This book contains new translations and a new analysis of the procedure texts of Babylonian mathematical astronomy, the earliest known form of mathematical astronomy of the ancient world. The translations are based on a modern approach incorporating recent insights from Assyriology and translation science. The work contains updated and expanded interpretations of the astronomical algorithms and investigations of previously ignored linguistic, mathematical and other aspects of the procedure texts. Special attention is paid to issues of mathematical representation and over 100 photos of cuneiform tablets dating from 350-50 BCE are presented. In 2-3 years, the author intends to continue his study of Babylonian mathematical astronomy with a new publication which will contain new editions and reconstructions of approx. 250 tabular texts and a new philological, astronomical and mathematical analysis of these texts. Tabular texts are end products of Babylonian math astronomy, computed with algorithms that are formulated in the present volume, Procedure Texts.

Ron Powers's tour de force has been widely acclaimed as the best life and times, filled with Mark Twain's voice, and as a great American story. His life mirrored his country's, as he grew from a Mississippi River boyhood in the days of the frontier, to a Wild-West journalist during the Gold Rush, to become the king of the eastern establishment and a global celebrity as America became an international power. Along the way, Mark Twain keenly observed the characters and voices that filled the growing country, and left us our first authentically American literature.
