Symbol of power, strength, and freedom, the American bald eagle appears on coins, dollar bills, postage stamps, identification cards, and the presidential seal. It is seen everywhere except in the sky, although that is changing; nearly extinct in 1970, the bald eagle has made a modest comeback. In *Eagle's Plume*, Bruce E. Beans recounts the compelling, centuries-old story of the bald eagle's place in American culture and landscape and its struggle for survival. Reviled by western stockmen as a killer of lambs and calves, the bald eagle has been deified by environmentalists as a reminder of America's natural heritage. When the great national bird was robbed of its habitat and poisoned with pesticides, federal and environmental groups and local communities rallied to save it. Their heroic efforts are chronicled in the book, which also takes the measure and pulse of the bird that so impressed ancient storytellers.

The bald eagle, symbol of the United States, disappeared from much of its range in the lower 48 states because of direct persecution and DDT. Legal protection, including the Bald Eagle Protection Act and the Endangered Species Act, outlawing DDT helped bald eagles to recover across America.

Bald Eagle Habitat Suitability on Melton Hill Reservoir and the Clinch River

The area around Melton Hill Reservoir and sections of the Clinch River along the Oak Ridge Reservation (ORR) provide suitable habitat for bald eagles for both breeding and wintering activities. Primary limitations on habitat suitability appear to be human activity in aquatic habitats and along shoreline areas, and human development along shoreline areas. ORR provides the majority of the suitable habitat because shoreline development is very limited. Four eagle management strategies discussed for ORR include planning development away from high-quality habitats, allowing forest stands near water to mature, conducting timber stand improvement to foster growth and development in pines and hardwoods, and using introductions to foster the development of a breeding population. The primary objective of this project was to make a qualitative assessment of bald eagle habitat suitability along Melton Hill Reservoir and the Clinch River and in adjacent areas on the ORR, including the proposed Advanced Neutron Source site. This survey's aim was to provide ORR managers with an indication of whether suitable habitat exists and, if so, where it occurs on ORR. This information should provide the basis for incorporating eagle management into the overall ORR land management plan.
