Compiling nine authoritative essays spanning an extensive academic career, author Kenneth R. Olwig presents explorations in landscape geography and architecture from an environmental humanities perspective. With influences from art, literature, theatre staging, architecture, and garden design, landscape has come to be viewed as a form of spatial scenery, but this reading captures only a narrow representation of landscape meaning today. This book positions landscape as a concept shaped through the centuries, evolving from place to place to provide nuanced interpretations of landscape meaning. The essays are woven together to gather an international approach to understanding the past and present importance of landscape as place and polity, as designed space, as nature, and as an influential factor in the shaping of ideas in a just social and physical environment. Aimed at students, scholars, and researchers in landscape and beyond, this illustrated volume traces the idea of landscape from the ancient polis and theatre through to the present day.

Sport in American Culture Rand McNally

We tend to think cities look the way they do because of the conscious work of architects, planners and builders. But what if the look of cities had less to do with design, and more to do with social, cultural, financial and political processes, and the way ordinary citizens interact with them? What if the city is a process as much as a design? Richard J. Williams takes the moment construction is finished as a beginning, tracing the myriad processes that produce the look of the contemporary global city. This book is the story of dramatic but unforeseen urban sights: how financial capital spawns empty towering skyscrapers and hollowed-out ghettos; how the zoning of once-illicit sexual practices in marginal areas of the city results in the reinvention of culturally vibrant gay villages; how abandoned factories have been repurposed as creative hubs in a precarious postindustrial economy. It is also the story of how popular urban clichés and the fictional portrayal of cities powerfully shape the way we read and see the bricks, concrete and glass that surround us. Thought-provoking and original, *Why Cities Look the Way They Do* will appeal to anyone who wants to understand the contemporary city, shedding new light on humanity's greatest collective invention.

The Architecture of Survival Rowman & Littlefield

For the last decade, China and India have grown at an amazing rate—particularly considering the greatest downturn in the U.S.

and Europe since the Great Depression. As a result, both countries are forecast to have larger economies than the U.S. or EU in the years ahead. Still, in the last year, signs of a slowdown have hit these two giants. Which way will these giants go? And how will that affect the global economy? Any Western corporation, investor, or entrepreneur serious about competing internationally must understand what makes them tick. Unfortunately, many in the West still look at the two Asian giants as monoliths, closely controlled mainly by their national governments. *Inside Out, India and China* makes clear how and why this notion is outdated. William Antholis—a former White House and State Department official, and the managing director at Brookings—spent five months in India and China, travelling to over 20 states and provinces in both countries. He explored the enormous diversity in business, governance, and culture of these nations, temporarily relocating his entire family to Asia. His travels, research, and interviews with key stakeholders make the unmistakable point that these nations are not the immobile, centrally directed economies and structures of the past. More and more, key policy decisions in India and China are formulated and implemented by local governments—states, provinces, and fast-growing cities. Both economies have promoted entrepreneurship, both by private sector and also local government officials. Some strategies work. Others are fatally flawed. Antholis's detailed narratives of local innovation in governance and business—as well as local failures—prove the point that simply maintaining a presence in Beijing and New Delhi - or even Shanghai and Mumbai—is not enough to ensure success in China or India, just as one cannot expect to succeed in America simply by setting up in Washington or New York. Each nation is as large, vibrant, innovative, diverse, and increasingly decentralized as are the United States, Europe and all of Latin America ... combined. China and India each have their own agricultural heartlands, high-tech corridors, resource-rich areas, and powerhouse manufacturing regions. They also have major economic, social, environmental challenges facing them. But few people outside these countries can name those places, or have a mental map of how the local parts of these countries are shaping their global futures. Organizations, businesses, and other governments that do not recognize and plan for this evolution may miss that the most important changes in these emerging giants are coming from the inside out. "This book is for people who wonder about the inside of China and India, and how different local perspectives inside those countries shape actions outside their borders. Though my family and I spent five months traveling in both countries to do research, this book is not a travelogue. Rather, it is an attempt to sketch how a few of China's and India's many component parts are being shaped by global forces—and in turn are shaping those

forces—and what that means for Americans and Europeans conducting diplomacy and doing business there.”—from the Introduction

From a small town in West Michigan to the wild bush country of Alaska is a long way, but that's where Suzanne Henning ended up. Armed with only a teaching degree from Western Michigan University, she set off with her new husband for Alaska. Starting in Sitka, where there were no teaching jobs available, she took whatever work she could find from hotel maid at the Sitka Hotel to a secretarial job at Sheldon Jackson College. She helped her husband, a surveyor for the Alaska Aviation Division, make ends meet. When she finally landed a teaching position in Savoonga on St. Lawrence Island in the Bering Strait, life began to change. She was teaching a first-grade class of Siberian Yupik children. The problem: the kids didn't speak English, and Henning didn't speak Siberian Yupik. She taught their lessons with the help of two bilingual aides, Apiyeka and Sunqaanga. Both teacher and class reaped benefits from this teaching method and learned a lot from each other. This began a twenty-three-year odyssey of teaching in the Alaskan bush, and along the way, she picked up many skills that would help her deal with a new way of life: baking her own bread in an oil stove how to cook walrus liver, seal meat, and other tasty Eskimo treats the ins and outs of riding a three-wheeler (more difficult than it looks) having only one community phone to the outside and being at the mercy of the phone operator of the day Henning loved her students, and they returned that love. She became a well-respected Alaskan educator, earning not only the famous Milken Award but also the prestigious Presidential Award for Excellence in Science and Mathematics Teaching.

Victoria Johnson's face was made famous on magazine covers, her body the perfect centerfold fantasy, while her winning image served as an advertiser's dream. Thousands of alluring photographs opened doors for her in New York, Hollywood, and the capitals of Europe. And then, as she wrote, "My life changed in that one moment." When Victoria learned she had Stage IV cancer, her grandmother's words came to mind: "Is it time to use the good china?" Victoria Johnson called on her strength and her faith as she chose to become someone who was "living with cancer." For the next 20 years, she became the most informed cancer patient possible, studying and fighting her disease with equal fervor, making sure her life stood as a message for others as she stressed the importance of giving back. Despite the long journey of chemotherapy, miracle drugs, radiation, a double craniotomy, infections, a mastectomy, reconstructive surgery, and seven brain tumors—resulting in lymphedema, osteoporosis, visual impairment, and hearing loss—Victoria spoke out as a survivor, lecturing on the beauty of a life well-led and reflecting on the important issues of courage, conviction, and dedication.

Urban Geography in America, 1950-2000 Routledge

Theatre in the Expanded Field is a fiercely original, bold and daring exploration of the fields of theatre and performance studies and the received narratives and histories that underpin them. Rich with interdisciplinary reference, international, eclectic and broad-ranging in its examples, it offers readers a compelling and provocative reassessment of the disciplines, one that spans

pre-history to the present day. Sixty years ago, in 1962, Richard Southern wrote a remarkable book called *The Seven Ages of the Theatre*. It was unusual in its time for taking a trans-disciplinary, new-historical and avowedly internationalist approach to its subject - nothing less than a totalizing view of its field. Theatre in the Expanded Field does not attempt to mimic Southern's work but rather takes his spirit of adventure and ambition as its frame for the contemporary moment of performance and its diverse pasts. Identifying seven ways of exploring the performance field, from pre-history to postdramatic theatre the book presents studies of both contemporary and historical works not as a chronological succession, but in keeping with their coeval qualities, as movements or 'generations' of connection and interaction, dissensus and interruption. It does this with the same purpose as Richard Southern's original work: to provide for the planning of responsive performance spaces 'now'. Illustrated throughout with line-drawings, Theatre in the Expanded Field is as richly rewarding as it is ambitious and expansive in its vision.

Road trips to Las Vegas are the occasion for this entertaining meditation on the quintessentially American experience of driving across the desert. William Fox, successively exiled from California, Nevada, and New Mexico, has spent more time than most of us driving to Las Vegas—and he has taken notes on three recent trips, his own way of bringing cohesion to the vast and mind-

numbing aspects of the freeway. Approaching the most postmodern city on the planet from three directions, he examines the landscape and what we do to it while also trying to figure out who he is, what that means, and the nature of the transformations of land into landscape through art and architecture, landscape design, and advertising. Fox's history of the region, both natural and cultural, highlights the creep of the urban supergrid across the most extensively traveled desert in the world. This is a profoundly personal, even idiosyncratic book about the most public of subjects—living in the postmodern West at the end of the millennium and what the cities, the freeways, the open spaces, and the billboards tell us about ourselves.

People have designed cities long before there were urban designers. In *Shapers of Urban Form*, Peter Larkham and Michael Conzen have commissioned new scholarship on the forces, people, and institutions that have shaped cities from the Middle Ages to the present day. Larkham and Conzen collect new essays in "urban morphology," the people-centered predecessor to contemporary theories of top-down urban design. *Shapers of Urban Form* focuses on the social processes that create patterns of urban forms in four discrete periods: Pre-modern, early modern, industrial-era and postmodern development. Featuring studies of English, American, Western and Eastern European, and New Zealand urban history and urban form, this collection is invaluable to scholars of urban design and town planning, as well as urban and economic historians.

Germany of the 1920s offers a stunning moment in modernity, a time when surface values first became determinants of taste, activity, and occupation: modernity was still modern, spectacle was still spectacular. Janet Ward's luminous study revisits Weimar Germany via the lens of metropolitan visual culture, analyzing the power that 1920s Germany holds for today's visual codes of consumerism.
