This book combines information communication technology (ICT) with the creative interdisciplinary teaching approach known as STEM (science, technology, engineering and mathematics). It introduces STEM and Creative Education and shows (through examples and creative activities) the importance and impact that ICT has for STEM and modern education. The book describes the audio visual classroom, the use of the Internet, Social Networking and STEM and provides STEM lessons for both the real and virtual worlds. Instructors will find this unique textbook to be very useful with students, of various ages, in creative education and engineering classes. This special book offers something for everyone. It serves as a guide for teachers in charge of science fairs and creative classes, especially those which require STEM education. It also includes activities to help develop creative thinking and problem-solving skills and prepares students who plan to become teachers

and mentors of the future. Readers in general can simultaneously enjoy and learn about ICT's impact on STEM and modern education. In addition, e-learning designers and administrators who want to introduce e-learning systems into their organizations can refer to this book as a reference and a resource. The book complements most e-learning and ICT education books which generally focus too much on technical issues.

Bioactive compounds produced by natural sources, such as plants, microbes, endophytic fungi, etc., can potentially be applied in various fields, including agriculture, biotechnology and biomedicine. Several bioactive compounds have proved to be invaluable in mediating plant-microbe interactions, and promoting plant growth and development. Due to their numerous health-promoting properties, these compounds have been widely used as a source of medication since

ancient times. However, there is an unprecedented need to meet the growing demand for natural bioactive compounds in the flavor and fragrance, food, and pharmaceutical industries. Moreover, discovering new lead molecules from natural sources is essential to overcoming the rising number of new diseases. In this regard, natural bioactive compounds hold tremendous potential for new drug discovery. Therefore, this field of research has become a vital area for researchers interested in understanding the chemistry, biosynthetic mechanisms, and pharmacological activities of these bioactive metabolites. This book describes the basics of bioactive plant compounds, their chemical properties, and their pharmacological biotechnological properties with regard to various human diseases and applications in the drug, cosmetics and herbal industries. It offers a valuable asset for all students, educators, researchers, and healthcare experts involved in agronomy, ecology, crop science, molecular biology, stress physiology, and natural products.

Development efforts will remain frustrated so long as corrupt leaders continue to steal their countries' wealth and dispose of these ill-gotten gains in foreign jurisdictions. The prevention of

such looting, and the recovery of the stolen assets are thus critical development issues and a cornerstone of the United Nations Convention against Corruption (2003) (UNCAC). However, to date experience with asset recovery is limited, and a number of legal and other obstacles continue to impede progress. This is the first comprehensive work on asset recovery, written by renowned practitioners and academics representing different legal systems and countries, all of whom have extensive experience in the asset recovery field. The authors notably discuss the 'success stories' of the past (the recovery of the assets of Sani Abacha, Ferdinand Marcos and Vladimiro Montesinos) and the concrete challenges for the future with regard to search, seizure, confiscation and repatriation of stolen assets. The book also provides perspectives on the role of technical assistance and donors in asset recovery and the likely impact of the UNCAC.

This publication takes an integrated approach to combating urban crime and insecurity. Favouring long-term preventive measures over repressive ones, it promotes partnerships designed to tackle crime prevention on several fronts, bringing together the police, the media, schools, the business community, urban planners and local communities. The guide highlights the fact that effective crime prevention is the domain of local authorities, and finds that the consultation and participation of local inhabitants in social and environmental development schemes is particularly important, in order to promote a sense of social cohesion within the community and help to restore lost confidence in the ability of public authorities to deal with crime.

Updated as of May 29, 2018 The Federal Energy Regulatory Commission (Commission) approves Reliability Standard CIP-014-1 (Physical Security). The North American Electric Reliability Corporation, the Commission-certified Electric Reliability Organization, submitted Reliability Standard CIP-014-1 for Commission approval in response to a Commission order issued on March 7, 2014. The purpose of Reliability Standard CIP-014-1 is to enhance physical security measures for the most critical Bulk-Power System facilities and thereby lessen the overall vulnerability of the Bulk-Power System against physical attacks. In addition, the Commission directs NERC to develop one modification to Reliability Standard CIP-014-1 and submit an informational filing. Communications have always been, and are still a vital part of the Army's fighting power. Only with clear and trusted communications can commanders support, control, and lead their units and soldiers. The evolution of electrical communications in the last 150 years has been one of the most important developments humanity has ever witnessed. As the advantages that from ever more complex equipment became apparent the need for a technical arm of the Army, who specialised in communication systems, became apparent. The Royal Corps of Signals was founded in 1920 and since its founding the Corps has been leading the development of communications; delivering them in a variety of operational theatres.

In practice, the design and architecture of a cloud varies among cloud providers. We present a generic evaluation framework for the performance, availability and reliability characteristics of

various cloud platforms. We describe a generic benchmark architecture for cloud databases, specifically NoSQL database as a service. It measures the performance of replication delay and monetary cost. Service Level Agreements (SLA) represent the contract which captures the agreed upon guarantees between a service provider and its customers. The specifications of existing service level agreements (SLA) for cloud services are not designed to flexibly handle even relatively straightforward performance and technical requirements of consumer applications. We present a novel approach for SLA-based management of cloud-hosted databases from the consumer perspective and an end-to-end framework for consumer-centric SLA management of cloud-hosted databases. The framework facilitates adaptive and dynamic provisioning of the database tier of the software applications based on application-defined policies for satisfying their own SLA performance requirements, avoiding the cost of any SLA violation and controlling the monetary cost of the allocated computing resources. In this framework, the SLA of the consumer applications are declaratively defined in terms of goals which are subjected to a number of constraints that are specific to the application requirements. The framework continuously monitors the application-defined SLA and automatically triggers the execution of necessary corrective actions (scaling out/in the database tier) when required. The framework is database platform-agnostic, uses virtualization-based database replication mechanisms and requires zero source code changes of the cloud-hosted software applications.

Nature has consistently provided human beings with bioactive compounds that can be used directly as drugs or indirectly as drug leads. Some of the major classes of natural bioactive compounds include phenolics, alkaloids, tannins, saponins, lignin, glycosides, terpenoids, and many more. They possess a broad range of biological activities and are primarily useful in the treatment of various health issues. At the same time, the search for new and novel drugs is never-ending and, despite major advances in synthetic chemistry, nature remains an essential resource for drug discovery. Therefore, more and more researchers are interested in understanding the chemistry, clinical pharmacology, and beneficial effects of bioactive compounds in connection with solving human health problems. This book presents a wealth of information on natural metabolites that have been or are currently being used as drugs or leads for the discovery of new drugs. In addition, it highlights the importance of natural products against various human diseases, and their applications in the drug, nutraceuticals, cosmetics and herbal industries. Accordingly, the book offers a valuable resource for all students, educators, and healthcare experts involved in natural product research, phytochemistry, and pharmacological research.

This volume examines how and to what extent security officers make use of legal tools. The work identifies these tools and draws on two case-study sites to illustrate how security officers make use of them as well as how they fit in broader security systems to secure compliance. The study also examines the occupational culture of security officers and links them into the broader systems of security that operate to police nodes of governance. The book provides insights for researchers and policy-makers seeking to develop policy for the expanding private security industry.

In examining various aspects of the provision of security, the Small Arms Survey 2011 considers the growth of the private security industry and its firearms holdings worldwide; the firearms

holdings of private security personnel; the use of private security companies by multinational corporations; the use of emerging weapons technology among Western police forces; and legislative controls over the civilian possession of firearms in 42 jurisdictions around the world. Case studies provide original research on ongoing security challenges in Côte d'Ivoire, Haiti and Madagascar. This edition also presents the 2011 Small Arms Trade Transparency Barometer, an estimate of the annual authorized trade in light weapons, and a review of developments related to small arms control at the United Nations.

From the foreword: "One of the High Line's powers is its ability to evoke time, to remind us of the changes we've experienced during our own lives, to bring forth echoes of the past, and to make us guess what life might be like years from now. I love the photos on these pages, because they have that power, too." --Joshua David, Co-Founder of the Friends of the High Line. Ten Avenues Press, in association with Friends of the High Line, announce the publication of *High Line Nudes*. In 2006, photographer Kevin McDermott took three of his friends up on the abandoned railroad tracks that would become New York City's High Line park to shoot a series of nudes. As McDermott states in his introduction, "at the time I took these photos, what I sought from its beauty was its sense of isolation, being alone, surrounded by nature in the middle of this metropolis." A decade later, this location is now one of the most visited tourist destinations in NYC and one of the largest real estate developments in the world. *High Line Nudes* captures a seemingly impossible, but beautiful moment in the history of the West Side Rail Yards, Chelsea and an ever changing New York City. The cloth hardcover book is beautifully printed in color and rich black and white duotone images.

In 1979, a little boy dragging a ginormous fur hat and an overcoat made from the skin of some Soviet woodland creature steps off the plane at New York's JFK International Airport and into his new American life. His troubles are just beginning. For the former Igor Shteyngart, coming to the United States from the Soviet Union is like stumbling off a monochromatic cliff and landing in a pool of Technicolor. Careening between his Soviet home life and his American aspirations, he finds

himself living in two contradictory worlds, wishing for a real home in one. He becomes so strange to his parents that his mother stops bickering with his father long enough to coin the phrase failurchka—"little failure"—which she applies to her once-promising son. The past decade has seen rapid growth in the private security industry, both in Africa and globally. Private security companies have diversified their activities to include military advice and training, arms procurement, intelligence gathering, logistical and medical support and in limited instances, combat and operational support. As a result many African governments have engaged the services

of internationally-operating private security companies, such as the American firms MPRI (Military and Professional Resources International), Dyncorp and PAE (Pacific Architects and Engineers), while more 'traditional' security companies such as Saracen, Gray Security and others are active in a number of countries such as Kenya, Uganda and South Africa.
