Iceland truly lived the boom and bust. Once a tiny country on the edge of Europe, in less than two decades it became a global financial powerhouse. This is the story of how one man, one bank and one country experienced and affected the course of world economic history. Armann Thorvaldsson, a former CEO at Kaupthing in the UK, tells the story of how his company was transformed into a £6 billion international bank, by far the largest in his country's history. Helping to build the biggest names in Icelandic business, Thorvaldsson represented the money behind such household names as easyJet, Matalan, Iceland and Karen Millen. As the boom got bigger, the Icelandic bankers worked and played hard with their international clients, including Gordon Ramsay, the Candy brothers, Mike Ashley and Robert Tchenguiz. Moving from Reykjavik to London, Monte Carlo and St Tropez, they seemed unstoppable. Yet, when the bust came, even the most frantic attempts to save the bank were fruitless, leading to the total collapse of the Icelandic economy. Thorvaldsson's reflections on exactly what happened and why, make compelling reading.

The book explores young Arabic-speaking children's English language learning. Through classroom-based research and learner work samples, the book analyses the interplay between cultural norms and the critical role that teachers play in orchestrating classroom discourse through skillful use of available instructional materials, questioning strategies and feedback to learners. The author shows the potential of instructional materials to influence young learners' vocabulary, reading comprehension, and written production, as well as the way they acquire the academic literacies needed in school subjects taught in English. She reviews the spread of the practice of teaching English to young and very young children and the increasing demand for English-medium instruction in the Arabic-speaking region, with a particular focus on the negative transfer from Arabic to English spelling and grammar. The book also discusses the importance of story narratives, arguing they are an ideal medium for language teaching because of their rich linguistic repertoire and the strong motivational force that stories have on young language learners and their cognitive growth, essential to their later academic success. Taken together, the research findings and classroom vignettes suggest that children's language learning happens within a complex system of interactive variables and cultural norms and expectations.

This new anthology includes both classic and contemporary readings on the methods and scope of science. Jeffrey Foss depicts science in a broadly humanistic context, contending that it is philosophically interesting because it has reshaped nearly all aspects of human culture—and in so doing has reshaped humanity as well. While providing a strong introduction to epistemological and metaphysical issues in science, this text goes beyond the traditional topics, enlarging the scope of philosophical engagement with science. Substantial introductions and critical questions are provided for each reading.
