Working with postmodern ideas, *Beyond Quality in Early Childhood Education and Care* challenges  
received wisdom and the tendency to reduce philosophical issues of value to purely technical issues  
of measurement and management. In its place, it offers alternative ways of understanding early  
childhood, early childhood institutions and pedagogical work. It gives full consideration to the  
importance of social construction and meaning making, and to documentation and dialogue. The  
book places issues of early childhood into a global context and relates them to writers from many  
fields. Drawing on work with aboriginal peoples in Canada, on the experience of Reggio-Emilia in  
Italy and on a project in Stockholm inspired by Reggio, the book considers the implications of these  
alternative ways of understanding, for practice and a reconceptualization of early childhood  
education and care.

"Child Development: Context, Culture, and Cascades is a new child development text that presents a  
contemporary understanding of development today. Written by an active researcher, this text is  
informed by the importance of socio-cultural context, the interconnectedness of developmental  
domains, and a focus on contemporary research. This textbook adopts the familiar structure of  
presenting a chronological approach that structures domains of development under periods of  
development, meaning that periods of development (prenatal, infancy, toddlerhood, early childhood,  
etc.) fit within domains of development (physical, language, cognitive, social, emotional). An  
introductory section lays a foundation with theoretical frameworks and discipline-relevant constructs  
(continuity, stability, sensitive periods). The book provides three thematic features that collectively  
make it unique to the field and aim to enrich the thinking of students and instructors alike. These  
are (1) developmental cascades; (2) the socio-cultural contexts of development; and (3) the  
inclusion of contemporary research in the field"--

In the past several years, models of multi-tiered service delivery have emerged as a framework for  
supporting the needs of school-aged children in schools across the country and have received much  
attention in scholarly publications of education and related fields. Despite the needs of young  
children and the promise of early intervention, however, models of multi-tiered service delivery are  
only in the beginning stages of development in early childhood education settings such as  
preschools. This text provides early-childhood professionals with an introduction to tiered service  
delivery and practical considerations in the implementation of a multi-tier system of supports with  
particular emphasis on early childhood law and ethics, assessment and intervention, developmental  
disabilities, and family engagement.

This timely and accessible volume explores how our understanding of research in child development can help cultivate the knowledge, skills, and attitudes children need for informed and thoughtful participation in society by viewing the curriculum through a developmental lens. Biddle and Garcia-Nevarez cover a range of key topics including characteristics of physical, cognitive, and psychosocial development of children; heritable and environmental influences on children's developing self; language and literacy development; mathematical cognition; growth mindsets; and evidence-based positive behavioral interventions and supports. The expert team of contributors offers an advanced exploration of developmental science and how this applies to learning and education in order to create inclusive environments that support children with a range of abilities, including those with the most significant medical, intellectual, and developmental delays. Each chapter contains boxes exploring how the topic relates to the themes of "Promoting Social and Emotional Competence Theory," "Research to Practice Connection," "Common Core and Other Standards," and "Social Justice and Diversity," ensuring comprehensive and consistent coverage across the volume. *Developmentally Appropriate Curriculum and Instruction* will be essential reading for students of child development and education, as well as educators and those in teacher training who are interested in how theory and research can be effectively harnessed to improve children's outcomes.

The achievement of students of color continues to be disproportionately low at all levels of education. More than ever, Geneva Gay's foundational book on culturally responsive teaching is essential reading in addressing the needs of today's diverse student population. Combining insights from multicultural education theory and research with real-life classroom stories, Gay demonstrates that all students will perform better on multiple measures of achievement when teaching is filtered through their own cultural experiences. This bestselling text has been extensively revised to include expanded coverage of student ethnic groups: African and Latino Americans as well as Asian and Native Americans as well as new material on culturally diverse communication, addressing common myths about language diversity and the effects of "English Plus" instruction.

As in previous editions, this book approaches the study of child development from an inside/outside perspective, looking at children from an abstract or research-based point of view as well as from a personal or experiential perspective. The "whole child" is addressed at each stage of development in a chronological format with each stage presenting physical, cognitive, social, and emotional facets of the child. Strong coverage of research, theory, and issues in developmental psychology is augmented with examples to show their implications to students.

We discuss whole-child development, learning, and thriving through a dynamic systems theory lens that focuses on the United States and includes an analysis of historical challenges in the American public education system, including inequitable resources, opportunities, and outcomes. To transform US education systems, developmental and learning scientists, educators, policymakers, parents, and

communities must apply the knowledge they have today to 1. challenge the assumptions and goals that drove the design of the current US education system, 2. articulate a revised, comprehensive definition of whole-child development, learning, and thriving that accepts rather than simplifies how human beings develop, 3. create a profound paradigm shift in how the purpose of education is described in the context of social, cultural, and political forces, including the impacts of race, privilege, and bias and 4. describe a new dynamic 'language' for measurement of both the academic competencies and the full set of 21st century skills.

Children's learning, development and well-being are directly influenced by their daily interactions with other children, adults, their families and the environment. This interactive process is known as "process quality", and leads to a key question - which policies set the best conditions for children to experience high-quality interactions in early childhood education and care (ECEC) settings?

*The School Counselor's Guide to Multi-Tiered Systems of Support* OECD Publishing

Recognizing the various ecological contexts that support children's development while amplifying voices from across the globe, this book challenges narrow interpretations of quality and best practice. Each author offers a unique perspective on issues germane to the field of early childhood education: perceptions of children, curriculum, teacher education, and play-based learning. An innovative, timely, and much-needed contribution, this book represents an inclusive collection of theoretical and cultural knowledge, as well as research. Such a diverse multicentric lens opens new

intellectual pathways for authentic, reciprocal knowledge exchange, while ensuring that a reimagining of early childhood education remains at the core of our teaching practice, scholarship, and activism. This book invites everyone to imagine, to dare to believe, to hope, and to act—in the interests of children, in the interests of communities and families, and in the moral precepts of equity, inclusion and justice.

Diverse international perspectives on the ways in which young children's learning and care may be supported converge in this book. Traversing the field of early childhood education and care from its established philosophical underpinnings to 21st century research, policies, and practices, the contributions to this volume draw together past and present discourses as a basis for shaping future trajectories. In spite of a growing international consensus on the strong influence of early childhood experiences on lifetime outcomes, the nineteen chapters reveal contemporary early childhood pedagogy as a collection of spaces characterised by plurality, complexity, and dissonance. These characteristics signal the importance of recognising early childhood pedagogies: multiple models of practice for the many diverse learning and care contexts that have the capacity to value young children as individuals and enable each to flourish now and throughout their lives. Moreover, such characteristics disrupt notions that a single 'optimal' early childhood pedagogy is either possible or desirable.
