The director of the famed Bodleian Libraries at Oxford narrates the global history of the willful destruction—and surprising survival—of recorded knowledge over the past three millennia. Libraries and archives have been attacked since ancient times but have been

especially threatened in the modern era. Today the knowledge they safeguard faces purposeful destruction and willful neglect; deprived of funding, libraries are fighting for their very existence. *Burning the Books* recounts the history that brought us to this point. Richard Ovenden describes the deliberate destruction of knowledge held in libraries and archives from ancient Alexandria to contemporary Sarajevo, from smashed Assyrian tablets in Iraq to the destroyed immigration documents of the UK Windrush generation. He examines

both the motivations for these acts—political, religious, and cultural—and the broader themes that shape this history. He also looks at attempts to prevent and mitigate attacks on knowledge, exploring the efforts of librarians and archivists to preserve information, often risking their own lives in the process. More than simply repositories for knowledge, libraries and archives inspire and inform citizens. In preserving notions of statehood recorded in such historical documents as the Declaration of

Independence, libraries support the state itself. By preserving records of citizenship and records of the rights of citizens as enshrined in legal documents such as the Magna Carta and the decisions of the US Supreme Court, they support the rule of law. In *Burning the Books*, Ovenden takes a polemical stance on the social and political importance of the conservation and protection of knowledge, challenging governments in particular, but also society as a whole, to improve public policy and funding for these essential institutions. *Memoirs of the Protector, Oliver Cromwell, and of His Sons, Richard and Henry* Parapress Limited

Written in response to the Hawk's Nest Tunnel disaster of 1931 in Gauley Bridge, West Virginia, *The Book of the Dead* is an important part of West Virginia's cultural heritage and a powerful account of one of the worst industrial catastrophes in American history. The poems collected here investigate the roots of a tragedy that killed hundreds of workers, most of them African American. They are a rare engagement with the overlap between race and environment in Appalachia. Published for the first time alongside photographs by Nancy Naumburg, who accompanied Rukeyser to Gauley Bridge in 1936, this edition of *The Book of the Dead* includes an introduction by Catherine Venable Moore, whose writing on the topic has been anthologized in *Best American Essays*.

2004 is the quatercentenary of the death of Edward de Vere, 17th Earl of Oxford. This collection of 39 essays is published in celebration of his life and achievements. Oxford, a key figure of the English Renaissance, at the heart of Elizabethan court and cultural events, has a substantial claim to authorship of the

works of 'Shakespeare'. There is an increasingly recognised problem in relating the life of the man from Stratford to the knowledge and cast of mind displayed in the works which now bear his name. This book is a benchmark for future discussion and research in the Authorship debate.

England has traditionally been understood as a latecomer to the use of forensic medicine in death investigation, lagging nearly two-hundred years behind other European authorities. Using the coroner's inquest as a lens, this book hopes to offer a fresh perspective on the process of death investigation in medieval England. The central premise of this book is that medical practitioners did participate in death investigation – although not in every inquest, or even most, and not necessarily in those investigations where we today would deem their advice most pertinent. The medieval relationship with death and disease, in particular, shaped coroners' and their jurors' understanding of the inquest's medical needs and led them to conclusions that can only be understood in

context of the medieval world's holistic approach to health and medicine. Moreover, while the English resisted Southern Europe's penchant for autopsies, at times their findings reveal a solid understanding of internal medicine. By studying cause of death in the coroners' reports, this study sheds new light on subjects such as abortion by assault, bubonic plague, cruentation, epilepsy, insanity, senescence, and unnatural death. *The Catholic Encyclopedia* Routledge Shakespeare plays, texts.

Grief is a universal human response to death and loss. Mourning is an equally

universally observable practice that enables the bereaved to express their grief and come to terms with the reality of loss. Yet, despite their prevalence, there is no unified understanding of the nature and meaning of grief and mourning. *The Meaning of Mourning: Perspectives on Death, Loss, and Grief* brings together fifteen essays from diverse disciplines addressing the topics of death, grief, and mourning. The collection moves from general questions concerning the putative badness of death and the meaning of loss through the phenomenology and psychology of grief, to personal and cultural aspects of mourning. Contributors examine topics such as theodicy and grief, reproductive loss, mourning as a form of recognition of value, the roots of grief in early childhood, grief in COVID-times, hope, phenomenology of loss, public commemoration and mourning rituals, mourning for a devastated culture, the Necropolis of Glasgow, and the "art of outliving." Edited by Mikołaj Sławkowski-Rode, the volume provides a survey of the rich topography of methodologies, problems, approaches, and disciplines that are involved in the study of issues

surrounding loss and our responses to it and guides the reader through a spectrum of perspectives, highlighting the connections and discontinuities between them.

World War Two was the most devastating conflict in recorded human history. It was both global in extent and total in character. It has understandably left a long and dark shadow across the decades. Yet it is three generations since hostilities formally ended in 1945 and the conflict is now a lived memory for only a few. And this growing distance in time has allowed historians to think differently about how to describe it, how to explain its course, and what subjects to focus on when considering the wartime experience. For instance, as World War Two recedes ever further into the past, even a question as

apparently basic as when it began and ended becomes less certain. Was it 1939, when the war in Europe began? Or the summer of 1941, with the beginning of Hitler's war against the Soviet Union? Or did it become truly global only when the Japanese brought the USA into the war at the end of 1941? And what of the long conflict in East Asia, beginning with the Japanese aggression in China in the early 1930s and only ending with the triumph of the Chinese Communists in 1949? In *The Oxford Illustrated History of World War Two* a team of leading historians re-assesses the conflict for a new generation, exploring the course of the war not just in terms of the Allied response but also from the viewpoint of the Axis aggressor states. Under Richard Overy's expert editorial guidance, the contributions take us from the genesis of war, through the action in the major theatres of conflict by land, sea, and air, to assessments of fighting power and military and technical innovation, the economics of total war, the culture and propaganda of war, and the experience of war (and genocide) for both combatants and civilians, concluding with an account of the transition from World War to Cold

War in the late 1940s. Together, they provide a stimulating and thought-provoking new interpretation of one of the most terrible and fascinating episodes in world history.

NATIONAL BESTSELLER • NATIONAL BOOK AWARD FINALIST • An "extraordinary ... profoundly moving" history (The New York Times Book Review) of the American Civil War that reveals the ways that death on such a scale changed not only individual lives but the life of the nation. An estimated 750,000 soldiers lost their lives in the

American Civil War. An equivalent proportion of today's population would be seven and a half million. In *This Republic of Suffering*, Drew Gilpin Faust describes how the survivors managed on a practical level and how a deeply religious culture struggled to reconcile the unprecedented carnage with its belief in a benevolent God. Throughout, the voices of soldiers and their families, of statesmen, generals, preachers, poets, surgeons, nurses, northerners and southerners come together to give us a vivid understanding of the Civil War's most fundamental and widely shared reality. With a new introduction by the author, and a new foreword by Mike Mullen, 17th Chairman of the Joint Chiefs of Staff.
