* The present work is designed to provide a practical introduction to aqueous equilibrium phenomena for both students and research workers in chemistry, biochemistry, geochemistry, and interdisciplinary environmental fields. The pedagogical strategy I have adopted makes heavy use of detailed examples of problem solving from real cases arising both in laboratory research and in the study of systems occurring in nature. The procedure starts with mathematically complete equations that will provide valid solutions of equilibrium problems, instead of the traditional approach through approximate concentrations and idealized, infinite-dilution assumptions. There is repeated emphasis on the use of corrected, conditional equilibrium constants and on the checking of numerical results by substitution in complete equations and/or against graphs of species distributions. Graphical methods of calculation and display are used extensively because of their value in clarifying equilibria and in leading one quickly to valid numerical approximations. The coverage of solution equilibrium phenomena is not, however, exhaustively comprehensive. Rather, I have chosen to offer fundamental and rigorous examinations of homogeneous step-equilibria and their interactions with solubility and redox equilibria. Many examples are worked out in detail to demonstrate the use of equilibrium calculations and diagrams in various fields of investigation.

While there were many protests in the 1950s—against racial segregation, economic inequality, urban renewal, McCarthyism, and the nuclear buildup—the movements that took off in the early 1960s were qualitatively different. They were sustained, not momentary; they were national, not just local; they changed public opinion, rather than being ignored. *Women Who Invented the Sixties* tells the story of how four women helped define the 1960s and made a lasting impression for decades to follow. In 1960, Ella Baker played the key role in the founding of the Student Nonviolent Coordinating Committee, which became an essential organization for students during the civil rights movement and the model for the antiwar and women's movements. In 1961, Jane Jacobs published *The Death and Life of Great American Cities*, changing the shape of urban planning irrevocably. In 1962, Rachel Carson published *Silent Spring*, creating the modern environmental movement. And in 1963, Betty Friedan wrote *The Feminine Mystique*, which sparked second-wave feminism and created lasting changes for women. Their four separate interventions helped, together, to end the 1950s and invent the 1960s. *Women Who Invented the Sixties* situates each of these four women in the 1950s—Baker's early activism with the NAACP and the Southern Christian Leadership Conference, Jacobs's work with Architectural Forum and her growing involvement in neighborhood protest, Carson's conservation efforts and publications, and Friedan's work as a labor journalist and the discrimination she faced—before exploring their contributions to the 1960s and the movements they each helped shape.
