 This book presents topical research on human and animal mating strategies, gender differences and environmental influences. Topics include the mating effects on female reproductive organs and the paradigm of oestrogen signalling pathways in the oviduct; sexual maturation, mating strategies and neuroendocrinology in social insects; plasticity in mating patterns of a benthic nest-holding fish related to the effects of nest-site abundance and social interactions; and human sexual strategies of short-term mating and parental control

over mate choice.

 Birds do it, bees do it, penguins do it, and orangutans do it. By having sex and giving birth to offspring, animals ensure that their species will survive into the next generation. And in this quest for survival, animals go to great lengths. Some animal mating techniques may strike you as strange or gross, but to the animals themselves, these practices are essential. Animals with the best strategies for choosing mates and making babies ensure that their species live on. Without animal sex, there would be no animal life.

 An unparalleled exploration of the mysteries underlying women's sexuality

that rivals the culture-shifting Kinsey Report, from two of America's leading research psychologists Do women have sex simply to reproduce or display their affection? When University of Texas at Austin clinical psychologist Cindy M. Meston and evolutionary psychologist David M. Buss joined forces to investigate the underlying sexual motivations of women, what they found astonished them. Through the voices of real women, Meston and Buss reveal the motivations that guide women's sexual decisions and explain the deep-seated psychology and biology that often unwittingly drive women's desires—sometimes in pursuit of health or pleasure, or sometimes for darker, disturbing reasons that a woman may not fully recognize. Drawing on more than a

thousand intensive interviews conducted solely for the book, as well as their pioneering research on physiological response and evolutionary emotions, *Why Women Have Sex* uncovers an amazingly complex and nuanced portrait of female sexuality. They delve into the use of sex as a defensive tactic against a mate's infidelity (protection), as a ploy to boost self-confidence (status), as a barter for gifts or household chores (resource acquisition), or as a cure for a migraine headache (medication). *Why Women Have Sex* stands as the richest and deepest psychological understanding of female sexuality yet achieved and promises to inform every woman's (and her partner's) awareness of her relationship to sex and her sexuality.

There are close to one hundred million single adults living in the United States. Of those, approximately thirty-five million will look at online dating sites this year alone. *Internet Dates from Hell* provides the ins and outs of Internet dating from one woman's experiences, ranging from funny to scary to downright shocking. *Internet Dates from Hell* is not only a guide; it is also a seven-year journey through author Trisha Ventker's dating life as a single kindergarten teacher who relocated from the suburbs to New York City to find her soul mate. Fielding over four hundred responses on a given day, and receiving more than fifty-two thousand hits on her personal ad in an eight-month span, Ventker shares her frightening but true dating encounters in the wonderful world of online dating. Follow Ventker through the trials and tribulations of her quest to find "Mr. Right". Along the path, Trisha Ventker endures hundreds of first dates. Encounters include a conspiracy theorist living in the United Kingdom, a religious fanatic from Texas, a sadomasochistic psychiatrist, and even a pre-op transsexual, to name a few. Ventker's brutally honest memoir lets you step inside her shoes and experience her exciting journey firsthand.

*Wild Kingdom meets Sex and the City* in

this scientific perspective on dating and relationships. A specialist in animal behavior compares the courtship rituals and mating behaviors of animals to their human equivalents, revealing the many and often surprising ways we are both similar to and different from other species. What makes an individual attractive to the opposite sex? Does size matter? Why do we tend to "keep score" in our relationships? From perfume and cosmetics to online dating and therapy, our ultimate goal is to successfully connect with someone. So why is romance such an effort for humans, while animals have little trouble getting it right? *Wild Connection* is full of fascinating and suggestive observations about animal behavior. For example, in most species smell is an important component of determining compatibility. So are we humans doing the right thing by masking our natural scents with soaps and colognes? Royal albatrosses have a lengthy courtship period lasting several years. These birds instinctively know that casual hook-ups are not the way to find a reliable mate. And older female chimpanzees often mate with younger males. Is this the evolutionary basis of the human "cougar" phenomenon? Fun to read as well as educational, this unique take on the perennial human quest to find the ideal mate shows that we have much to learn from our cousins in the wild.

From winner of the Nordic Council Literature Prize and the Icelandic Literature Prize, Auður Ava Ólafsdóttir, comes a dazzling novel about a family of midwives set in the run-up to Christmas in Iceland. In the days leading up to Christmas, Dómhildur delivers her 1,922nd baby. Beginnings and endings are her family trade; she comes from a long line of midwives on her mother's side and a long line of undertakers on her father's. She even lives in the apartment that she inherited from her grandaunt, a midwife with a unique reputation for her unconventional methods. As a terrible storm races towards Reykjavik, Dómhildur discovers decades worth of letters and manuscripts hidden amongst her grandaunt's clutter. Fielding calls from her anxious meteorologist sister and visits from her curious new neighbour, Dómhildur escapes into her grandaunt's archive and discovers strange and beautiful reflections on birth, death and human nature. With her singular warmth and humor, in *Animal Life* Ólafsdóttir gives us a beguiling novel that comes direct from the depths of an Icelandic winter, full of hope for spring.

**The A-V. Learn With Facts**

Why do three out of four professional football players go bankrupt? How can illiterate jungle dwellers pass a test that tricks Harvard philosophers? And why do billionaires work so hard -- only to give their hard-earned money away? When it comes to making decisions, the classic view is that humans are eminently rational. But growing evidence suggests instead that our choices are often irrational, biased, and occasionally even moronic. Which view is right -- or is there another possibility? In this animated tour of the inner workings of the mind, psychologist Douglas T. Kenrick and business professor Vladas Griskevicius challenge the prevailing views of decision making, and present a new alternative grounded in evolutionary science. By connecting our modern behaviors to their ancestral roots, they reveal that underneath our seemingly foolish tendencies is an exceptionally wise system of decision making. From investing money to choosing a job, from buying a car to choosing a romantic partner, our choices are driven by deep-seated evolutionary goals. Because each of us has multiple evolutionary goals, though, new research reveals something radical -- there's more than one "you" making decisions. Although it feels as if there is just one single "self" inside your head, your mind actually contains several different subselves, each one steering you in a different direction when it takes its turn at the controls. The *Rational Animal* will transform the way you think about decision making. And along the way, you'll discover the intimate connections between ovulating strippers, Wall Street financiers, testosterone-crazed skateboarders, Steve Jobs, Elvis Presley, and you.

This text attempts a broad theoretical synthesis within the field of sociology and its closely allied sister discipline of anthropology. It draws together these disciplines' theoretical approaches into a synthesized theory called Darwinian conflict theory.

Focusing on non-human actors, Grażyna Gajewska expands the discussion of eroticism in contemporary culture by bringing in material culture, object studies, and "the anthropology of things." She sets out from the assumption that things (such as, for instance, attire, underwear, shoes, or jewelry) play an important role in arousing erotic imagination—they are genuine participants in the process, not

mere signifiers of eroticism. Their use does not denote only undeniable facts of everyday life associated with functionality, the pragmatic or aesthetic aspect, but also contribute to the shaping of human emotions, fantasies and phantasms. In her study, Gajewska brings eroticism in contemporary culture to light through applying gender studies to new contexts—animals, robots, virtual worlds—even as she explores a new methodology, the anthropology of things.

The first photo book to focus on the feminine side of the animal kingdom Some 150 photographs of female lions, elephants, and many other animals Fascinating facts, exciting stories -- nature infotainment at its best Text in English and German "...a captivating book covering a wide spectrum of animal behavior and species... this is a book to make you re-think the role of the female." --BBC Wildlife In the lion world, only the females hunt -- because they do it best! The boss of a hyena pack? An alpha female. Even the lowest-ranking female of the pack is superior to her male counterparts. As for praying mantises? They keep interaction with men to the essentials, eating them right after mating for added nutrition. The first photo book to focus exclusively on the female of the species, Fearless Females is a fascinating account of "feminine" strength throughout the animal kingdom. With some 150 photographs, accompanied by remarkable facts and extraordinary stories, the book reveals the fierce, formidable, and fascinating antics of she lions, elephants, and many other creatures. A refreshing reappraisal of "feminine" behavior and a long overdue emancipation of nature and wildlife photography. Text in English and German. *Pictures of Women* Lutterworth Press

In the third edition of *Provocateur*, sociologist Anthony Cortese offers an in-depth critical analysis of modern advertising—perhaps the most powerful cultural and economic institution. Focusing on images of women and minorities, he unravels the ideologies of domination and control in contemporary commerce. The third edition includes updated advertisements and analyses, and Cortese concludes with policy implications for advertising.

Between the first and second decade of the millennium, women across the world

reconsidered the sexual roles they had been playing under patriarchy. The 2012 protests in India triggered some of this global change, ushering Indians squarely into the desired yet uncomfortable "third wave" feminism which demands the recognition of women as sexual subjects. Beginning from the premise that each country is in a unique relationship to patriarchy, *Women's Sexuality in India: In a Rapture of Distress* offers pictures of how individual Indian women locate their sexuality amidst the fantasies of Indian patriarchy, and of world culture that imagine their sexuality for them. Built from a data set of upper-middle class women, the book opens up a number of provocative questions. How is dismantling the patriarchy in the imagination different from fighting patriarchy in the outer world? What aspects of sex under patriarchy do women want to give up, and what would they like to keep? What conflicts unfold when daughters welcome as "sexual liberation" ideas that their mothers believed had "come from the west", a west that has been, until fairly recently, a hated colonial oppressor? How did the control of upper-middle class women's sexuality serve as an anchor for collective anxieties about the inherent instability of gender and sexuality? What is the nature of the spectator effect when post-sexual revolution countries listen to the sexuality narratives of countries like India that have not had a sexual revolution?

Philosophy reads humanity against animality, arguing that "man" is man because he is separate from beast. Deftly challenging this position, Kelly Oliver proves that, in fact, it is the animal that teaches us to be human. Through their sex, their habits, and our perception of their purpose, animals show us how not to be them. This kinship plays out in a number of ways. We sacrifice animals to establish human kinship, but without the animal, the bonds of "brotherhood" fall apart. Either kinship with animals is possible or kinship with humans is impossible. Philosophy holds that humans and animals are distinct, but in defending this position, the discipline depends on a discourse that relies on the animal for its very definition of the human. Through these and other examples, Oliver does more than just establish an animal ethics. She transforms ethics by showing how its very origin is dependent upon the animal. Examining for the first time the treatment of the animal in the work of Heidegger, Merleau-Ponty, Derrida, Agamben, Freud, Lacan, and Kristeva, among others, *Animal*

Lessons argues that the animal bites back, thereby reopening the question of the animal for philosophy.

*Seeing Animals* traces the significance of animals to humankind from prehistory to the present day, as objects of worship, means of survival and valued companions. But do animals still matter in our increasingly urbanised and technological age? This book shows that they matter not only because the world would cease to exist without them, but also because we too are animals and how we see them reflects our regard for ourselves and each other. Animals affect people's lives in a multitude of ways: in art and literature, in daily work, for hunting and sport, as helpers and guides, and not least as essential providers of nourishment and warmth. By closely observing the enormous diversity of animal behaviour, characteristics and habits, whether in the wild, on the screen or as part of domestic life, we will be both humbled and enriched. So wherever you live, whatever your lifestyle, this book encourages you to go out and search for animals, to look at them and learn to see them, not as lesser creatures but as fellow travellers and cohabitants on our extraordinary planet.

"*The Courtship of Animals*" researches the emotions present an infinite range of variety in the higher animals, especially in the period of courtship. The author considers that the psychical phenomena are the soul of life, and therefore, they must be carefully examined.

The Evolution of Human Sociality Twenty-First Century Books

There has been a dramatic increase in theoretical and practical studies on insect natural enemies over the last decades. The appeal of insect predators and, in particular, parasitoids, as research animals derives from the relative ease with which many species may be cultured and experimented on in the laboratory, the simple life-cycles of most parasitoid species, and the increasing demand for biological pest control as a key component of the integrated pest management approach. There is now a very substantial literature on insect natural enemies and thus a great need for a general text that enquiring students or research workers can use in deciding on approaches and techniques that are appropriate to the study and evaluation of such insects. This book fulfils that demand. It is a considerably updated and expanded version of a previous best-seller and provides an account of major aspects of

the biology of predators and parasitoids, punctuated with information and advice on which experiments or observations to conduct and, importantly, how to carry them out. Guidance is provided, where necessary, on the most recent further literature that may need to be consulted on given topics. While researchers can now refer to several books on parasitoids and predators, Jervis's *Insects as Natural Enemies* is unique in emphasising practicalities. It is aimed at students and professionals working in universities and both government and commercial institutes in the fields of integrated pest management, agriculture, horticulture and forestry, as well as those interested in fundamentals of behavioural, population, community and evolutionary ecology.

This updated second edition offers a refined theoretical framework, new pedagogical features, and expansion of

advertising images and their analysis. Controversially, the second edition highlights preliminary evidence, contrary to popular opinion, that media sex and violence do not always sell. The new edition reviews these and other recent research findings. Other updates for this edition include: an evaluation of advertisements following the 9-11 terrorist attacks more on media violence and its nexus to youth violence new discussion of the use of advertising in law enforcement introduces the concept hybridizing (combinations of two types of advertising) many new ads representing cultural changes since the first edition

 Subjectified is a book about subjects, objects, and verbs. It is also a book about clothing-optional resorts, group masturbation circles, and sex parties. Suzannah Weiss takes the reader through

her adventures as a sex and relationship writer to explore how we can create a world with less objectification and more subjectification — placing women and other marginalized groups in the subject role of sentences and actions. Offering a deeply personal account and powerful critique of sexual empowerment movements, Suzannah Weiss presents a way forward that focuses more on what women desire, and less on what men desire from them. She makes a bold yet compassionate call for women everywhere to inhabit their bodies and hearts — to remain connected to their inner eye and their inner "I," even in a world where they are disproportionately "you," "she," or "them." The book is for everybody wanting to understand themselves better as subjects. Wholeheartedly, the author invites you to follow her search for subjecthood and, should you desire, forge your own path out of objecthood.
