Teach math lessons through the creative means of a life story Provide 36 weeks of instruction based on skill levels rather than grade levels Guide students by the use of inexpensive manipulatives, including index cards, dried beans, and construction paper! We often tend to compartmentalize when teaching children. In real life, there aren't artificial barriers between "subjects." For example, when you are cooking or baking, you have to use the skills of reading, logical thinking, and measuring, just to name a few. In driving a car, you see and read road signs, read maps, and count miles. So why do we say to children, "This is math, this is language, this is about science and nature, and this is history"? The most natural and effective means to teach children is through life examples. Content, story, and the ability to show math in real life make a living math book!

Two leaders, one burning mission: restoration. When the people of Israel returned to Jerusalem after their exile in Babylon, they found the city laid waste, the temple destroyed, and their way of life obliterated. Out of the ashes of this devastation, two leaders emerged to restore the foundations of their worship and their city. Ezra, the first to return, set out to restore true worship in Jerusalem by reminding the people of God's teaching, what it meant for them, and how it should shape their lives.

Nehemiah, the next to arrive, exchanged his royal cupbearer's robes for coveralls and got to work rebuilding the wall. The project took twelve years and was an uphill battle all the way. The efforts of these men reveal just how much God can accomplish in our lives when we follow where he leads. As you read, study, journal, and discuss the books of Ezra and Nehemiah, watch for these key themes that Max will unpack throughout the book: When the Hebrews were allowed to return home their spiritual restoration was as important as their national restoration. Restoring the temple was a significant step in the spiritual restoration of the people. The idolatry of the Hebrews was rooted in foreign wives who continued to worship their false gods. This is why the men were asked to divorce their foreign wives. The Life Lessons with Max Lucado series brings the Bible to life in twelve lessons filled with intriguing questions, inspirational stories, and poignant reflections to take you deeper into God's

Word. Each lesson includes: An opening reflection on the Bible book you're studying. Background information to deepen your understanding of the cultural and historical setting. An excerpt of the text (from the NIV and the NKJV). Exploration questions with plenty of room to write your own thoughts and notes. Inspirational thoughts from Max as well as a closing takeaway for further reflection. The Life Lessons series is ideal for use in both a small-group setting or for individual study.

Life is a journey that includes laughter and also tears. It is sometimes a voyage of questions and doubts, but it can be a journey of faith. In this personal narrative and devotional, author Heather McCormick tells her story of facing infertility, caregiving, grief, and other challenges. *A Journey of Faith* openly shares her emotions, questions, doubts, and struggles, but it also records the faithfulness of God along this unexpected journey and the wisdom He taught her through the fires. Of the lessons that she shares, some teach about God's faithfulness, His goodness, His comfort, His healing, His presence, His perfect timing, His sovereignty, and His answers to prayers. Others focus on faith, forgiveness, grace, love, humility, grief, laughter, peace, and spiritual warfare. In *A Journey of Faith*, McCormick communicates that God is at work in the problems you face. He is with you always and uses the problems to teach you. She shows the importance of continuing on the faith journey and learning to walk by faith with God.

Radically open dialectical behavior

therapy (RO DBT) is a groundbreaking, transdiagnostic treatment model for clients with difficult-to-treat overcontrol (OC) disorders, such as anorexia nervosa, chronic depression, and obsessive-compulsive disorder (OCD). Written by the founder of RO DBT, Thomas Lynch, this is the first and only session-by-session training manual to help you implement this evidence-based therapy in your practice. As a clinician, you're familiar with dialectical behavioral therapy (DBT) and its success in treating clients with emotion dysregulation disorders. But what about clients with overcontrol disorders? OC has been linked to social isolation, aloof and distant relationships, cognitive rigidity, risk aversion, a strong need for structure, inhibited emotional expression, and hyper-perfectionism. And yet—perhaps due to the high value our society places on the capacity to delay gratification and inhibit public displays of destructive emotions and impulses—problems linked with OC have received little attention or been misunderstood. Indeed, people with OC are often considered highly successful by others, even as they suffer silently and alone. RO DBT is based on the premise that psychological well-being involves the confluence of three factors: receptivity, flexibility, and social-connectedness. RO DBT addresses each of these important factors, and is the first treatment in the world to prioritize social-signaling as the primary mechanism of change based on a transdiagnostic, neuroregulatory model linking the communicative function of human emotions to the establishment of social connectedness and well-being. As such, RO DBT is an invaluable resource for treating an array of disorders that center around overcontrol and a lack of

social connectedness—such as anorexia nervosa, chronic depression, postpartum depression, treatment-resistant anxiety disorders, autism spectrum disorders, as well as personality disorders such as avoidant, dependent, obsessive-compulsive, and paranoid personality disorder. In this training manual, you'll find an outline of RO DBT, including history, research, and how it differs from traditional DBT. You'll also find a session-by-session RO DBT outpatient treatment protocol, with sections that outline the weekly, one-hour individual therapy sessions and weekly two-and-a-half hour skills training classes that occur over a period of approximately thirty weeks. This includes instructor guidelines and user-friendly worksheets. The feasibility, acceptability, and efficacy of RO DBT is evidence-based and informed by over twenty years of translational treatment development research. This important manual—along with its companion book, *Radically Open Dialectical Behavior Therapy* (available separately), distills the essential components of RO DBT into a workable program you can start using right away to improve treatment outcomes for clients suffering with OC. Combinatorial optimization is the process of finding the best, or optimal, solution for problems with a discrete set of feasible solutions. Applications arise in numerous settings involving operations management and logistics, such as routing, scheduling, packing, inventory and production management, location, logic, and assignment of resources. The economic impact of combinatorial optimization is profound, affecting sectors as diverse as transportation (airlines, trucking, rail, and shipping), forestry, manufacturing, logistics, aerospace, energy (electrical power, petroleum, and natural gas), telecommunications, biotechnology, financial services, and agriculture. While much progress has been made in finding exact (provably optimal) solutions to some combinatorial optimization problems, using techniques such as dynamic programming, cutting planes, and branch and cut methods, many hard combinatorial problems are still not solved exactly and require good heuristic methods. Moreover, reaching "optimal solutions" is in many cases meaningless, as in practice we are often dealing with models that are rough simplifications of reality. The aim of heuristic methods for combinatorial optimization is to quickly produce good-quality solutions, without necessarily providing any guarantee of solution quality. Metaheuristics are high level procedures that coordinate simple heuristics, such as local search, to find solutions that are of better quality than those found by the simple heuristics

alone: Modern metaheuristics include simulated annealing, genetic algorithms, tabu search, GRASP, scatter search, ant colony optimization, variable neighborhood search, and their hybrids.
