Upper Structure Quartals Piano Voicings Alfred Music
Contains written and recorded guitar accompaniment to the entire Volume 54: Maiden Voyage CD. This long awaited book includes easy-to-read music, chord symbols, and guitar frames above each example for the non-reading guitarist. Also included is a CD of Mike playing the voicings with the Maiden Voyage play-along. Special CD stereo separation allows you to eliminate the guitarist and sit in with just the bass and drums. These voicings are real world authentic chord voicings, not simplified sterile examples. It's a great opportunity to not only learn great jazz voicings, but to see how these voicings can be used to navigate blues, rhythm, and great standards. Band directors will love this one because now all members of the rhythm section can practice their comping with this world famous play-along (a book for pianists, drummers, and bassists are also available).

For a jazz piano player, chord voicings is an essential skill, not only for comping (accompanying or laying the chord progression for other players to improvise in) but also to use those voicings as an improvisational aid. All piano players get many melodic ideas or lines from their voicings. There are many ways of practicing and developing a Jazz voicing language. We all know how massive the amount of available combinations is, it seems almost infinite. A standard approach in creating, learning and/or developing voicings is stacking simple voicings/structures on top of other simple ones. In this manner a richer and more complex sound is created. These structures/chords/voicings are usually called Upper Structures Quartals as Structures Quartal voicings have become a standard in modern jazz. Their ambiguity in sound allows the jazz player to travel through unexpected paths, sometimes deceiving, sometimes surprising the listener with their unresolved quality. Although quartals are often used in improvisation and comping, it is not surprising that there is no standard chord notation for them due to its lack of harmonic

direction (or function) and consequentially rarely used by composers as a source in their compositions. Practicing with these books Every book in this collection uses the same practice method. Each exercise targets a specific upper structure triad, or a progression using USQs, and is introduced by a graph of the USQ (or pair of USQs in the case of a IIm-V7 progression) with all its properties (Tensions, Chord Tones, suggested mental picture and other info). A log is included which permit the students to organize their practice routine in blocks of 2 weeks. The student should write the starting day for that block and keep track of their practice on that topic every day. At the end of the block the student should write comments, end date and rate the USQ voicing for later use and review.

The contents of this textbook are training exercises and practical examples. The training sections include various combinations and patterns which will help in developing a jazz-like approach. These exercises can be considered as source material for developing your own ad-lib phrases. As for the practical examples, the phrases included here are not taken literally from any particular jazz pianist, but rather embody well known patterns typical of the bebop and post-bebop eras. Aimed at intermediate students to develop their potential of ad-lib solos, but is also good for beginners to train their fingers and ears for the future.

[Jazz piano voicings for the non-pianist](#) Hal Leonard Corporation " ... Comping for an imaginary soloist, as is done on the Aebersold play-a-long recordings, can be a tricky business. It is ... easy for the comping to turn into a piano chord solo which is far too busy and cluttered up rhythmically or melodically. The soloist is left with no space in which to play. The goal [is] to supply the harmony and play something that feels good so that any soloist will be comfortable playing with the prerecorded rhythm accompaniment. The problem is that the element of interaction is removed. Since there is no soloist playing as the track is recorded, there is no possibility of reacting to rhythmic or harmonic elements that [one] might employ. [Dan Haerle's] approach is to comp as though [he] were an arranger creating a sax or trombone background behind a solo in a jazz band chart ... A good background would generally have some melodic interest (though restrained) and would sound the harmony to support the solo. Also, there would be enough rhythmic life in it to inject some energy into the music and hopefully stimulate the soloist ..."--Dan Haerle.
