For everyone who's ever said, “I'm no good with numbers,” here's a practical, user-friendly field guide to the math you really need. Your dinner bill came to \$78.35, plus tip, divided amongst you and two friends. So how did you end up paying \$50? In life, there are plenty of instances where a quick calculation would come in handy. Contrary to popular belief, the ability to calculate a

tip, eyeball square area, or convert kilometers to miles—without using your fingers or moving your lips—is not inborn. Everyday math skills can be painlessly learned and easily mastered, transforming you from a person who doesn't know the meaning of APR into someone who understands credit card rates and their long-term impact on your wallet. Broken into sections which review basic arithmetic from fractions to percents, provide situational problems from cooking to gambling, and demystify terms from statistics to relative magnitude to probability, this is the one guide that anyone who took "Math for English majors" can't live without.

The compelling true story of Dr. Jonas Salk's quest to develop a vaccine for polio. In 1916, the United States was hit with one of the worst polio epidemics in history. The disease was a terrifying enigma: striking out of nowhere, it afflicted tens of thousands of children and left them—literally overnight—paralyzed. Others it simply killed. At the same time, a child named Jonas Salk was born.... When Franklin Delano Roosevelt was diagnosed with polio shortly before assuming the Presidency, Salk was given an impetus

to study this deadly illness. After assisting in the creation of an influenza vaccine, Salk took up the challenge. His progress in combating the virus was hindered by the politics of medicine and by a rival researcher determined to discredit his proposed solution. But Salk's perseverance made history—and for close to seventy years his vaccine has saved countless lives, bringing humanity close to eradicating polio throughout the world. *Splendid Solution* chronicles Dr. Salk's race against time to achieve an unparalleled breakthrough that made him a cultural hero and icon of modern medicine.

Princeton Review realizes that acing the ACT is very different from getting straight As in school. They don't try to

teach students everything there is to know about math, reading, and English--only the techniques they'll need to score higher on the ACT. There's a big difference. In *Cracking the ACT*, TPR will teach test takers how to think like the test makers and:

- *Use process of elimination to eliminate answer choices that look right but are planted to fool test takers
- *Ace the English test by learning how to spot sentence structure, grammar, and punctuation errors quickly
- *Crack algebra problems by Plugging In numbers in place of letters
- *Score higher on reading comprehension by learning to zero in on main ideas, topic sentences, and key words
- *Solve science reasoning problems by scanning the passage for critical words

This book includes *The Princeton Review Assessment*, a full-

length diagnostic exam that will predict test takers approximate scores on both the ACT and the SAT. The questions on this test are just like the ones test takers will find on the real ACT and SAT.

Performing the Matrix. Mediating Cultural Performances presents a collection of case studies and analyses dealing with performances of the matrix that take up questions of identities and

social thinking, visualization and perception, the discursive power of texts and historiographic paradigms, and artistic strategies of political intervention. Since 1999 The Matrix has become a popular catchword through the homonymous Wachowski brothers' movie. As both a traditional concept and a popular phenomenon, <matrix> can take on a new value when reconsidered in the light of performance studies. A behind-the-scenes look at theatre, performance, political activism and events may reveal a productive mediating structure that can metaphorically be described as a matrix. This mediating structure and its materializations are fundamentally reshaping modern culture. Accordingly <politics of visibility>, <media

networking>, <telepresence> and <liveness> are considered to be understood as performances of the matrix. If so, how does this understanding of cultural performances <as always already mediatized> influence contemporary concepts of performance and media?
