Learn how to apply artificial intelligence, engineering, and machine learning to create smart robots capable of interacting with their environment, engaging with users, making decisions, and navigating autonomously Key Features Gain a holistic understanding of robot design, systems engineering, and task

analysis Implement AI/ML techniques to detect and manipulate objects and navigate robots using landmarks Integrate voice and natural language interactions to create a digital assistant and artificial personality for your robot Purchase of the print or Kindle book includes a free PDF eBook Book DescriptionUnlock the potential of your robots by enhancing their perception with cutting-edge artificial intelligence and machine learning techniques. From neural networks to computer vision, this book equips you with the tools and practical use cases to create truly smart robots. Starting with robotics basics, robot architecture, control systems, and decision-making theory, this book presents systems-engineering methods to design problem-solving robots with single-board computers. You'll explore object recognition and genetic algorithms to teach your robot to identify and pick up objects, and you'll also harness the power of natural language processing to give your robot a voice. To enhance your robot further, you'll master neural networks to classify and separate objects and navigate autonomously, before advancing to guiding your robot arms using reinforcement learning and genetic algorithms. The book also covers path planning and goal-oriented programming to prioritize your robot's tasks, showing you how to connect all software using Python and ROS 2 for a seamless experience. By the end of this book, you'll have learned how to transform your robot into a helpful assistant with NLP and give it an artificial personality, ready to tackle real-world tasks and even crack jokes.What you will learn Get started with robotics and AI essentials Understand path planning, decision trees, and search algorithms to enhance your robot Explore object recognition using neural networks and supervised learning techniques

Employ genetic algorithms to enable your robot arm to manipulate objects Teach your robot to listen using Natural Language Processing through an expert system Program your robot in how to avoid obstacles and retrieve objects with machine learning and computer vision Apply simulation techniques to give your robot an artificial personality Who this book is for This book is for practicing robotics engineers and enthusiasts aiming to advance their skills by applying AI and ML techniques. Students and researchers looking for practical guidance for solving specific problems or approaching a difficult robot design will find this book insightful. Proficiency in Python programming, familiarity with electronics and wiring, single board computers, Linux-based command-line interface (CLI), and knowledge of AI/ML concepts are required to get started with this book.

Cambridge University Press

The Climate Planner is about overcoming the objections to climate change mitigation and adaption that urban planners face at a local level. It shows how to draft climate plans that encounter less resistance because they involve the public, stakeholders, and decisionmakers in a way that builds trust, creates consensus, and leads to implementation. Although focused on the local level, this book discusses climate basics such as carbon dioxide levels in the atmosphere, the Intergovernmental Panel on Climate Change, the Paris Agreement of 2015, worldwide energy generation forecasts, and other items of global concern in order to familiarize urban planners and citizen planners with key concepts that they will need to know in order to be able to host climate conversations at the local level. The many case studies from around the United States of America show how communities have encountered pushback and bridged the implementation gap, the gap between plan and reality, thanks to a commitment to substantive public engagement. The book is written for urban planners, local activists, journalists, elected or appointed representatives, and the average citizen worried about climate breakdown and interested in working to reshape the built environment.

Does the thought of planning a party feel overwhelming, intimidating, or like one more thing you have to do? Have you ever wondered how to create a fun and memorable party? The *Enlightened Party Planner: Guides to Creating Parties from the Heart* is a series of books based on the notion that being of service and coming from the heart will not only make for an amazing party your guests will remember for a lifetime, but will also leave you feeling happy and fulfilled. Book two in the *Enlightened Party Planner* series, *Decade Parties: A Blast from the Past*, is dedicated solely to decade parties from the 1920s through the 1980s. Each chapter offers historical references and myriad ideas to spark your imagination to creating wonderfully authentic decade experiences.

Artificial Intelligence for Robotics Routledge

World War II defined the 20th century and shaped many events, from the decolonization of Africa to the rise and fall of the Berlin

Wall. This encyclopedia offers a focused overview of this complex and volatile era, the circumstances that led up to war, the underlying causes, its unfolding and consequences. Organized for quick and precise access More than 1300 entries by 150 experts are arranged in six sections for easy reference and consultation. All the key ideas, events, actions, weapons, individuals, and organizations that played vital roles in the war are covered, from the Axis Pact to the Arab League, from the OSS to the Africa Korps, from the Chetniks to the Jedburghs, from the battle of Kursk to Operation Mincemeat, from Bill Donovan to Otto Skorzeny, from Gestapo to SMERSH, from Georgi Zhukov to Jean Leclerc, from the 88 gun to the Norden Bombsight. Covers important neglected subjects The Encyclopedia puts special emphasis on the often-neglected operations in Eastern Europe and Russia. A key section inspects and rates all the major weapons, with handy tables for easy comparison. And in recognition of the first large-scale participation of women in the war, the volume thoroughly documents their individual and unit contributions to the Allied effort. Finally, the encyclopedia discusses battlefield realities that explain, for example, why the airborne drops at Normandy succeeded and the ones at Arnheim failed. A bibliography, glossary, maps, photographs, and weapons and data tables enhance the coverage. Also includes 16 maps.

Mahit Dzmare arrives in the center of the multi-system Teixcalaanli Empire only to discover that her predecessor, the previous ambassador from their small but fiercely independent mining Station, has died. But no one will admit that his death wasn't an accident—or that Mahit might be next to die, during a time of political instability in the highest echelons of the imperial court. Now, Mahit must discover who is behind the murder, rescue herself, and save her Station from Teixcalaan's unceasing expansion—all while navigating an alien culture that is all too seductive, engaging in intrigues of her own, and hiding a deadly technological secret—one that might spell the end of her Station and her way of life—or rescue it from annihilation. A fascinating space opera debut novel, Arkady Martine's *A Memory Called Empire* is an interstellar mystery adventure. "The most thrilling ride ever. This book has everything I love."—Charlie Jane Anders, author of *All the Birds in the Sky* And coming soon, the brilliant sequel, *A Desolation Called Peace*! Hundreds of novels, films, and TV shows have speculated about what it would be like for us Earthlings to build cities on Mars. To make it a reality, however, these dreamers are in sore need of additional conceptual tools in their belt—particularly, a rich

knowledge of city planning and design. Enter award-winning author and Tufts University professor, Justin Hollander. In this book, he draws on his experience as an urban planner and researcher of human settlements to provide a thoughtful exploration of what a city on Mars might actually look like. Exploring the residential, commercial, industrial, and infrastructure elements of such an outpost, the book is able to paint a vivid picture of how a Martian community would function – the layout of its public spaces, the arrangement of its buildings, its transportation network, and many more crucial aspects of daily life on another planet. Dr. Hollander then brings all these lessons to life through his own rendered plan for “Aleph,” one of many possible designs for the first city on Mars. Featuring a plethora of detailed, cutting-edge illustrations and blueprints for Martian settlements, this book at once inspires and grounds the adventurous spirit. It is a novel addition to the current planning underway to colonize the Red Planet, providing a rich review of how we have historically overcome challenging environments and what the broader lessons of urban planning can offer to the extraordinary challenge of building a permanent settlement on Mars.

Economic development is intended to benefit everyone in a community; however, in many cases, increased public and private investment can result in the pricing out and displacement of existing residents and businesses. How do we achieve more equitable outcomes? The Equity Planner provides a toolkit of practical solutions for planners and all those involved in

placemaking to promote thoughtful, inclusive planning. Each chapter of *The Equity Planner* examines one particular aspect of inequity in the urban planning sphere, covering issues such as identity retention, affordability, and the protection and enhancement of local assets. While each chapter offers practicable solutions to these issues, the "Notes from the Field" sections describe how these same tools have been used (either successfully or unsuccessfully) in projects the author has been involved in, with a particular focus on the local resistance each project encountered. These real-world case studies are used to suggest methods to overcome such resistance, which the reader can then apply to their present initiatives. This book is written for urban planners, local activists, social scientists, policymakers, and anyone with an interest in equity planning. This book will be of use to both practicing and training urban planners and architects who seek to add equity planning to their professional repertoire.
