The PET Gold Exam Maximiser is a unique combination of coursebook and exam handbook. In full colour, it provides comprehensive exam training and language practice together with practical exam tips and strategies for PET.

Lettre D'information Springer

This innovative study presents concepts and problems in soil physics, and provides solutions using original computer programs. It provides a close examination of physical environments of soil, including an analysis of the movement of heat, water and gases. The authors employ the programming language Python, which is now widely used for numerical problem solving in the sciences. In contrast to the majority of the literature on soil physics, this text focuses on solving, not deriving, differential equations for transport. Using numerical procedures to solve differential equations allow the solution of quite difficult problems with fairly simple mathematical tools. Numerical methods convert differential into algebraic equations, which can be solved using conventional methods of linear algebra. Each chapter introduces a soil physics concept, and proceeds to develop computer programs to solve the equations and illustrate the points made in the discussion. Problems at the end of each chapter help the reader practise using the concepts introduced. The text is suitable for advanced undergraduates, graduates and researchers of soil physics. It employs an open source philosophy where computer code is presented, explained and discussed, and provides the reader with a full understanding of the solutions. Once mastered, the code can be adapted and expanded for the user's own models, fostering further developments. The Python tools provide a simple syntax, Object Oriented Programming techniques, powerful mathematical and numerical tools, and a userfriendly environment.

Geospatial Information Technology for Emergency Response European Studies

This volume presents almost 100 papers deriving from the 6th International Conference on Late Roman Coarse Wares, Cooking Wares and Amphorae in the Mediterranean. Themes comprise sea and land routes, workshops and production centres, and regional contexts (western Mediterranean, eastern Mediterranean, Sicily and the Mediterranean islands).

Headway Digital. Intermediate. Student's Book. Per Le Scuole Superiori John Wiley & Sons

Examines and explains the crucial, but often mystifying issues facing Europe and its constituent countries: subsidiarity, the pros and cons of a shared foreign policy, trade barriers and the free movement of people, monetary union and the nightmare question of the common agricultural policy.

LRCW 6: Late Roman Coarse Wares, Cooking Wares and Amphorae in the Mediterranean: Archaeology and Archaeometry Springer Nature

Landscape Archaeology and GIS examines the ways in which Geographical Information Systems can be used to explore archaeological landscapes, and summarizes the most appropriate methods to use. It is structured around principal themes in landscape archaeology, and integrates desk-based assessment, data collection, data modeling, and landscape analysis, right through to archiving and publication. This is the first book on GIS to focus specifically on landscape archaeology that is accessible to a wide archaeological readership. It explores the applications of GIS to a wide variety of archaeological evidence including maps, aerial photographs, and earthworks. The work is well-illustrated throughout with digital maps and models being used to support case studies, as well as for suggesting new hypotheses relevant to this discipline.

Umbria W.H. Freeman

Vol. 36- includes the "Calendario delle riunioni e dei congressi".

Rock Coast Geomorphology Elsevier

Celebrated title story plus "Little Hut," "Mrs. Frola and Mr. Ponza, Her Son-in-Law," "Citrons from Sicily," "With Other Eyes," "A Voice," and 5 other tales from the 1934 Nobel Prize-winning author.

Geothermal Energy and Society Van Nostrand Reinhold Company

This volume contains peer-reviewed papers from the Fourth World Landslide Forum organized by the International Consortium on Landslides (ICL), the Global Promotion Committee of the International Programme on Landslides (IPL), University of Ljubljana (UL) and Geological Survey of Slovenia in Ljubljana, Slovenia from May 29 to June 2.. The complete collection of papers from the Forum is published in five full-color volumes. This second volume contains the following: • Two keynote lectures • Landslide Field Recognition and Identification: Remote Sensing Techniques, Field Techniques • Landslide Investigation: Field Investigations, Laboratory Testing • Landslide Modeling: Landslide Mechanics, Simulation Models • Landslide Hazard Risk Assessment and Prediction: Landslide Inventories and Susceptibility, Hazard Mapping Methods, Damage Potential Prof. Matjaž Mikoš is the Forum Chair of the Fourth World Landslide Forum. He is the Vice President of International Consortium on Landslides and President of the Slovenian National Platform for Disaster Risk Reduction. Prof. Binod Tiwari is the Coordinator of the Volume 2 of the Fourth World Landslide Forum. He is a Board member of the International Consortium on Landslides and an Executive Editor of the International Journal "Landslides". He is the Chair-Elect of the Engineering Division of the US Council of Undergraduate Research, Award Committee Chair of the American Society of Civil Engineering, Geo-Institute's Committee on Embankments, Slopes, and Dams Committee. Prof. Yueping Yin is the President of the International Consortium on Landslides and the Chairman of the Committee of Geo-Hazards Prevention of China, and the Chief Geologist of Geo-Hazard Emergency Technology, Ministry of Land and Resources, P.R. China. Prof. Kyoji Sassa is the Founding President of the International Consortium on Landslides (ICL). He is Executive Director of ICL and the Editor-in-Chief of International Journal "Landslides" since its foundation in 2004. IPL (International Programme on Landslides) is a programme of the ICL. The programme is managed by the IPL Global Promotion Committee including ICL and ICL supporting organizations, UNESCO, WMO, FAO, UNISDR, UNU, ICSU, WFEO, IUGS and IUGG. The IPL contributes to the United Nations International Strategy for Disaster Reduction and the ISDR-ICL Sendai Partnerships 2015-2025.

The Bioarchaeology of Ritual and Religion Oxford University Press

These sixteen essays, written with the clarity and candor for which Weisskopf is well known, give us a glimpse into his life work—both as a theoretical physicist and as a spokesman for all of humanity.

Cultural Severance and the Environment Routledge

The densely populated Campi Flegrei resurgent caldera is one of the widest known, best studied and highly dangerous volcanoes of the world. This monograph synthesises the current knowledge of this volcano, through different review chapters. Each chapter of this book is dedicated to a specific volcanological aspect, authored by well-recognised experts. The volume attempts to cross the barriers between the volcanological, geological, geochemical and geophysical perspectives, and offers a comprehensive and up-to-date reference to earth-science scholars, as well as land planners and civil defence officers.

Advances in Tourism, Technology and Systems KIT Scientific Publishing

Die Autorin untersucht sprachliche Herausforderungen, denen Lernende am Ende der Sekundarstufe I im Fachunterricht begegnen. Ihre empirischen Daten stammen aus Schulen in Italien. Zwischen dem Sprachgebrauch der Lernenden und den in den Schulbüchern und von Lehrkräften verwendeten Registern stellt sie Diskrepanzen fest. Im Zentrum der Analysen steht der Wortschatz, und es werden weitere sprachliche Aspekte und die Rolle der Fachlehrkräfte für sprachliche Bildung erforscht.

Proceedings of the Second Workshop of the HORIZON 2020 CEBAMA Project (KIT Scientific Reports ; 7752) Springer

The 1982 revised second edition of W. E. Dasent's *Inorganic Energetics*, an established and important teaching text.

Qui touring Verlag Barbara Budrich

The papers included in this volume were presented at the VIth International Ephemeroptera Conference and the Xth International Symposium on Plecoptera, and at a Joint Symposium on Applied Aspects in the study of Mayflies and Stoneflies. One additional paper has been included, a review of the studies of on mayflies.

Democracy in Europe MDPI

The Routledge Companion to Smart Cities explores the question of what it means for a city to be 'smart', raises some of the tensions emerging in smart city developments and considers the implications for future ways of inhabiting and understanding the urban condition. The volume draws together a critical and cross-disciplinary overview of the emerging topic of smart cities and explores it from a range of theoretical and empirical viewpoints. This timely book brings together key thinkers and projects from a wide range of fields and perspectives into one volume to provide a valuable resource that would enable the reader to take their own critical position within the topic. To situate the topic of the smart city for the reader and establish key concepts, the volume sets out the various interpretations and aspects of what constitutes and defines smart cities. It investigates and considers the range of factors that shape the characteristics of smart cities and draws together different disciplinary perspectives. The consideration of what shapes the smart city is explored through discussing three broad 'parts' – issues of governance, the nature of urban development and how visions are realised – and includes chapters that draw on empirical studies to frame the discussion with an understanding not just of the nature of the smart city but also how it is studied, understood and reflected upon. The Companion will appeal to academics and advanced undergraduates and postgraduates from across many disciplines including Urban Studies, Geography, Urban Planning, Sociology and Architecture, by providing state of the art reviews of key themes by leading scholars in the field, arranged under clearly themed sections.

Soil Physics with Python Archaeopress Publishing Ltd

Euro-scepticism has become a political challenge of imposing size. The belief that the EU would continue, inexorably, to increase its responsibilities, its membership, and its credibility with the electorates of Europe seems like a pipedream. Almost every major European country now has a political party (whether of the left or right) that is openly opposed to the EU's institutions and core policies. However, a political phenomenon on this scale did not spring up, mushroom-like, overnight. Sentiments, attitudes and political standpoints against the European Union have deep roots in the national histories of the various member states. This book assembles a group of scholars from across Europe to investigate the long-term origins and causes of Euro-scepticism in an apposite range of EU countries. Contributors are: Gabriele D'Ottavio, Kira Gartzou-Katsouyanni, Mark Gilbert, Adéla Gjuríčová, Simona Guerra, Thorsten Borring Olesen, Daniele Pasquinucci, Emmanuelle Reungoat, Paul Taggart, Antonio Varsori, and Hans Vollaard.

Landscape Archaeology and GIS Springer Science & Business Media

"Una natura idilliaca, città e borghi dove il ritmo della vita pare pacifico e rallentato, la ricchezza e l'onnipresenza dalla storia. Oltre ai festival, all'ottimo cibo e al buon vino. Non si finisce mai di scoprire l'Umbria" (Ruggero Ragonese, autore Lonely Planet). Esperienze straordinarie: foto suggestive, i consigli degli autori e la vera essenza dei luoghi. Personalizza il tuo viaggio: gli strumenti e gli itinerari per pianificare il viaggio che preferisci. Scelte d'autore: i luoghi più famosi e quelli meno noti per rendere unico il tuo viaggio. Attività all'aperto; viaggiare con i bambini; arte e storia; enogastronomia.

Geoheritage and Geotourism Resources CRC Press

The Bioarchaeology of Ritual and Religion is the first volume dedicated to exploring ritual and religious practice in past societies from a variety of 'environmental' remains. Building on recent debates surrounding, for instance, performance, materiality and the false dichotomy between ritualistic and secular behavior, this book investigates notions of ritual and religion through the lens of perishable material culture. Research centering on bioarchaeological evidence and drawing on

methods from archaeological science has traditionally focused on functional questions surrounding environment and economy. However, recent years have seen an increased recognition of the under-exploited potential for scientific data to provide detailed information relating to ritual and religious practice. This volume explores the diverse roles of plant, animal, and other organic remains in ritual and religion, as foods, offerings, sensory or healing mediums, grave goods, and worked artifacts. It also provides insights into how archaeological science can shed light on the reconstruction of ritual processes and the framing of rituals. The 14 papers showcase current and new approaches in the investigation of bioarchaeological evidence for elucidating complex social issues and worldviews. The case studies are intentionally broad, encompassing a range of sub-disciplines of bioarchaeology including archaeobotany, anthracology, palynology, micromorphology, geoarchaeology, zooarchaeology (including avian and worked bone studies), archaeomalacology, and organic residue analysis. The temporal and geographical coverage is equally wide, extending across Europe from the Mediterranean and Aegean to the Baltic and North Atlantic regions, and from the Mesolithic to the medieval period. The volume also includes a discursive paper by Prof. Brian Hayden, who suggests a different interpretative framework of archaeological contexts and rituals.

The Oxford Handbook of Wetland Archaeology Geological Society of London

This history traces the development of democracy in Europe from its origins in ancient Greece up to the present day. Considers all the major watersheds in the development of democracy in modern Europe. Describes the rediscovery of Ancient Greek political ideals by intellectuals at the end of the eighteenth century. Examines the twenty-year crisis from 1789 to 1815, when the repercussions of revolution in France were felt across the European continent. Explains how events in France led to the explosion of democratic movements between 1830 and 1848. Compares the different manifestations of democracy within Eastern and Western Europe during the latter half of the nineteenth century. Considers fascism and its consequences for democracy in Europe during the twentieth century. Demonstrates how in the recent past democracy itself has become the object of ideological battles.

Pet Gold Exam Maximiser Courier Corporation

This Special Issue outlines the role of geoheritage and geotourism as potential touristic resources of a region. The term "geoheritage" refers to a particular type of natural resources represented by sites of special geological significance, rarity or beauty that are representative of a region and of its geological history, events, and processes. These sites are also known as "geosites" and, as well as archaeological, architectonic, and historical sites, can be considered as part of the cultural estate of a country. "Geotourism" is an emerging type of sustainable tourism, which concentrates on geosites, focusing on visitor knowledge, environmental education, and amusement. Geotourism may be very useful for geological sciences divulgation and may provide additional opportunities for the development of rural areas, generally not included among the main touristic attractions. The collected papers focused on these main topics with different methods and approaches and can be grouped as follows: i) papers dealing with geosite promotion and valorization in protected areas; ii) papers dealing with geosite promotion and valorization in non-protected areas; iii) papers dealing with geosite promotion by exhibition, remote sensing analysis, and apps; iv) papers investigating geotourism and geoheritage from tourists' perspectives.

The Origin and History of the English Language and of the Early Literature it Embodies Longman Italia

Melt inclusions provide a unique record of the physical and chemical processes operating in active magma chambers associated with volcanic systems. This book includes a summary of modern techniques used to study and interpret melt inclusions in volcanic rocks, as well as descriptive studies of specific volcanoes. These various studies document the enormous potential for melt inclusions to provide a window into the dynamics of active magma chambers. 'Melt Inclusions in Volcanic Systems' gives the most up-to-date summary of research on the application of melt inclusions in studies of active and fossil volcanic systems, as well as suggestions for future research in this area.
