The most beautiful fish in the entire ocean discovers the real value of personal beauty and friendship.

*Kindergarten, a Year of Learning* Archway Publishing

What is understanding and how does it differ from knowledge? How can we determine the big ideas worth understanding? Why is understanding an important teaching goal, and how do we know when students have attained it? How can we create a rigorous and engaging curriculum that focuses on understanding and leads to improved student performance in today's high-stakes, standards-based environment? Authors Grant Wiggins and Jay McTighe answer these and many other questions in this second edition of *Understanding by Design*. Drawing on feedback from thousands of educators around the world who have used the UbD framework since its introduction in 1998, the authors have greatly revised and expanded their original work to guide educators across the K-16 spectrum in the design of curriculum, assessment, and instruction. With an improved UbD Template at its core, the book explains the rationale of backward design and explores in greater depth the meaning of such key ideas as essential questions and transfer tasks. Readers will learn why the familiar coverage- and activity-based approaches to curriculum design fall short, and how a focus on the six facets of understanding can enrich student learning. With an expanded array of practical strategies, tools, and examples from all subject areas, the book demonstrates how the research-based principles of *Understanding by Design* apply to district frameworks as well as to individual units of curriculum. Combining provocative ideas,

thoughtful analysis, and tested approaches, this new edition of *Understanding by Design* offers teacher-designers a clear path to the creation of curriculum that ensures better learning and a more stimulating experience for students and teachers alike.

*Bright and Brainy* Lerner Publishing Group

Children develop on an exponential basis, and teachers must guide them in a conscientious manner. This community-based curriculum promotes supporting teachers, parents, and especially children. The conceptual framework places the child at the center and seeks to bring together multiple perspectives to allow for inquiry in every contextual experience. The contributors argue that we must:

- endeavor to continuously create a child-centered, research-based curriculum that is inclusive, innovative, sensitive, holistic, progressive, global, and democratic;
- support the importance of multiple perspectives shaping our dialogue and our community;
- envision learning as a series of joyful discoveries that prepare children to reach into their creative capacities and develop a lifelong love of learning. We must embrace philosophical discourse in order to grow as people and as active members of our communities – and we must see children as people with rights, inherent value, knowledge, competencies, and understanding. Examine the ways we educate children with a holistic, caring, and dynamic perspective and start helping students succeed with the findings and insights in *Building Bridges*.

Textbooks are symbols of centuries-old education. They're often outdated as soon as they hit students' desks. Acting "by the textbook" implies compliance and a lack of creativity. It's time to ditch those textbooks--and those textbook assumptions about learning. In *Ditch That Textbook*, teacher and blogger Matt Miller encourages educators to throw out meaningless, pedestrian teaching and learning practices. He empowers them to evolve and improve on old, standard, teaching methods. *Ditch That Textbook* is a support system, toolbox, and manifesto to help educators free their teaching and revolutionize their classrooms. *Day-by-Day Math Thinking Routines in Kindergarten* Random House Books for Young Readers
