Jay Maisel, hailed as one of the most brilliant, gifted photographers of all time, is much more than that. He is a mentor, teacher, and trailblazer to many photographers, and a hero to those who feel Jay's teaching has changed the way they see and create their own photography. He is a living legend whose work is studied around the world, and whose teaching style and presentation garner standing ovations and critical acclaim every time he takes the stage. Now, for the first time ever, Jay puts his amazing insights and learning moments from a lifetime behind the lens into a book that communicates the three most important aspects of street photography: light, gesture, and color. Each page unveils something new and challenges you to rethink everything you know about the bigger picture of photography. This isn't a book about f-stops or ISOs. It's about seeing. It's about being surrounded by the ordinary and learning how to find the extraordinary. It's about training your mind, and your eyes, to see and capture the world in a way that delights, engages, and captivates your viewers, and there is nobody that communicates this, visually or through the written word, like Jay Maisel. *Light, Gesture & Color* is the seminal work of one of the true photographic geniuses of our time, and it can be your key to opening another level of understanding, appreciation, wonder, and creativity as you learn to express yourself, and your view of the world, through your camera. If you're ready to break through the barriers that have held your photography back and that have kept you from making the types of images you've always dreamed of, and you're ready to learn what photography is really about, you're holding the key in your hands at this very moment.

This timely new book outlines a whole-school approach to embedding a sustainable model of teaching and learning that puts the learner at the heart of the system. It provides an entire framework for ensuring all students achieve above their expectations; incorporating school vision, teacher professional development, assessment models, school culture, leadership and management, and core classroom practices. It takes what the current research suggests does – and does not – work and builds it into a practical approach that has been tried, tested and proven to work. Each section incorporates the research, a model of how this can be embedded across a school and then a training section that allows senior leaders in schools to teach the skill-set to others to ensure it can be embedded and reviewed. Covering all aspect of teaching and learning including curriculum design, teacher practices, assessment and leadership, the book features: a clear planning framework that is easy to implement; subject based case studies to exemplify good practice; diagrams to clarify and consolidate information; training activities throughout each chapter, also available to download at www.routledge.com/9780415831178. Woodpeckers of North America BRILL

It was one of the biggest crime stories of the decade - two deadly killers, desperate and on the run. After months of planning, Ricky Matt and David Sweat cut, chopped, coerced, and connived their way out of a maximum-security prison in the wilderness of upstate New York and managed to elude police for three weeks, sending the region into lockdown and keeping the entire country on edge. The media called it "a bold escape for the ages," and veteran true-crime writer Michael Benson leads us along the story's every wild path to dig out a tale of adventure, psychology, sex, and brutality. *Escape from Dannemora* examines the strange case of Joyce Mitchell, the long-time prison employee who had a sexual relationship with at least one of the killers, and who smuggled them tools and

aided in the escape, while they cooked up a plan to kill her husband. In the end, Benson looks closely at conditions at the Clinton Correctional Facility in Dannemora, NY, a crumbling Gothic pile now under investigation for charges of drug trafficking and brutality.

Microcontroller Programming CRC Press

From cell phones and television remote controls to automobile engines and spacecraft, microcontrollers are everywhere. Programming these prolific devices is a much more involved and integrated task than it is for general-purpose microprocessors; microcontroller programmers must be fluent in application development, systems programming, and I/O operation as well as memory management and system timing. Using the popular and pervasive mid-range 8-bit Microchip PIC® as an archetype, Microcontroller Programming offers a self-contained presentation of the multidisciplinary tools needed to design and implement modern embedded systems and microcontrollers. The authors begin with basic electronics, number systems, and data concepts followed by digital logic, arithmetic, conversions, circuits, and circuit components to build a firm background in the computer science and electronics fundamentals involved in programming microcontrollers. For the remainder of the book, they focus on PIC architecture and programming tools and work systematically through programming various functions, modules, and devices. Helpful appendices supply the full mid-range PIC instruction set as well as additional programming solutions, a guide to resistor color codes, and a concise method for building custom circuit boards. Providing just the right mix of theory and practical guidance, Microcontroller Programming: The Microchip PIC® is the ideal tool for any amateur or professional designing and implementing stand-

alone systems for a wide variety of applications.

Owls of the North The Museum of Modern Art

Set towards the end of the 'Swinging Sixties, the setting for this gripping and authentic crime mystery is the North-West town of Monkston. A small town that has been effectively policed for 150 years by its dedicated local Police Force. In 1967 the town is rocked by the disappearance of a young teenage girl from the town centre. There are strong similarities to the disappearance of another teenage girl in 1959. She was found murdered in a local park and no-one was ever arrested. As a young constable in uniform Steve Miller was involved in the search for her. Eight years later, Miller is a Detective Sergeant in the town's CID, known locally as 'The Jacks'. He is leading the initial search for the missing teenager and wonders if history is repeating itself. This is a time before modern aids to criminal detection such as CCTV, Camera Phones and 24 hour rolling news. As Miller and his team painstakingly pursue their enquiries, they uncover other crimes, but find that they are being misled by the subterfuge of some who should be assisting in their investigation, not impeding it. As the investigation progresses suspicion falls on the missing girl's own father and even a serving detective comes under the microscope. If you enjoyed television dramas such as Broadchurch and Happy Valley, you will love this story. The author's attention to detail will have you believing that you are reading fact, not fiction. Look out for the twists and turns - there are many.
