Margaret of York, Simon
Marmion, and The Visions
of Tondal Heise Medien

A pioneering examination
of the three-
dimensionality of the
earth from the
perspective of history and
the humanities. This book

considers the variegated world of mountains and their development during the last 500 years. It takes as its starting point the United Nations environmental conference of 1992 in Rio de Janeiro, where the mountains were officially recognised as a topic of the world community. Important precedents for this new agenda were built in the early modern period and

in the nineteenth century, as European societies began to exceed their traditional limitations. The book begins with an investigation of this long-term process with respect to science, culture and politics, each of which has transformed our attitudes toward mountainous regions. It then takes up historical problems that have been debated in the latest research, placing

them in a comparative framework. At the book's heart stands the question of whether and in what way the 'three-dimensional history' of mountain people may reveal distinctive forms of development.

A multidecadal cooling is known to have occurred in Europe in the final decades of the sixteenth-century. It is still open to debate as to what might have caused the underlying shifts in

atmospheric circulation and how these changes affected societies. This book is the fruit of interdisciplinary cooperation among 37 scientists including climatologists, hydrologists, glaciologists, dendroclimatologists, and economic and cultural historians. The known documentary climatic evidence from six European countries is compared to results of tree-ring studies. Seasonal temperature and precipitation are estimated from this data

and monthly mean surface pressure patterns in the European area are reconstructed for outstanding anomalies. Results are compared to fluctuations of Alpine glaciers and to changes in the frequency of severe floods and coastal storms. Moreover, the impact of climate change on grain prices and wine production is assessed. Finally, it is convincingly argued that witches at that time were burnt as scapegoats for climatic change.

Experience the infinite varieties of snow in the Alps through the lens of famed Austrian landscape photographer Peter Mathis. Renowned for his gorgeous mountain scenes and spectacular

photos of winter athletes, Peter Mathis has chosen black-and-white film to capture the essence of snow in this book. These stunning duotone images render a traditional Alpen landscape into painterly canvases that are in turns otherworldly, sensuous, haunting, and heavenly. Skiers' tracks zig and zag through the powder and windswept waves of snow undulate like desert sand. Impeccably reproduced in large, full-bleed format, these images showcase an enormous palette, from the deepest black to

the most immaculate white, and every imaginable tone in between. Mathis's texts recall the instances of each shot, many of which require days of trekking through mountains with nearly fifty pounds of equipment strapped to his back. Reminiscent of the works of Ansel Adams and Edward Weston, Mathis's photographs perfectly evoke the biting cold, blazing sun, deep shadows, and blinding lights that make the Alps a uniquely beautiful landscape and snow a

powerful force of nature. *Jahrbuch des österreichischen Alpen-Vereines* Abrams

 Fashion and wisdom from style rebels in New York City and beyond In a world where stores, clothes, and trends have become increasingly standardized, fashion is one of the most powerful

ways to explore and express our personalities, identities, and individuality. For years, renowned photographer Robbie Quinn has come across style rebels and bold expressionists on the streets of NYC and the world's largest cities, stopping them for impromptu photoshoots and testimonials. He's even given these eccentric lovers of style a name: Street Unicorns. In these pages, Quinn shares the portraits, viewpoints, and aspirations of more than 250 Street Unicorns

with the hopes of inspiring readers to rediscover the most authentic parts of themselves. A vibrant declaration against ageism, racism, homophobia, and all other discriminations, this book is a love letter to those who aren't afraid to stand out, embrace nonconformity, and share who they are with the world.

John Wiley & Sons
European Accountancy Yearbook is the first annual reference work to focus on the emerging Pan-European accounting scene. Following numerous international mergers and syndicate formations large

accountancy firms are competing to provide services to international corporations and businesses with cross-border trade. The Yearbook provides a one-stop reference source allowing financial directors of these companies to find out which accountancy firms are providing what services and where. It will also provide great assistance to other accountancy and financial services organisations to evaluate the state of the fast growing European

market, and to assess competitors or possible partners. The Yearbook includes profiles of all the major firms showing the international coverage, their services offered, fee income, partners, branch offices, etc. In addition the Yearbook includes invaluable reference data such as country by country accountancy scene overview, corporate tax rates, E.C. directives, etc.

Artificial Intelligence (AI)
in Healthcare is more than

a comprehensive introduction to artificial intelligence as a tool in the generation and analysis of healthcare data. The book is split into two sections where the first section describes the current healthcare challenges and the rise of AI in this arena. The ten following chapters are written by specialists in each area, covering the whole healthcare ecosystem. First, the AI applications in drug design and drug development are presented followed by its

applications in the field of cancer diagnostics, treatment and medical imaging. Subsequently, the application of AI in medical devices and surgery are covered as well as remote patient monitoring. Finally, the book dives into the topics of security, privacy, information sharing, health insurances and legal aspects of AI in healthcare. Highlights different data techniques in healthcare data analysis, including machine learning and data mining Illustrates

different applications and challenges across the design, implementation and management of intelligent systems and healthcare data networks Includes applications and case studies across all areas of AI in healthcare data

Stretching 1,200 kilometres across six countries, the colossal mountains of the Alps dominate Europe, geographically and historically.

Enlightenment thinkers felt the sublime and magisterial peaks were the very embodiment of nature, Romantic poets looked to them for divine inspiration, and Victorian explorers tested their ingenuity and courage against them. Located at the crossroads between powerful states, the Alps have played a crucial role in the formation of European history, a place of intense cultural fusion as well as fierce conflict between warring nations. A diverse range of flora and fauna have made

themselves at home in this harsh environment, which today welcomes over 100 million tourists a year. Leading Alpine scholar Jon Mathieu tells the story of the people who have lived in and been inspired by these mountains and valleys, from the ancient peasants of the Neolithic to the cyclists of the Tour de France. Far from being a remote and backward corner of Europe, the Alps are shown by Mathieu to have been a crucible of new ideas and technologies at the heart

of the European story.

 Die Alpen gelten mindestens seit Jean-Jacques Rousseau als Verkörperung der Natur und damit als Gegenpol der Zivilisation - Grund genug, um die Geschichte dieser europäischen Gebirgsregion kaum wahrzunehmen bzw. den sechs Nationalstaaten zu überlassen, die sich heute in sie teilen. Dieses Buch führt durch die gemeinsame Geschichte des Alpenraumes vom

Ausgang des Mittelalters bis 1900 und untersucht Bevölkerung, Wirtschaft und Umwelt. Die politischen Kraftverhältnisse, ökologische Fragestellungen und die aktuelle Diskussion um eine künftige Alpenpolitik fließen mit ein. Wie gestaltete sich die langfristige Beziehung zwischen Bevölkerung, Wirtschaft und Umwelt? Und wie wirkten sich politische Kräfte auf die Verfassung und Gesellschaft aus?

 A richly illustrated book on the history of climate

change in Europe. Two perspectives, one unique book: two leading experts, a historian and a climatologist, co-author a new standard work on climate history. An overview of the connection between climatic and social developments over the last 1000 years. For the first time, a historian and a climatologist with knowledge of climate history have worked closely together to create a unique book, combining climate reconstructions based on documented

data in their human-historical context with temporally highly resolved analyses of climate and glaciers. "Here we can clearly see how changes in climate affected the environment and people of Europe over many centuries, with important lessons for the future. A wonderfully engaging and well-documented account by two of Europe's leading climate scientists." Prof. Dr. Raymond Bradley, Director, Climate System Research Center, University of Massachusetts, Amherst

(USA) "This unique book provides new fascinating insights into the interaction of past climate and society in Europe. It can be highly recommended to climatologists, historians and geoscientists, but also to students and the broad public." Prof. Dr. Rudolf Brázdil, Department of Geography, Masaryk University, Brno (Czech Republic) "The authors offer a truly interdisciplinary combination of history and science in order to

explore the complex relationships of climate and society over the past millennium. They demonstrate convincingly that climate change is nothing new while at the same time revealing the character of the unprecedented climatic epoch mankind now faces." Prof. Dr. Jan de Vries, Professor Emeritus of History and Economics, University of California, Berkeley (USA) Christian Pfister is Professor Emeritus of Economic, Social and Environmental History at the University

of Bern, Switzerland. He was founding president of the European Society for Environmental History (ESEH). Heinz Wanner is Professor Emeritus of Geography and Climatology. He was co-chair of the international Past Global Changes (PAGES) project and a member of the UN Intergovernmental Panel on Climate Change (IPCC). Alpine Trials & Rallies

After the dissolution of the Austro-Hungarian Monarchy, Austria transformed itself from an empire to a small Central European country.

Formerly an important player in international affairs, the new republic was quickly sidelined by the European concert of powers. The enormous losses of territory and population in Austria's post-Habsburg state of existence, however, did not result in a political,

economic, cultural, and intellectual black hole.

The essays in the twentieth anniversary volume of Contemporary Austrian Studies argue that the small Austrian nation found its place in the global arena of the twentieth century and made a mark both on Europe and the world. Be it Freudian psychoanalysis, the “fin-de-siècle” Vienna culture of modernism, Austro-Marxist thought, or the Austrian School of Economics, Austrian thinkers and ideas were

still wielding a notable impact on the world.

Alongside these cultural and intellectual dimensions, Vienna remained the Austrian capital and reasserted its strong position in Central European and international business and finance. Innovative Austrian companies are operating all over the globe. This volume also examines how the globalizing world of the twentieth century has impacted Austrian demography, society, and political life. Austria's

place in the contemporary world is increasingly determined by the forces of the European integration process. European Union membership brings about convergence and a regional orientation with ramifications for Austria's global role. Austria emerges in the essays of this volume as a highly globalized country with an economy, society, and political culture deeply grounded in Europe. The globalization of Austria, it appears, turns out to be in many instances an

“Europeanization”.
