Pathways to Learning
Environmental Science: A
Study Guide for Success is
a workbook and study
guide designed to be used
in conjunction with
standard required texts in
environmental science
and environmental
studies courses. Used
over the duration of a
course, it enhances
comprehension, increases
retention, and improves
test scores. The book

contains tear-out pages
that can easily be
attached to class notes or
other course materials.
Chapters feature
questions and fill in the
blank exercises, allowing
students to check their
understanding of the
subject matter, and
assess their progress
early on. Everything in the
book is designed to
answer the question
"What do I need to
know?". The fourteen
chapters of the book
cover the many areas
involved in environmental
science and
environmental studies,
including chemical,
physical, biological, and
earth science principles,
earth spheres, and
biomes. Also covered are
environmental cycles,
material and energy
resources, pollution, and
environmental laws and
regulations. Each chapter
begins with an
explanation of the topic to
be discussed, and
indicates where in a
textbook students can
find complete discussions,
figures, charts and tables.
Chapter exercises are
presented in multiple
choice, fill in the blank,
and matching formats,
allowing students many

opportunities for self-evaluation prior to taking class examinations. Of special note is the Rap City in Green feature of the book, which reviews major concepts in verse form. The musicality of the verses enhances appeal, and is a highly effective memory aid.

Pathways to Learning Environmental Science is an excellent support tool for students in general education environmental science/studies courses. *Environmental Science Study Guide* Princeton Review
