Since the 1980s a
major change took

place in public policies
for water resources
management. This
interdisciplinary
research examines
how this water reform
process unfolds within
four African
waterscapes that are
historically constituted
by natural and social

processes. This study analyzes the interplay between public policies designed and implemented by government agencies and the institutions that govern access to and control over water resources among groups of agricultural water users. The findings of this research show that water policy in only a limited extent leads to progressive institutional change concerning agricultural water use.

Evaluation Methods in Medical Informatics N A S W Press

This book opens the boundaries of international school social work as never before. Sequentially arranged chapters allow practitioners, educators, and students to follow the expansion of school social work practice around the world. Leaders in the field

from 12 countries provide eye-opening perspectives and interventions that are impressive in their range and application. Further, the book looks ahead to policy and practice issues for the future direction of the profession. The book makes a compelling statement about contemporary school social work -- the critical need for the international professional community to learn from one another so that all of our children can reach their full potential through education. It exemplifies the value of collaboration in developing the literature of the profession and raises issues for social work educators about including international

themes in social work education.

This book examines several contentious and under-studied criminal career issues using one of the world's most important longitudinal studies, the Cambridge Study in Delinquent Development (CSDD), a longitudinal study of 411 South London boys followed in criminal records to age 40. The analysis reported in the book explores issues related to prevalence, offending frequency, specialization, onset sequences, co-offending, chronicity, career length, and trajectory estimation. The results of the study are considered in the context of developmental/life-

course theories, and the authors outline an agenda for criminal career research generally, and within the context of the CSDD specifically.

Out of necessity nursing, as a profession, reflects the qualities of the culture in which it exists. In our culture for the past quarter of a century nursing has been assailed with rapid economic, technological, shortage- abundance, changing scenes' vicissitudes. In the individual nurse these arouse turmoil and uncertainty. These cultural stirrings inflame that part of the nurse's spirit capable of chaotic conflict and

doubt. Often she questions her professional identity. "Just what is a nurse?" Her nurse colleagues, other professionals, and nonprofessionals freely, directly and indirectly-on television, in the theater, through the news media and the literature-pummel her with their multitudinous varied views.

Each chapter in the book is firmly rooted in

research and is well referenced as one would expect of such a book. It will be of particular use to people with an academic interest in this aspect of school management but will also be thought-provoking for those who are involved in the development of the curriculum within their institution' - escalate This book explores many of the new aspects of the core business of schools and colleges, that is, the curriculum. Keeping the focus clearly on learning and teaching, the contributors explore the practical issues for managers at institutional level, within the context of their need to understand and analyze key educational values and

principles. Part One presents overviews of theories and models of curriculum, while Part Two examines how these are applied through planning, monitoring and evaluating. Part Three explores in detail the various managerial roles within schools and colleges from leaders to those responsible for cross-curriculum work and special educational needs. The fourth part discusses the importance of effectively managing resources for the curriculum - the environment, support staff and finance. Contributors use empirical research evidence to analyze current curriculum trends whilst proposing various new models which are likely to

emerge in the 21st century.

Banking on Milk
Academic Press

Banking on Milk takes the reader on a journey through the everyday life of donor human milk banking across the United Kingdom (UK) and beyond, asking questions such as the following: Why do people decide to donate? How do parents of recipients hear about human milk? How does milk donation impact on lifestyle choices? Chapters record the practical everyday reality of work in a milk bank by drawing on extensive ethnographic observations and sensitive interview data from donors, mothers of recipients

and the staff of four different milk banks from across the UK, and visits to milk banks across Europe and North America. It discusses the ongoing pressures to do with supply, demand and distribution. An empirically informed "ethnography of the contemporary", where both biosociality and biopower abound, this book includes an exploration of how milk banks evolved from registering wet nurses with hospitals, showing how a regulatory culture of medical authority began to quantify and organize human milk as a commodity. This book is a valuable read for all those with an interest in breastfeeding or organ and tissue donation from a range of fields,

including midwifery, sociology, anthropology, geography, cultural studies and public health.

The Toyota Way to Service Excellence: Lean Transformation in Service Organizations
Lippincott Williams & Wilkins

Leaders are not just born to the role. They are born, then made - and sometimes unmade by their own actions. A leader who is not attuned to his or her followers soon becomes a leader in limbo and invariably then fails.

Connectedness, compassion, empathy, integrity, humility, reasonableness and a determination to be effective are the keys to attuned leadership. An attuned leader can step boldly into an

uncertain future with the certainty that followers will lend their support. In this richly reflective discussion of leadership and transformation the author provides a guide to what constitutes ethical leadership in local and global contexts, for business, politics and government. In a world where tyrants abound in corporations and in states, Attuned Leadership provides a compass for the direction of ethical leadership. Central to this perspective is that the philosophical traditions of Africa offer an important contribution to the theory and practice of leadership in the world today. African humanism or Ubuntu, evokes both reason and empathy as the

basis for ethical leadership. Ubuntu - articulated in the Zulu proverb Umuntu Ngumuntu Ngabantu - means that a person is a person because of other people. The author contends that the reciprocal relationship between the individual and the social collective stimulates caring and progressive thought and action. Nowhere is this more apt than in the relationship between leader and followers.

Entrepreneur offers a
simple, counterintuitive
cash management
solution that will help
small businesses break
out of the doom spiral
and achieve instant
profitability.

Conventional
accounting uses the
logical (albeit, flawed)
formula: Sales -
Expenses = Profit. The
problem is, businesses
are run by humans,
and humans aren't
always logical. Serial
entrepreneur Mike
Michalowicz has
developed a behavioral
approach to accounting
to flip the formula:
Sales - Profit =
Expenses. Just as the
most effective weight
loss strategy is to limit

portions by using
smaller plates,
Michalowicz shows that
by taking profit first
and apportioning only
what remains for
expenses,
entrepreneurs will
transform their
businesses from cash-
eating monsters to
profitable cash cows.
Using Michalowicz's
Profit First system,
readers will learn that:

- Following 4 simple

- A

- Businesses that

As director of a training program in medical informatics, I have found that one of the most frequent inquiries from graduate students is, "Although I am happy with my research focus and the work I have done, how can I design and carry out a practical evaluation that proves the value of my contribution?" Informatics is a multifaceted,

interdisciplinary field with research that ranges from theoretical developments to projects that are highly applied and intended for near-term use in clinical settings. The implications of "proving" a research claim accordingly vary greatly depending on the details of an individual student's goals and thesis statement. Furthermore, the dissertation work leading up to an evaluation plan is often so time-consuming and arduous that attempting the "perfect" evaluation is frequently seen as impractical or as diverting students from central programming or implementation issues that are their primary areas of interest. They often ask what compromises

are possible so they can provide persuasive data in support of their claims without adding another two to three years to their graduate student life. Our students clearly needed help in dealing more effectively with such dilemmas, and it was therefore fortuitous when, in the autumn of 1991, we welcomed two superb visiting professors to our laboratories.

This volume explores new frontiers in the linguistic study of iconic lexemes known as ideophones, mimetics, and expressives. A large part of the literature on this long-neglected word class has been

dedicated to the description of its sound symbolism, marked morphophonology, and grammatical status in individual languages. Drawing on data from Asian (especially Japanese), African, American, and European languages, the twelve chapters in this volume aim to establish common grounds for theoretical and crosslinguistic discussions of the phonology, morphology, syntax, semantics, pragmatics, acquisition, and variation of iconic lexemes. Not only researchers who are interested in linguistic iconicity but also theoretical linguists and typologists will benefit from the updated insights presented in each study.

School Social Work Worldwide SAGE Worldwide, in Africa and in South Africa, the importance of the doctorate has increased disproportionately in relation to its share of the overall graduate output over the past decade. This heightened attention has not only been concerned with the traditional role of the PhD, namely the provision of future academics; rather, it has focused on the

increasingly important role that higher education - and, particularly, high-level skills - is perceived to play in national development and the knowledge economy. This book is unique in the area of research into doctoral studies because it draws on a large number of studies conducted by the Centre of Higher Education Trust (CHET) and the Centre for Research on Evaluation, Science and Technology (CREST), as well as on studies from the rest of Africa and the world. In addition to the historical studies, new quantitative and qualitative research was undertaken to produce the evidence base for the analyses presented in the book. The findings presented

in Doctoral Education in South Africa pose anew at least six tough policy questions that the country has struggled with since 1994, and continues to struggle with, if it wishes to gear up the system to meet the target of 5 000 new doctorates a year by 2030. Discourses framed around the single imperatives of growth, efficiency, transformation or quality will not, however, generate the kind of policy discourses required to resolve these tough policy questions effectively. What is needed is a change in approach that accommodates multiple imperatives and allows for these to be addressed simultaneously.

Written from the perspective of a librarian, this book offers a comprehensive overview of the impact of e-books on academic libraries. The author discusses advantages to both researchers and librarians and provides current examples of innovative uses of e-books in academic contexts. This book reviews the current situation in e-book publishing, and describes problems in managing e-books in libraries caused by the variety of purchase models and varying formats available, and the lack of standardisation. It discusses solutions for providing access and maintaining bibliographic control,

looks at various initiatives to publicise and promote e-books, and compares e-book usage surveys to track changes in user preferences and behaviour over the last decade. E-books have already had a huge impact on academic libraries, and major advances in technology will bring further changes. There is a need for collaboration between libraries and publishers. The book concludes with reflections on the future of e-books in academic libraries. Describes how e-books have changed library services and how they have enabled academic libraries to align with the e-learning initiatives of their universities. Discusses problems with e-book collection

development and management and lists examples of solutions Examines trends in user behaviour and acceptance of e-books
