays in *From Particular to General Linguistics*. But here Malkiel also moves in several other subfields of

linguistics and proves that whatever the subject of discussion is, it is characterized by a tenaciously comprehensive use of evidence.

Organizing Scientific Meetings

Walter de Gruyter GmbH & Co KG
History, Metaphors, and Fables collects the central writings by Hans Blumenberg and covers topics such as on the philosophy of language, metaphor theory, non-conceptuality, aesthetics, politics, and literary studies. This landmark volume demonstrates Blumenberg's intellectual breadth and gives an overview of his thematic and stylistic range over four decades. Blumenberg's early philosophy of technology becomes tangible, as does his critique of linguistic perfectibility and conceptual thought, his theory of history

as successive concepts of reality", his anthropology, or his studies of literature. History, Metaphors, Fables allows readers to discover a master thinker whose role in the German intellectual post-war scene can hardly be overestimated.

No Spiritual Investment in the World

Walter de Gruyter GmbH & Co KG

This book works from the premise that the widespread belief that increased security leads to a loss of privacy is conceptually misconceived and conceals key aspects of surveillance measures. Its authors emphasise the symbiotic relationship between freedom and security, and reveal the hollowness of both concepts as soon as they are examined as separate entities and outside concrete power relations. By

further contextualising risks and surveillance practices, they also demonstrate the value of privacy and data protection. By presenting a kaleidoscope of perspectives, which ranges from critical studies to international relations, law, philosophy and sociology, the book elucidates that surveillance technology in no way implies increased security and less privacy, and vice versa that the protection of privacy does not only have to come at the expense of security.

Visio Pacis Holy City and Grail John Benjamins Publishing

This volume explores the tremendous influence of Plato's Phaedrus on the philosophical, religious, scientific and literary discussions in the West. Ranging from Plato's first readers, over the

Church Fathers and the Platonic commentators, to Byzantine and Renaissance thinkers, the papers collected here introduce the reader to the first two millennia of the dialogue's reception history. Thirteen contributions by both junior and established scholars study the engagement with the Phaedrus by such major figures as Aristotle, Galen, Origen, Clemens of Alexandria, Plotinus, Augustine, Proclus, Psellus, Ficino, Erasmus, and many others. Together, they cover the wide range of topics discussed in the dialogue: the value of myth and allegory, religion and theology, love and beauty, the soul and its immortality, teaching and learning, metaphysics and epistemology, rhetoric and dialectic, as well as the role and the limits of writing.

By placing the dialogue in this broad perspective, the volume will appeal to readers interested in the Phaedrus itself, as well as to classicists, literary theorists, and historians of philosophy, science and religion concerned with the dialogue's reception history and its main protagonists.

Antisemitism BoD – Books on Demand Barash and Lipton discuss the theories scientists have advanced to explain evolutionary enigmas--from how women get their curves to why women menstruate--and present hypotheses of their own.

Mesopotamia Cornell University Press Now available in a new edition, this chronologically arranged volume covers a century and a half of masterpieces which beautifully capture the

development of art in the modern age. Now available in a new edition, this chronologically arranged volume covers a century and a half of masterpieces which beautifully capture the development of art in the modern age. Starting with James Abbott McNeill Whistler and ending with Matthew Barney, nearly every prominent figure in Modern art is represented in vibrant double-page spreads that show how these artists redefined norms and challenged tradition. Fascinating biographical and anecdotal information about each artist is provided alongside large reproductions of their most celebrated works, stunning details, and images of the artists themselves. From the Impressionists to the Surrealists, Cubists to Pop artists—readers will find a

wealth of information as well as hours of enjoyment learning about one of the most popular and prolific periods in art history.

Theology and Practice in Early Christianity

Univ of California Press

A unique work of fiction from the troubled streets of Ukraine, giving invaluable testimony to the new history unfolding in the nation's post-independence years "One of the most astounding novels to come out of modern Ukraine. Mesopotamia is seductive, twisted, brilliant, and fierce."-- Gary Shteyngart, author of *Little Failure* and *Absurdistan* This captivating book is Serhiy Zhadan's ode to Kharkiv, the traditionally Russian-speaking city in Eastern Ukraine where he makes his home. A leader among Ukrainian

post-independence authors, Zhadan employs both prose and poetry to address the disillusionment, complications, and complexities that have marked Ukrainian life in the decades following the Soviet Union's collapse. His novel provides an extraordinary depiction of the lives of working-class Ukrainians struggling against an implacable fate: the road forward seems blocked at every turn by demagogic forces and remnants of the Russian past. Zhadan's nine interconnected stories and accompanying poems are set in a city both representative and unusual, and his characters are simultaneously familiar and strange. Following a kind of magical-realist logic, his stories expose the grit and burden of stalled lives, the universal

desire for intimacy, and a wistful realization of the off-kilter and even perverse nature of love.

50 Modern Artists You Should Know

Walter de Gruyter GmbH & Co KG

The old philosophical discipline of metaphysics – after having been pronounced dead by many – has enjoyed a significant revival within the last thirty years, due to the application of the methods of analytic philosophy. One of the major contributors to this revival is the outstanding American metaphysician Peter van Inwagen. This volume brings together twenty-two scholars, who, in commemoration of Prof. van Inwagen's 75th birthday, ponder the future prospects of metaphysics in all the richness to which it has now returned. It is only natural that logical and

epistemological reflections on the significance of metaphysics – sometimes called “meta-metaphysics” – play a considerable role in most of these papers. The volume is further enriched by an interview with Peter van Inwagen himself.

Quo Vadis, Metaphysics? Hemisphere Pub

Throughout the twentieth century, German writers, philosophers, theologians, and historians turned to Gnosticism to make sense of the modern condition. While some saw this ancient Christian heresy as a way to rethink modernity, most German intellectuals questioned Gnosticism's return in a contemporary setting. In *No Spiritual Investment in the World*, Willem Styfhals explores the Gnostic worldview's

enigmatic place in these discourses on modernity, presenting a comprehensive intellectual history of Gnosticism's role in postwar German thought. Establishing the German-Jewish philosopher Jacob Taubes at the nexus of the debate, Styfhals traces how such figures as Hans Blumenberg, Hans Jonas, Eric Voegelin, Odo Marquard, and Gershom Scholem contended with Gnosticism and its tenets on evil and divine absence as metaphorical detours to address issues of cultural crisis, nihilism, and the legitimacy of the modern world. These concerns, he argues, centered on the difficulty of spiritual engagement in a world from which the divine has withdrawn. Reading Gnosticism against the backdrop of postwar German debates about secularization, political

theology, and post-secularism, No Spiritual Investment in the World sheds new light on the historical contours of postwar German philosophy.

Icons of Architecture Mohr Siebeck

This volume presents an array of the worlds greatest sculptures, giving you all the ammunition you need to sound like an expert.

Heidegger Geological Society of London
The fifty design masterpieces presented here in chronological order represent the most compelling and intriguing designs of the Bauhaus movement. Includes works by Kandinsky, Klee, Albers and Moholy-Nagy, plus, many more.

New Approaches to Scientific Realism
Penguin UK

Rund 1,8 Mio. Tier- und Pflanzenarten sind bisher wissenschaftlich erfasst,

etwa weitere 20 Mio. Arten warten in der Tiefsee und in den tropischen Wäldern auf ihre Entdeckung. Die größten bekannten Lebewesen werden weit über 100 Meter hoch, die kleinsten bestehen nur aus einer einzigen Zelle und sind mit dem bloßen Auge nicht mehr zu erkennen. Manche erreichen ein Alter von mehreren tausend Jahren, andere leben nicht einmal einen einzigen Tag. Dieser Band folgt in 54 anschaulichen Porträts den Spuren der Frauen und Männer, die es sich zur Aufgabe gemacht haben, diese ungeheure Vielfalt des Lebens zu erforschen und verstehen zu lernen. Was auf den ersten Blick so beneidenswert faszinierend wirkt, ist das Ergebnis von harter und oftmals entbehrungsreicher Arbeit. Wie Biologen denken und arbeiten und auf welch

verschlungenen Pfaden sie schließlich zu ihren epochalen Erkenntnissen gekommen sind, schildert dieses Buch. Über Aristoteles, Carl von Linné, Charles Darwin und Ernst Haeckel spannt sich der Bogen bis zu Dian Fossey und Jane Goodall. Vorstellung von 54 bedeutenden Biologen und ihrer Arbeit

Experiments in Ethics Communication, Sport, and Society

The first two decades of the twenty-first century witnessed a rapid change in Western societal acceptance of homosexual activity. This change, however, remains fundamentally unstable unless founded upon an adequate moral theory. Today many within the Western world assume that any argument against homosexual activity must be founded upon religious

premises. This book questions that narrative; for the history of philosophical thought manifests a strong non-religious consensus against such practices. This book bridges the gap within current philosophical scholarship by painstakingly examining the non-religious argument as found within the great philosopher Thomas Aquinas. In the process the author advances a novel claim: the traditional account against homosexual activity also applies to untruthful assertive speech acts. Lying and homosexual activity are both wrong for mutually illuminating reasons.

The Reception of Plato's ›Phaedrus‹ from Antiquity to the Renaissance

Prestel Publishing

Dealing with virtually all aspects of scientific meetings, August Epple gives

invaluable guidance for prospective organizers. He covers events from local afternoon Symposia to International Congresses with more than 1000 participants. He also provides insights for the tourist industry into the specific requirements that make scientific meetings different from others. The author gets straight to the point, identifying common problems and offering solutions. In twenty chapters and an extensive appendix, attention is given to critical details such as selection of the meeting site and timing of the event; stepwise program development; the selection of speakers and other key participants; social functions; budget matters; fund raising; the design of forms and brochures; publication of proceedings. If you are organizing a

scientific meeting this is your indispensable guide.

Helen Adolf Festschrift Prestel Publishing
"Examines the life, deeds, and teachings of Jesus of Nazareth against the backdrop of first-century Palestine"--
Directory of American Scholars Mohr Siebeck

The book discusses this long-standing relationship from a historical point of view, which in the past has been sometimes indifferent, sometimes fruitful and sometimes full of conflict. The relationship continues well into the present. While Christian fundamentalists attack evolution and related palaeontological findings as well as the geological evidence of the age of the Earth, mainstream theologians strive for a fruitful dialogue between science and

religion. Much of what is written and discussed today can only be understood, when the historical perspective is added. This book considers the following topics: the development of geology from mythological approaches towards the European Enlightenment, Biblical or Geological Flood and the age of the Earth, geology within 'religious' organizations, biographical case studies of geological clerics and religious geologists, religion and evolution, historical aspects of creationism and its motives.

Landscape Springer Nature

*****2019 NATIONAL JEWISH BOOK AWARD WINNER—Jewish Education and Identity Award***** The award-winning author of *The Eichmann Trial and Denial*:

Holocaust History on Trial gives us a penetrating and provocative analysis of the hate that will not die, focusing on its current, virulent incarnations on both the political right and left: from white supremacist demonstrators in Charlottesville, Virginia, to mainstream enablers of antisemitism such as Donald Trump and Jeremy Corbyn, to a gay pride march in Chicago that expelled a group of women for carrying a Star of David banner. Over the last decade there has been a noticeable uptick in antisemitic rhetoric and incidents by left-wing groups targeting Jewish students and Jewish organizations on American college campuses. And the reemergence of the white nationalist movement in America, complete with Nazi slogans and imagery, has been reminiscent of the

horrific fascist displays of the 1930s. Throughout Europe, Jews have been attacked by terrorists, and some have been murdered. Where is all this hatred coming from? Is there any significant difference between left-wing and right-wing antisemitism? What role has the anti-Zionist movement played? And what can be done to combat the latest manifestations of an ancient hatred? In a series of letters to an imagined college student and imagined colleague, both of whom are perplexed by this resurgence, acclaimed historian Deborah Lipstadt gives us her own superbly reasoned, brilliantly argued, and certain to be controversial responses to these

troubling questions.

Computational Intelligence Yale University Press

Computational intelligence (CI) lies at the interface between engineering and computer science; control engineering, where problems are solved using computer-assisted methods. Thus, it can be regarded as an indispensable basis for all artificial intelligence (AI) activities. This book collects surveys of most recent theoretical approaches focusing on fuzzy systems, neurocomputing, and nature inspired algorithms. It also presents surveys of up-to-date research and application with special focus on fuzzy systems as well as on applications in life sciences and neuronal computing.
