The Bicycle Coloring Book Oxford University Press, USA

A celebrated science and health reporter offers a wry, bracingly honest account of living with anxiety. A racing heart. Difficulty breathing. Overwhelming dread. Andrea Petersen was first diagnosed with an anxiety disorder at the age of twenty, but she later realized that she had been experiencing panic attacks since childhood. With time her symptoms multiplied. She agonized over every odd physical sensation. She developed fears of driving on highways, going to movie theaters, even licking envelopes. Although having a name for her condition was an enormous relief, it was only the beginning of a journey to understand and master it—one that took her from psychiatrists' offices to yoga retreats to the Appalachian Trail. Woven into Petersen's personal story is a fascinating look at the biology of anxiety and the groundbreaking research that might point the way to new treatments. She compares psychoactive drugs to non-drug treatments, including biofeedback and exposure therapy. And she explores the role that genetics and the environment play in mental illness, visiting top neuroscientists and tracing her family history—from her grandmother, who, plagued by paranoia, once tried to burn down her own house, to her young daughter, in whom Petersen sees shades of herself. Brave and empowering, this is essential reading for anyone who knows what it means to live on edge.

Journey to the Edge of the Flat Earth Quercus

Thousands of ravenous tiny shorebirds race along the water's edge of Delaware Bay, feasting on pin-sized horseshoe-crab eggs. Fueled by millions of eggs, the migrating red knots fly on. When they arrive at last in their arctic breeding grounds, they will have completed a near-miraculous 9,000-mile journey that began in Tierra del Fuego. Deborah Cramer followed these knots, whose numbers have declined by 75 percent, on their extraordinary odyssey from one end of the earth to the other—from an isolated beach at the tip of South America all the way to the icy tundra. In her firsthand account, she explores how diminishing a single stopover can compromise the birds' entire journey, and how the loss of horseshoe crabs—ancient animals that come ashore but once a year—threatens not only the survival of red knots but also human well-being: the unparalleled ability of horseshoe-crab blood to detect harmful bacteria in vaccines, medical devices, and intravenous drugs safeguards human health. Cramer offers unique insight into how, on an increasingly fragile and congested shore, the lives of red knots, horseshoe crabs, and humans are intertwined. She eloquently portrays the tenacity of small birds and the courage of many people who, bird by bird and beach by beach, keep red knots flying.

This volume offers a crucial examination of right-wing extremism, supported by detailed empirical analyses of right-wing militants' experiences within and outside their organizations. The authors delve deeply into the motivations that prompt initial membership in these groups, the elements that make membership appealing, and the factors that ultimately cause members to leave. Interpreting the present empirical data within their psychological theory of radicalization, the authors determine the commonalities and differences between instances of radicalization and derive policy-relevant implications to combat right-wing extremism. In a turbulent global environment where this strain of extremist ideology has gained more mainstream popularity, this book is a critical and timely addition to scholarship on radicalization by leading experts in the field.

"Remarkable: a book about borders that makes the reader feel sumptuously free." —Peter

Pomerantsev In this extraordinary work of narrative reportage, Kapka Kassabova returns to Bulgaria, from where she emigrated as a girl twenty-five years previously, to explore the border it shares with

Turkey and Greece. When she was a child, the border zone was rumored to be an easier crossing point into the West than the Berlin Wall, and it swarmed with soldiers and spies. On holidays in the "Red Riviera" on the Black Sea, she remembers playing on the beach only miles from a bristling electrified fence whose barbs pointed inward toward the enemy: the citizens of the totalitarian regime. Kassabova discovers a place that has been shaped by successive forces of history: the Soviet and Ottoman empires, and, older still, myth and legend. Her exquisite portraits of fire walkers, smugglers, treasure hunters, botanists, and border guards populate the book. There are also the ragged men and women who have walked across Turkey from Syria and Iraq. But there seem to be nonhuman forces at work here too: This densely forested landscape is rich with curative springs and Thracian tombs, and the tug of the ancient world, of circular time and animism, is never far off. *Border* is a scintillating, immersive travel narrative that is also a shadow history of the Cold War, a sideways look at the migration crisis troubling Europe, and a deep, witchy descent into interior and exterior geographies.

Do not regret having missed the chance to realize your dreams, for you may just have fulfilled it in another universe.. * Are the trillions of atoms that make you, nothing but vibrations in 10 dimensions? *Is it true that we are all connected with each other? *Can you go into the future to change the present? * Why do scientists and philosophers struggle with the concept of Time? * Can science explain consciousness through physics? * Is our fate driven by the underlying randomness in nature? * Is nature hiding the best kept secrets which can never be unravelled by humans? The Speed of Time approaches the most complex and esoteric theories of science in lucid, clear and simple language and in the style of a thriller, leaving you wanting more—while addressing questions through the enigmatic theories in Physics such as Quantum Mechanics, Einstein's Theory of Relativity, Time, Chaos, and much more. There's a whole universe out there... Imagine you had a spacecraft capable of travelling through interstellar space. You climb in, blast into orbit, fly out of the solar system and keep going. Where do you end up, and what do you see along the way? The answer is: mostly nothing. Space is astonishingly, mind-blowingly empty. As you travel through the void between galaxies your

spaceship encounters nothing more exciting than the odd hydrogen molecule. But when it does come across something more exotic: wow! First and most obviously, stars and planets. Some are familiar from our own backyard: yellow suns, rocky planets like Mars, gas and ice giants like Jupiter and Neptune. But there are many more: giant stars, red and white dwarfs, super-earths and hot Jupiters. Elsewhere are swirling clouds of dust giving birth to stars, and infinitely dense regions of space-time called black holes. These clump together in the star clusters we call galaxies, and the clusters of galaxies we call... galaxy clusters. And that is just the start. As we travel further we encounter ever more weird, wonderful and dangerous entities: supernovas, supermassive black holes, quasars, pulsars, neutron stars, black dwarfs, quark stars, gamma ray bursts and cosmic strings. A Journey Through The Universe is a grand tour of the most amazing celestial objects and how they fit together to build the cosmos. As for the end of the journey - nobody knows. But getting there will be fun.

History carves its imprint on human lives for generations after. When we think of the radical changes that transformed America during the twentieth century, our minds most often snap to the fifties and sixties: the Civil Rights Movement, changing gender roles, and new economic opportunities all point to a decisive turning point. But these were not the only changes that shaped our world, and in *Living on the Edge*, we learn that rapid social change and uncertainty also defined the lives of Americans born at the turn of the twentieth century. The changes they cultivated and witnessed affect our world as we understand it today. Drawing from the iconic longitudinal Berkeley Guidance Study, *Living on the Edge* reveals the hopes, struggles, and daily lives of the 1900 generation. Most surprising is how relevant and relatable the lives and experiences of this generation are today, despite the gap of a century. From the reorganization of marriage and family roles and relationships to strategies for adapting to a dramatically changing economy, the challenges faced by this earlier generation echo our own time. *Living on the Edge* offers an intimate glimpse into not just the history of our country, but the feelings, dreams, and fears of a generation remarkably kindred to the present day.

Beachy Head is a bit of quintessential England—a seaside promontory where green pastures roll to the edge of chalk cliffs, a place of sheep and wind and ineffable beauty. But it is also a major

landmark on the map of self-inflicted death. Since 1965, some five hundred people have ended their lives by jumping or driving or simply walking off the 535-foot cliffs, making Beachy Head one of the most popular suicide spots in the world. And still they come, every week another one or two—the young and the old, the terminally ill and the vigorously healthy, the bereft, the insane, the despairing. Why here? Why so many? One chilly English spring, American writer and teacher Tom Hunt left his home and family and journeyed to this bucolic landscape to find out. In a narrative that seamlessly weaves together personal memoir, history, travelogue, and investigative journalism, Hunt recounts a season of disturbing revelations (including that Princess Diana allegedly came here intending to jump). Still reeling from a suicide in his own family, Hunt arrives in England obsessed with Beachy Head's grisly mystique, yet utterly unsure of what he would discover. Gradually, with typical English reserve, the people who haunt this extraordinary place release their secrets. Servers in the local tavern—known among residents as the Last Stop Pub—whisper about their encounters with hollow-eyed men and women in their final hours. The celebrated local witch asserts his belief that the place was once used for human sacrifice. The kindly coroner provides access to suicide notes, photographs, and the Sudden Death file. "It's a very cold solution," confides a wheelchair-bound ex-hippie who miraculously survived his own jump. In the course of wrenching interviews with bereft family members, watchful taxi drivers, and brave rescue workers, it dawns on Hunt that in each of us is a will to die every bit as tenacious and unyielding as the desire to live—and that Beachy Head stiffens and heightens this death wish. It's a stage that all but begs to be leapt from. A work of terrible sadness and harrowing revelations, *Cliffs of Despair* is the account of an unforgettable journey to a place where beauty and death collide.
