This document is designed to be a resource for those Linux users wishing to seek clarification on Linux/UNIX/POSIX related terms and jargon. At approximately 24000 definitions and two thousand pages it is one of the largest Linux related dictionaries currently available. Due to the rapid rate at which new terms are being created it has been decided that this will be an active project. We welcome input into the content of this document. At this

moment in time half yearly updates are being envisaged. Please note that if you wish to find a 'Computer Dictionary' then see the 'Computer Dictionary Project' at <http://computerdictionary.tsf.org.za/> Searchable databases exist at locations such as:

ABA Journal Plunkett Research, Ltd.

A few of us are troubled enough that we choose to walk the remainder of this road called "life," searching for answers and achieving some significance and bliss. An adolescent found the courage in

his frailty to renounce everything and escape into the refuge of the wilderness of Northern India. Due to a vivid nightmare, he faltered at the last moment and stayed put within the confines of his tormented urban existence. A year passed and his compulsive impulse for that escape was suppressed. Rebuilding a new way to live, he channeled and fed those impulses by trekking into the mountains of Maharashtra, trailing through the forests of Bhandavgarh and Tadoba Andhari, whilst getting too close to tigers and crocodiles. In doing so, he transformed himself into a true backpacker. But something was still amiss. Love. It took just one woman to undo all the good. The adolescent turned man found himself weaker than ever

before and drenched in despair. He was back where he started, fighting the same impulse to escape into the Northern Mountains. Will the road cease for him or will he find a silver lining ahead? See where his path leads him in *A Bittersweet Nostalgia*.

The use of contextually aware, pervasive, distributed computing, and sensor networks to bridge the gap between the physical and online worlds is the basis of mobile social networking. This book shows how applications can be built to provide mobile social networking, the research issues that need to be solved to enable this vision, and how mobile social networking can be used to provide computational intelligence that will improve daily life. With contributions from the fields of sociology, computer

science, human-computer interaction and design, this book demonstrates how mobile social networks can be inferred from users' physical interactions both with the environment and with others, as well as how users behave around them and how their behavior differs on mobile vs. traditional online social networks.
