New Foundations in Therapeutic Massage and Bodywork offers a core curriculum of fundamental principles and practical applications for beginning students as well as practitioners in the field who seek a reference and review for continuing education. This text also goes beyond the core curriculum by addressing such topics as massage for hospice patients and survivors of abuse as well as massage routines for common pathologies (including carpal tunnel syndrome, thoracic outlet syndrome, and fibromyalgia). With Exam Points highlighted throughout the text as well as a student CD offering additional test questions and study materials, New Foundations is designed to help students reach two important goals: to succeed in passing their National Certification Exam and to ultimately succeed in their careers. Practice expectations and realities are emphasized through case studies and author/contributor anecdotes. Full-color photographs and line art give the student a detailed view of the application or points being studied. Workbook pages, titled Applying Your Knowledge, are incorporated within the chapters for easy access and review.

This book is the product of an important collaboration between clinicians of the manual therapies and scientists in several disciplines that grew out of the three recent International Fascia Research Congresses (Boston, Amsterdam, and Vancouver). The book editors, Thomas Findley MD PhD, Robert Schleip PhD, Peter Huijing PhD and Leon Chaitow DO, were major organizers of these congresses and used their extensive experience to select chapters and contributors for this book. This volume therefore brings together contributors from diverse backgrounds who share the desire to bridge the gap between theory and practice in our current knowledge of the fascia and goes beyond the 2007, 2009 and 2012 congresses to define the state-of-the-art, from both the clinical and scientific perspective. Prepared by over 100 specialists and researchers from throughout the world, *Fascia: The Tensional Network of the Human Body* will be ideal for all professionals who have an interest in fascia and human movement - physiotherapists, osteopathic physicians, osteopaths, chiropractors, structural integration practitioners, manual therapists, massage therapists, acupuncturists, yoga or Pilates instructors, exercise scientists and personal trainers - as well as physicians involved with musculoskeletal medicine, pain management and rehabilitation, and basic scientists working in the field. Reflects the efforts of almost 100 scientists and clinicians from throughout the world Offers comprehensive coverage ranging from anatomy and physiology, clinical conditions and associated

therapies, to recently developed research techniques Explores the role of fascia as a bodywide communication system Presents the latest information available on myofascial force transmission which helps establish a scientific basis for given clinical experiences Explores the importance of fascia as a sensory organ - for example, its important proprioceptive and nociceptive functions which have implications for the generation of low back pain Describes new imaging methods which confirm the connectivity of organs and tissues Designed to organize relevant information for professionals involved in the therapeutic manipulation of the body's connective tissue matrix (fascia) as well as for scientists involved in basic science research Reflects the increasing need for information about the properties of fascia, particularly for osteopaths, massage therapists, physiotherapists and other complementary health care professionals Offers new insights on the fascial related foundations of Traditional Chinese Medicine Meridians and the fascial effects of acupuncture

First published in 1964, Beard's Massage is a classic physical therapy massage text originally authored by Gertrude Beard, a pioneering physical therapist in the 1920s who treated patients using soft tissue massage techniques that remain the basis of practice today. Now in its fifth edition, with a new title, this classic text has been expanded and updated throughout to provide you with an overview of massage, a description of massage techniques, information on the benefits of massage, and specific techniques for a variety of conditions. Practical step-by-step guidance to help you develop massage sequences that best meet the needs of your patients. Sections on massage strokes show the direction and sequence of each stroke, allowing you the benefit of using one comprehensive resource instead of several texts. Includes guidance in Swedish Remedial Massage techniques to help you develop proper massage techniques and sequences that best meet the needs of each individual client. Nearly 500 line drawings and photos demonstrate how to perform all of the basic strokes, the physiologic and therapeutic effects of each technique, and how to apply the most appropriate massage sequences to specific regions of the body. Photos include directional arrows that show hand position and movement across the patient. Updated references facilitate further study and demonstrate currency of the text. The new companion DVD with narrated video clips demonstrates each of the various techniques discussed in the text allowing you to visually comprehend proper timing and techniques. Icons in the text link the text to the DVD so they can function together as a complete learning tool. New chapter on Anatomical Landmarks for Soft Tissue Massage demonstrates the important anatomical landmarks and structures involved during the application of soft tissue massage techniques. New chapter on Focal Massage Sequences describes the use of various massage techniques for specific pathologies to help enhance your assessment skills for those clients who present with specific injuries and/or conditions. New chapter on Decongestive Therapy for the Treatment of Lymphedema shows how massage can be an effective part of lymphedema treatment. New chapter on Massage in Sport explains the different strokes and methods required for sports massage in rehabilitation. New chapter on Massage for the Baby and

Infant describes different methods for safe massage. New chapter on Massage in Palliative Care explains the role of massage, especially pain relief and relaxation, in the care of the terminally ill. New chapter on Soft Tissue Manipulation in Complementary/Alternative Medicine (CAM) describes different massage techniques in CAM therapies.
