Written to provide all readers with an opportunity to learn and demonstrate computer and Internet literacy. Computer Literacy for IC3 was written to align with a certification called "Internet and Computing Core Certification (IC3)". This certification is for users who want to demonstrate critical

computer and Internet skills valued in today's academic and professional environments. The Computer Literacy for IC3 text is written to meet the certification standards and provide readers with a broad understanding of the key components of computer literacy in order to prepare for the exam. This certification has 3 units: \* Unit 1: Computing Fundamentals (computer concepts) \* Unit 2: Using Productivity Software \* Unit 3: Living Online (the Internet) Each of these

units is available as a separate Computer Literacy for IC3 text. This text contains: Unit 1: Computing Fundamentals and covers basic computer concepts including computer hardware, computer software, and using an operating system. The second edition of Computer Literacy for IC3 has been revised to keep up with the IC3 program's evolution, which reflects the recent changes in computers and technology. Instead of publishing one large,

comprehensive text, the three units are now available as separate, smaller texts.

 In recent years, distance education programs have grown to allow greater educational opportunities to a diverse set of

learners from all over the world. As remote learning becomes a widespread practice, universities too must adapt to this changing educational landscape. Critical Examinations of Distance Education Transformation across Disciplines provides an interdisciplinary look at the development of distance learning in higher education. This reference work bridges the gap between disciplines by offering practical tools and solutions for successful

distance education implementation.

Educators, administrators, and researchers across academia will find this publication a timely and relevant resource.

When online learning began more than two decades ago, many universities envisioned the creation of international student markets, but this has only recently become a reality. The emergence of a

global economy, advances in technology, increased market competition, reduced funding, and the growing desire for degrees from internationally recognized universities have created opportunities that promote transnational degrees. Transnational Distance Learning and Building New Markets for Universities presents the opportunities, methods, issues, and risks involved in extending university education across national borders. It is important to understand cultural,

financial, and legal issues, as well as management approaches, academic delivery options, and business considerations needed to create quality programs that are marketable and cost effective in reaching emerging international markets. The purpose of the book is to review how to reach emerging international markets, increase access to education, and do so at a profit.

As with any industry, the

education sector goes through frequent changes due to modern technological advancements. It is every educator's duty to keep up with these shifting requirements and alter their teaching style to best fit the needs of their classroom. Pre-Service and In-Service Teacher Education: Concepts, Methodologies, Tools, and Applications explores the current state of pre-service teacher programs as well as continuing education initiatives for in-service educators. It

also emphasizes the growing role of technology in teacher skill development and training as well as key pedagogical developments and methods. Highlighting a range of topics such as teacher preparation programs, teaching standards, and fieldwork and practicum experiences, this multi-volume book is designed for pre-service teachers, teacher educators, researchers, professionals, and academics in the

education field.
