Born from the fields of
Islamic art and
architectural history, the
archaeological study of
the Islamic societies is a

relatively young
discipline. With its roots in
the colonial periods of the
late 19th and early 20th
centuries, its rapid
development since the
1980s warrants a
reevaluation of where the
field stands today. This
Handbook represents for
the first time a survey of
Islamic archaeology on a
global scale, describing its

disciplinary development
and offering candid
critiques of the state of
the field today in the
Central Islamic Lands, the
Islamic West, Sub-
Saharan Africa, and Asia.
The international
contributors to the
volume address such
themes as the timing and
process of Islamization,
the problems of

periodization and regionalism in material culture, cities and countryside, cultural hybridity, cultural and religious diversity, natural resource management, international trade in the later historical periods, and migration. Critical assessments of the ways in which archaeologists today engage with Islamic cultural heritage and local communities closes the volume, highlighting the ethical issues related to studying living cultures and religions. Richly illustrated, with extensive

citations, it is the reference work on the debates that drive the field today.

Bir Ftouha University of Washington Press

This companion analyzes the different ways in which societies from Oceania to Europe and beyond were connected in the period 600-900 CE.

Amphoras and the Ancient Wine Trade

Cornell University Press

This volume examines the relationship between large-scale copper extraction and the development of social

complexity in Bronze Age southeastern Arabia, and provides critical new evidence for the production and exchange of copper and tin in wider Western Asia.

Named and Unnamed Gods in Herodotus AHS Press

This section ceramic petrography is a versatile interdisciplinary analytical tool for the characterization and interpretation of archaeological pottery. Using over 200 photomicrographs of thin sections from a diverse

range of artefacts, time periods and geographic regions, this provides comprehensive guidelines for their study within archaeology.

Ancient and Historical Ceramics ASCSA

This book is the first general work to be published on technology in Late Antiquity. It seeks to survey aspects of the technology of the period and to respond to questions about technological continuity, stagnation and decline. The book opens with a comprehensive

bibliographic essay that provides an overview of relevant literature. The main section then explores technologies in agriculture, production (metal, ceramics and glass), engineering and building. Papers draw on both archaeological and textual sources, and on analogies with medieval and early modern technologies. Reference is made not only to the periods which preceded it, but to the transition to the Early Middle Ages and to the technological heritage of Late Antiquity to the

Islamic world. Several papers focus on Italy, whilst others consider North Africa, Asia Minor, and the Near-East.

Origins of the Bronze Age Oasis Civilization in Central Asia ARC

Humanities Press
Intended for the industrial rather than studio ceramist, this volume covers the chemistry of glazes and enamels, including glaze and enamels formulation, raw materials for coatings, batch calculation, and mill additives and slip rheology, and color; the

processing of ceramic coatings, including mill
The Building of the Alps
 Hachette Tourisme
 Although this booklet is based on broken pottery found during the excavation of the Agora, the author ranges far beyond the confines of Athens in her discussion of the purpose and significance of different amphora types. Amphoras were used in the ancient world to transport various different types of products, including wine and oil. The author shows how chronological

variations in shape and the geographical clues offered by stamped handles make amphoras a fascinating source of economic information. The booklet illustrates many different forms of amphora, all set into context by the well-written text.
The Establishment of the Balkan National States, 1804-1920 FeniXX
 When Rolf Dahlgren and I embarked on preparing this book series, Rolf took prime responsibility for monocotyledons, which had interested him for a

long time. After finishing his comparative study and family classification of the monocots, he devoted much energy to the acquisition and editing of family treatments for the present series. After his untimely death, Peter Goldblatt, who had worked with him, continued to handle further incoming monocot manuscripts until, in the early 1990s, his other obligations no longer allowed him to continue. At that time, some 30 manuscripts in various states of perfection had

accumulated, which seemed to form a solid basis for a speedy completion of the FGVP monocots; with the exception of the grasses and orchids which would appear in separate volumes. I felt a strong obligation to do everything to help in publishing the manuscripts that had been put into our hands. I finally decided to take charge of them personally, although during my life as a botanist I had never seriously been interested

in monocots. *Treaty Series / Recueil Des Traites* UN This ambitious study documents the underlying features which link the civilizations of the Mediterranean - Phoenician, Greek, Etruscan and Roman - and the Iron Age cultures of central Europe, traditionally associated with the Celts. It deals with the social, economic and cultural interaction in the first millennium BC which culminated in the Roman Empire. The book has three principle

themes: the spread of iron-working from its origins in Anatolia to its adoption over most of Europe; the development of a trading system throughout the Mediterranean world after the collapse of Mycenaean Greece and its spread into temperate Europe; and the rise of ever more complex societies, including states and cities, and eventually empires. Dr Collis takes a new look at such key concepts as population movement, diffusion, trade, social structure and

spatial organization, with some challenging new views on the Celts in particular.

The European Iron Age

Harvard University Press
A COMPANION TO THE
ARCHAEOLOGY OF THE
ANCIENT NEAR EAST A
Companion to the
Archaeology of the
Ancient Near East is a
comprehensive and
authoritative overview of
ancient material culture
from the late Pleistocene
to Late Antiquity. This
expansive two-volume
work includes 58 new
essays from an

international community
of ancient Near East
scholars. With coverage
extending from Asia
Minor, the eastern
Mediterranean, and Egypt
to the Caucasus, Central
Asia, and the Indo-Iranian
borderlands, the book
highlights the enormous
variation in cultural
developments across
roughly 11,000 years of
human endeavor. In
addition to chapters
devoted to specific
regions and particular
periods, many
contributors concentrate
on individual industries

and major themes in
ancient Near Eastern
archaeology, ranging from
metallurgy and
agriculture to irrigation
and fishing. Controversial
issues, including the
nature and significance of
the antiquities market,
ethical considerations in
archaeological praxis, the
history of the foundation
of departments of
antiquities, and ancient
attitudes towards the
past, make this a unique
collection of studies that
will be of interest to
scholars, students, and
interested readers alike.

Archaeological Chemistry-III Pearson Education

This highly readable and thoroughly researched volume offers an excellent account of the development of seven Balkan peoples during the nineteenth and the first part of the twentieth centuries. Professors Charles and Barbara Jelavich have brought their rich knowledge of the Albanians, Bulgarians, Croatians, Greeks, Romanians, Serbians, and Slovenes to bear on every aspect of the area's history--political,

diplomatic, economic, social and cultural. It took more than a century after the first Balkan uprising, that of the Serbians in 1804, for the Balkan people to free themselves from Ottoman and Habsburg rule. The Serbians and the Greeks were the first to do so; the Albanians, the Croatians, and the Slovenes the last. For each people the national revival took its own form and independence was achieved in its own way. The authors explore the contrasts and similarities

among the peoples, within the context of the Ottoman Empire and Europe.

Raman Spectroscopy in Archaeology and Art History highlights the important contributions Raman spectroscopy makes as a non-

destructive method for characterising the chemical composition and structure and in determining the provenance and authenticity of objects of archaeological and historical importance. It brings together studies from diverse areas and represents the first dedicated work on the use of this technique in this increasingly important field. Coverage includes: An Introduction to Raman Spectroscopy, including practical aspects of Raman spectroscopy and

complementary techniques; Dyes and Pigments; Artefacts; Biological Materials and Degradation; Jewellery and Precious Stones. The book contains a broad selection of real-world examples in the form of case studies to provide the reader with a true appreciation of the procedures that need to be invoked to derive spectroscopic information from some of the most challenging specimens and systems. Colour illustrations of objects of investigation and a

database of 72 Raman spectra of relevant minerals are included. With its extensive examples, Raman Spectroscopy in Archaeology and Art History will be of particular interest to specialists in the field, including researchers and scientific/conservation staff in museums. Academics will find it an invaluable reference to the use of Raman spectroscopy. *Early Metallurgy of the Persian Gulf* Routledge
For many years, Tony

Mercer, grandson of the most enduring English maker, has studied and collected a huge amount of information about marine chronometers, instruments which enabled explorers and the Royal Navy to map the world, the Navy to police it, and merchant venturers to sail in relative safety. The purpose of the chronometer is reviewed largely as a navigational aid for ocean-going vessels, but also for survey, medical, and other activities calling for

precise time measurement. Representative examples of chronometers and deck watches by international makers--from the earliest known to contemporary instruments--are illustrated in both color and black and white. A comprehensive list of makers and craftsmen brings together details of men who worked in the industry, their places of work, and dates and serial numbers for their instruments.

Glazes and Glass Coatings BRILL

By stressing the congruence between cooking ceramics and tableware, and food and its consumption, this book offers a completely new view on ceramic science. It provides an interdisciplinary approach by linking ceramic science and engineering, archaeology, art history, and lifestyle. The selection of ceramic objects by the authors has been guided by historical significance, technological interest, aesthetic appeal, and mastery of craftsmanship. Readers

are being acquainted with the science of ceramics and their technology, and with the artistry of ceramic masterpieces fashioned by ancient master potters. Ceramics treated in this book range from Near Eastern pottery to the Meissen porcelain wonders, from the Greek black-on-red and the Minoan Crete masterpieces to British bone china, and from Roman Terra Sigillata to the celadon stoneware and porcelain produced in the kilns of China, Japan and ancient Siam. Ancient

and historical ceramic plates, pots, beakers and cups are juxtaposed with food preparations that likely may have been cooked in and served on these ceramic objects in the distant past. As it also presents ancient recipes, this book will also serve as a unique cook book. This generously illustrated book with hundreds of colour photographs and figures not only addresses professionals and students of archaeology, art history, and archaeometry working at all levels but anybody

fascinated by historical ceramics, ceramic materials and production techniques of ancient ceramics. Chronometer Makers of the World Karolinum Press The current publication presents results of the Czech-Uzbekistani archaeological expedition in southern Uzbekistan, particularly on the site of Jandavlattepa. This collaboration originated in 2001 as a joint project of the Archaeological Institute of Uzbekistan in Samarqand and the Institute for Classical

Archaeology, Charles University in Prague. The pilot season took place the next year, in 2002. Since then, every year till 2006, a four to six-week-long excavation campaign under the direction of Kazim Abdullaev and Ladislav Stančo has been organised and a huge amount of archaeological material and data has been collected. This volume should be a starting issue of a number publications which shall present this data. This publication has been divided into three parts.

The first part contains a brief general description of the site and the history of its excavation, as well as geographical and topographical notes. The second and also core part contains a description of the archaeological situations in various sectors of the site. Sector 20, i.e. the citadel, is brought into special focus. The third part of the publication consists of studies devoted to various groups of finds: coins, textile-making implements, weapons and tools, jewellery and clay

figurines and appliqués. A list of all small finds has been attached to the end of the book, with references to the form of depicting them either as a drawing or a photograph, and with reference to those places in the text, where special attention is paid to these finds.

monarchical governments of Southeast Asia, specifically in Hindu-Buddhist cultures, this book examines political thought on the nature of rule.

A Companion to the Global Early Middle Ages Journal of Roman Archaeology

Les fouilles conduites de 1962 à 1965 par la mission archéologique de l'Indus, avec le soutien du Ministère des Affaires étrangères et européennes et la collaboration du département

d'archéologie et des musées du Pakistan, sur le site de Nindowari dans le Balochistan méridional, n'avaient encore jamais été publiées, exception faite d'un court rapport sur les deux premières campagnes. Cette publication reprend l'ensemble de la documentation laissée par

Jean-Marie Casal (1905-1977) sur la seule fouille jamais réalisée d'une agglomération de la culture de Kulli qui, au IIIe millénaire avant notre ère, a été en partie contemporaine de la civilisation de l'Indus. Ces données anciennes, réinterprétées dans le cadre de travaux archéologiques plus

récents, permettent de présenter une véritable synthèse sur l'origine et le développement de la culture de Kulli, ainsi que sur la question de ses relations avec la civilisation de l'Indus et l'ensemble des sites des régions indo-iraniennes au cours du IIIe millénaire avant notre ère.
