A beautifully illustrated, informative
book for children introducing them to a

fascinating cast of beasts In The Big
Book of Beasts Yuval Zommer's
wonderful illustrations bring to whimsical
life some of the grizzliest, hairiest,
bravest, wiliest, and most fearsome
beasts in the animal kingdom. Brimming
with interesting facts from beast
consultant Barbara Taylor, this charming
picture book is a beautiful way for
parents to introduce young children to
the animal world—and for older children
to learn by themselves. In the first pages
children learn that beasts are wild
animals that can't be tamed and that
they all defend themselves in different
ways. As the book continues young

readers meet specific beasts, including armadillos, bears, tigers, and the Tasmanian devil. The Big Book of Beasts also approaches the world of beasts thematically, looking at mythical beasts, Ice Age beasts, beasts on your street, and how to save beasts in danger of extinction. The funny and conversational text, amazing facts, and glorious and quirky pictures will draw in young children over and over again.

Concepts embody our knowledge of the kinds of things there are in the world. Tying our past experiences to our present interactions with the environment, they enable us to recognize and understand new objects and events. Concepts are also relevant

to understanding domains such as social situations, personality types, and even artistic styles. Yet like other phenomenologically simple cognitive processes such as walking or understanding speech, concept formation and use are maddeningly complex. Research since the 1970s and the decline of the "classical view" of concepts have greatly illuminated the psychology of concepts. But persistent theoretical disputes have sometimes obscured this progress. The Big Book of Concepts goes beyond those disputes to reveal the advances that have been made, focusing on the major empirical discoveries. By reviewing and evaluating research on diverse topics such as category learning, word meaning, conceptual development in infants and

children, and the basic level of categorization, the book develops a much broader range of criteria than is usual for evaluating theories of concepts.

What is a family? Once, it was said to be a father, mother, boy, girl, cat and dog living in a house with a garden. But as times have changed, families have changed too, and now there are almost as many kinds of families as colours of the rainbow - from a mum and dad or single parent to two mums or two dads, from a mixed-race family to children with different mums and dads, to families with a disabled member. Mary Hoffman takes a look through children's eyes at

the wide varieties of family life: from homes, food, ways of celebrating, schools and holidays to getting around, jobs and housework, from extended families, languages and hobbies to pets and family trees - and she concludes that, for most people, their own family is the best one of all! With Ros Asquith's delightful pictures, this book takes a fresh, optimistic look at families of today.

Marion Wink is esteemed for bringing humor and wit to that most unavoidable of subjects: death. At last, Winik's critically acclaimed, cult favorites, *Glen Rock Book of the Dead* and *Baltimore Book of the Dead*, have been carefully combined in their proper chronological

order, revealing more clearly than ever before the character hidden throughout these stories: Winik herself. Featuring twelve additional vignettes along with a brand-new introduction, *The Big Book of the Dead* continues Winik's work as an empathetic, witty chronicler of life.

The new installment in the popular *Big Book* series connects young readers from around the world by emphasizing that we all belong to the same planet Earth. *The Big Book of Belonging* is a timely celebration of all the ways that humans are connected to life on planet Earth. With children at the heart of every beautifully illustrated spread, this book draws parallels between the way humans, plants, and animals live and

behave. We all breathe the same air and take warmth from the same sun, we grow, we adapt to the seasons, and we live together in family groups. Readers will be fascinated to learn that instead of using words to communicate, fava beans send chemical messages through their roots, Caribbean reef squid send warnings of danger and even declarations of love by changing color, and that adorable big-eyed primates called tarsiers make calls to one another over the noise of the rainforest that are too high-pitched for predators to hear. By putting children at the heart of the book's concept, author Yuval Zommer unites readers of the Big Book series from all corners of the world under one banner—of belonging to planet Earth. The book's gentle message of caring for

nature will inspire readers of all ages and encourage a new generation of environmentalists to flourish.

So, how can you find a new approach for using this effective—yet intimidating—treatment? *The Big Book of Exposures* offers unconventional new

exposures to help you provide the most effective treatment possible. In addition, you'll also find a comprehensive overview of exposure therapy; a rationale for its use in treating anxiety-related disorders; troubleshooting tips for dealing with common roadblocks, such as avoidance; and techniques for helping clients stay motivated during treatment.
