CASTANEDA GRANT

Hepatitis C: Care and Treatment Da Capo Press, Incorporated

This handbook is written for hospital doctors and gastroenterologists

Chronic Hepatitis B and C Springer Science & Business Media

Chronic Hepatitis C virus (HCV) infection is a serious condition affecting over 180 million people world-wide. The virus infects the liver and while it is estimated that 20 per cent of those infected clear the virus spontaneously, the virus persists in the majority of individuals leading to liver fibrosis, cirrhosis, and hepatocellular carcinoma. This book presents topical research in the study of the epidemiology, pathogenesis and treatment of Hepatitis C Virus including: genome-wide association studies regarding HCV infection; hepatic and blood dendritic cell subsets in patients with chronic HCV; bone metabolism disorders in HCV infection; Socs1 involvement in liver damage during HCV infection; asymptomatic low-level HCV persistence; and HCV infection as the leading cause of liver disease in renal transplant recipients.

Hepatitis C, The Silent Epidemic Science Press Incorporated

Covering every aspect of Hepatitis C, this authoritative volume delivers the facts about this serious liver disease that afflicts four million Americans in a clear, straightforward way, and brings readers cutting-edge information on the symptoms, problems, and latest treatment options.

Hepatitis C Virus Wiley-Blackwell

With further rapid advances in diagnosis and therapy, the field of chronic viral hepatitis C and B has changed in important ways since the first edition of this best-selling text. This new edition is intended to bring all those involved in the care of patients with hepatitis up to date with the latest management guidelines. To help the reader, clear

Viral Hepatitis: Chronic Hepatitis C World Scientific

This book is a concise and up-to-date review of the clinical features, pathophysiology, diagnosis, and treatment of patients with hepatitis C. Busy health care professionals who want a quick review of hepatitis C and new developments in treatment for hepatitis C will benefit from this succinct guide. Hepatitis C virus primarily infects liver cells and can lead to chronic damage to the liver. Patients with hepatitis C infection often develop liver sequelae such as fibrosis, cirrhosis, and hepatocellular carcinoma if left untreated. It is estimated that 150 million people worldwide are infected with hepatitis C virus, and if eradication is to be achieved it is imperative to diagnose and treat such individuals.

Handbook of Hepatitis C Springer Nature

There are over 180 million people with chronic HCV infection worldwide with between 2.7 and 3.9 million in the United States. Hepatitis C most significantly affects Asia and Africa, with rates up to 15% in countries such as Egypt and up to 30% in certain regions such as Punjab, Pakistan. Hepatitis C places a significant burden on the public health infrastructure, as it remains the leading cause of

chronic liver disease, accounting for 50-75% of primary liver cancers and is responsible for 30% of all liver transplantations. It is estimated to have cost the United States \$5.5 billion in 1997, comparable to the national cost of asthma, \$5.8 billion in 1994. This number is only expected to grow as the current HCV population ages, increasing overall rates of compensated cirrhosis/end-stage liver disease. The evolution of directly acting anti-virals has ushered in a new era for chronic hepatitis C. Ongoing drug development strategy has involved targeting several replication steps of the virus and the hope is to see all oral therapies by late 2014 or early 2015. Thus we are at an exciting cross roads with regard to new information and challenges with HCV: rising disease burden with associated high costs, the challenges globally and in multiple patient populations, and the impending availability of effective and well tolerated treatments. Therefore there is a need to commission an exclusive issue of GCNA for HCV.

Human Chromosomes Springer

Despite numerous hepatitis C virus infection studies, its pathogenesis and medical treatment have not been fully explained. This comprehensive volume, written by experts in the field, covers the most recent advances in the study of HCV, moving from basic research to clinical applications. The first chapters of this volume analyze the full spectrum of immune responses to HCV. The volume also includes contributions that explain the state of the art in IFN-alpha treatment of HCV patients.

Hepatitis C Elsevier Health Sciences

As in many areas of medicine, treatment of viral hepatitis has seen an acceleration of change driven by new therapies and evolving technology. Thanks to the direct-acting antiviral agents (DAAs), the era of HCV eradication and cure has begun. As regards to hepatitis B therapy, potent antiviral drugs for suppression of viral replication are available, new research activities to enhance eradication are visible, and these may influence clinical practice in the coming years. This book covers the latest advances in hepatitis C and hepatitis B therapeutics as well as the emerging and investigational treatment strategies. "Advances in Treatment of Hepatitis C and Hepatitis B" book is an up-to-date source of information for physicians, residents, and advanced medical students seeking a broader understanding of treatment of viral hepatitis. The authors of the chapters come from many eminent centers around the world and are experts in their respective fields.

Contemporary Diagnosis and Management of Hepatitis C Springer

This book helps scientists, clinicians and other interested individuals understand recent clinical advances and challenges for the future. It covers many basic aspects of the pathogenesis of chronic hepatitis C, HCV infections in particular populations, approaches to therapy, and prevention and control of HCV infection. The book provides a succinct review of the large amount of data generated by multiple groups over the past two decades that has revealed the natural history of HCV infection. Similarly, it summarizes current understanding of the origins of HCV-associated hepatocellular carcinoma, cirrhosis and hepatic fibrosis. Extra-hepatic manifestation and metabolic disorders related to HCV infection are described. In this volume, these clinically important aspects of HCV infection are comprehensively described. Highlights are description of newly developed direct-

acting antivirals. The authors represent a worldwide distribution of leaders in the field reflecting the global nature of HCV infection. Based on recent data concerning the genetic- and geographical diversity of HCV, and increased global disease burden of HCV infection, challenges for global control of HCV infections are described.

Hepatitis C: From Pathophysiology to Disease Management Nova Science Publishers

The propagation of hepatitis C from acute to chronic infection and afterward to end-stage liver diseases (hepatic fibrosis, cirrhosis, and hepatocellular carcinoma) involves a highly orchestrated series of molecular and cellular events, including a plethora of genes and cell signaling cascades. The treatment paradigms was revolutionized after the development and approval of all oral interferon-free direct-acting antivirals achieving higher sustained virologic response rates in treated individuals. This book pragmatically overviews the intricate interplay between viral and host factors during hepatitis C virus infection progression, as well as other hepatitis C-associated clinical implications. Hepatitis C - From Infection to Cure also provides up-to-date information about hepatitis C cures for clinicians, physicians, and healthcare providers with an ample understanding of the current treatment horizon, as well as other investigational and emerging treatment strategies. The authors with their valuable scientific contributions belong to many eminent institutes around the world and are much experienced in hepatitis C virology, pathology, and therapeutics.

Hepatitis C Virus II Perspectives Cshl

Hepatitis C is a practical, evidence-based handbook that provides a comprehensive overview of the disease. It is an ideal resource for clinicians directly involved in the care of patients with hepatitis C.

Chronic Hepatitis C Virus CRC Press

The guidance is the first step in the provision of comprehensive guidance on viral hepatitis surveillance, prevention and treatment by the World Health Organization. The following recommendations are based on systematic reviews of scientific evidence, community values and preferences and implementation issues. Recommendation 1: It is suggested to offer people who inject drugs the rapid hepatitis B vaccination regimen. Recommendation 2: It is suggested to offer people who inject drugs incentives to increase uptake and completion of the hepatitis B vaccine schedule. Recommendation 3: It is suggested that needle and syringe programs also provide low dead-space syringes for distribution to people who inject drugs. Recommendation 4: Psychosocial interventions are not suggested for people who inject drugs to reduce the incidence of viral hepatitis. Recommendation 5: It is suggested to offer peer interventions to people who inject drugs to reduce the incidence of viral hepatitis.

Management of Chronic Viral Hepatitis Elsevier Health Sciences

This book presents up-to-date, practically oriented information on major topics in chronic hepatitis C. The coverage encompasses epidemiology; diagnosis, including molecular methods; treatment and challenges; and the management of co-infections. Readers will find guidance on pretherapeutic evaluation with respect to disease severity and extrahepatic manifestations. Resistance to antiviral treatment and its management are discussed, and the nature of optimal follow-up is addressed in detail. Treatment of HCV/HIV co-infection is considered separately, and the approach in special patient populations is thoroughly examined. Chronic Hepatitis C will be of high value for general practitioners and specialists in gastroenterology, infectious diseases, and internal medicine. It will be

international in scope in terms of both authorship and appeal.

Hepatitis C Oxford University Press, USA

This volume provides the reader with a detailed overview of the current state-of-the art approach of Hepatitis C management. It reviews the course of action in handling of chronic Hepatitis C patients with various HCV genotypes and treats special cases such as acute hepatitis, transplant and renal patients as well as people who inject drugs. The two volume work on Hepatitis C introduces to the topic by reviewing virology, diagnosis, epidemiology, prevention, management and elimination of HCV. The book provides a valuable source at full length for researchers and clinicians working on Hepatitis C.

Hepatitis C Is Everybody's Business BoD - Books on Demand

Hepatitis C infects 71 million people worldwide and there is currently no vaccine against the virus that causes the disease (HCV). This volume describes recent advances in our understanding of the biology of HCV and the consequences of infection, as well as ongoing efforts to develop a vaccine and new treatment strategies.

Viral Hepatitis Nova Biomedical Books

The scope of the book is very broad, covering a wide range of areas in HBV/HDV and HCV research, including both basic and clinical science. The selected topics range from epidemiology, immunology, molecular virology and oncology, to clinical therapy. Chronic Hepatitis B and C consists of 14 chapters, each being a review of a special topic on HBV or HCV. While review articles on a special topic can be found in periodical journals, they tend to be more restricted in presentation. Therefore, this book will provide more in-depth coverage of what are presented as "unpublished results" and "data not shown" in journal articles. Furthermore, several authors in this book do not write review articles regularly. Some authors wrote reviews on a specific topic regularly, but they tried a new topic in this book (e.g., Dr. YF Liaw on "natural course," Dr. Shih on "virion release," Dr. Michael Lai on "lymphotropism of HCV," etc. ...). Overall, the book will offer useful information at the cutting edge. Sample Chapter(s)

Advances in Treatment of Hepatitis C and B Handbooks in Health Care Company

Curvaceous, friendly and wholesome-looking, Playboy pinup Betty Page was the perfect complement to the still-innocent fantasies of young men during the Eisenhower years. Betty Page Confidential includes a biography of the reclusive goddess, an official Betty Page trivia quiz and 100 photos. Betty Page Confidential is the ultimate book on this 1950s icon.

Hepatitis C: Epidemiology, Prevention and Elimination Thieme

The 4th edition of Viral Hepatitis covers comprehensively the entire complex field of infections caused by all of the different hepatitis viruses, which affect many millions of people throughout the world with considerable morbidity and mortality. Howard Thomas and Arie Zuckerman are joined by Anna Lok from the USA and Stephen Locarnini from Australia as Editors. They have recruited leading researchers and physicians from many countries, who have produced an authoritative account of current knowledge and research on this important infection, including new insights into immune response to HBV and HCV. The result is a comprehensive account on all aspects of viral hepatitis, including rapid advances in the diagnosis, management, treatment and prevention of a complex infection, which in the case of hepatitis B, C and D may lead to severe complications including

chronic hepatitis, cirrhosis and hepatocellular carcinoma. The latest edition of *Viral Hepatitis* offers an essential resource of current information for hepatologists, gastroenterologists, infectious diseases specialists and other clinicians, researchers, public health physicians and National and International Health Authorities.

Health and Economic Growth Science Press Incorporated

The global epidemic of hepatitis B and C is a serious public health problem. Hepatitis B and C are the major causes of chronic liver disease and liver cancer in the world. In the next 10 years, 150,000 people in the United States will die from liver disease or liver cancer associated with chronic hepatitis B virus (HBV) or hepatitis C virus (HCV) infections. Today, between 800,000 and 1.4 million people in the United States have chronic hepatitis B and between 2.7 and 3.9 million have chronic hepatitis C. People most at risk for hepatitis B and C often are the least likely to have access to medical services. Reducing the rates of illness and death associated with these diseases will require greater awareness and knowledge among health care workers, improved identification of at-risk people, and improved access to medical care. Hepatitis B is a vaccine-preventable disease. Although federal public health officials recommend that all newborns, children, and at-risk adults receive the vaccine, about 46,000 new acute cases of the HBV infection emerge each year, including 1,000 in

infants who acquire the infection during birth from their HBV-positive mothers. Unfortunately, there is no vaccine for hepatitis C, which is transmitted by direct exposure to infectious blood. *Hepatitis and Liver Cancer* identifies missed opportunities related to the prevention and control of HBV and HCV infections. The book presents ways to reduce the numbers of new HBV and HCV infections and the morbidity and mortality related to chronic viral hepatitis. It identifies priorities for research, policy, and action geared toward federal, state, and local public health officials, stakeholder, and advocacy groups and professional organizations.

Hepatitis C Infection as a Systemic Disease: Extra-Hepatic Manifestation of Hepatitis C, An Issue of Clinics in Liver Disease Elsevier Health Sciences

Clinical information about Hepatitis C is quickly outdated, so Dr. Poordad has assembled expert authors to provide state-of-the-art clinical reviews for hepatologists. This issue is uniquely organized to present articles based on therapeutic regimens for certain types of patients: Regimens for the Treatment-Naïve Patient; Regimens for Treatment of the Interferon-Failure Patient; Regimens for DAA Failure Patients; Regimens for the Cirrhotic Patient; Regimens for the Peri-Transplant Patient; Regimens for the HIV-Co-Infected Patient; and Next-generation Regimens: The Future of HCV Therapy. This presentation will be very clinically relevant for the practicing hepatologist.
