An extraordinary confluence of forces stemming from automation and digital technologies is transforming both the world of work and the ways we educate current and future employees to contribute productively to the workplace. The Great Skills Gap opens with the premise that the exploding scope and pace of technological innovation in the digital age is fast transforming the fundamental nature of work. Due to these developments, the skills and preparation that employers need from their talent pool are shifting. The accelerated pace of evolution and disruption in the competitive business landscape demands that workers be not only technically proficient, but also exceptionally agile in their capacity to think and act creatively and quickly learn new skills. This book explores how these transformative forces are—or should be—driving innovations in how colleges and universities prepare students for their careers. Focused on the impact of this confluence of forces at the nexus of work and higher education, the book's contributors—an illustrious group of leading educators, prominent employers, and other thought leaders—answer profound questions about how business and higher education can best collaborate in support of the twenty-first century workforce.

The field of classroom management is not a neatly organized line of inquiry, but rather consists of many disparate topics

and orientations that draw from multiple disciplines. Given the complex nature of the field, this comprehensive second edition of the Handbook of Classroom Management is an invaluable resource for those interested in understanding it. This volume provides up-to-date summaries of research on the essential topics from the first edition, as well as fresh perspectives and chapters on new topics. It is the perfect tool for both graduate students and practitioners interested in a field that is fascinating but not immediately accessible without the proper guidance.

Entrepreneurship is very important for both entrepreneurs and economic development. It helps boost innovation and competitiveness in every country and facilitates the creation of new jobs and new opportunities, especially for family businesses and small and medium enterprises (SMEs). Both entrepreneurship and innovation constitute a subject that is both topical and timeless, since institutions and the various institutional processes have always affected a country's sustainability. Entrepreneurial Development and Innovation in Family Businesses and SMEs is an essential scholarly publication that contributes to the understanding, improving and strengthening of entrepreneurial development, and innovation's role in family businesses and SMEs by providing both theoretical and applied knowledge in order to find how and why entrepreneurship and innovation can produce inefficient and dysfunctional outcomes. Featuring a wide range of topics such as women entrepreneurship, internationalization, and organizational learning, this book is ideal for

researchers, policymakers, entrepreneurs, executives, managers, academicians, and students.
