The Med School Survival Guide John Wiley & Sons

Robert H. Coombs's *Surviving Medical School* offers both an orientation to the hectic, anxious realm of medical education and a resource for coping with and succeeding in that environment. Coombs begins with questions regarding expectations and intellectual and emotional capacities. The author then examines matters related to career doubt and alienation often experienced by medical students. Following an orientation to the clinical experience, the book concludes with discussions about physician fallibility, residency, and professional practice. *Surviving Medical School* is for medical students at all levels and provides excellent preparation for baccalaureate students anticipating medical school. It also serves as a shelf reference for medical school instructors, advisors, and counselors.

 No one knows what the next disaster will be: earthquake, Coronavirus, flu epidemic, flood, terrorist attack. But everyone should know how to survive a medical emergency if a medical professional isn't available. From Dr. Joe Alton and Amy Alton ARNP comes an updated edition of their bestseller *The Survival Medicine Handbook*. This unique medical book is meant to enable the average person to handle injuries and illness in situations in which modern medical facilities and professionals aren't available due to a disaster. This book is written by America's top medical preparedness experts: Joe Alton, MD, and Amy Alton, ARNP. Their mission: to put a medically prepared person in every family for when medical help is not on the way. Using decades of medical experience, they address, in plain language, dozens of medical issues associated with surviving disasters and epidemics. The Altons also discuss the medical supplies needed to become a medical asset to your

family and community as well as alternative and natural strategies for when pharmaceuticals aren't available. Topics include: Appendicitis and Conditions that Mimic Urinary Tract Infections Mosquito-Borne Illnesses Allergic Reactions and Anaphylaxis Head Injuries Animal Bites Snake Bites Head injuries Kidney Stones Dislocations and Fractures Nosebleeds Pain Medications Natural Pain Relief And much much more! Most medical books will send you to the doctor or hospital when an emergency happens. The Altons assume that the worst might actually happen—that the average person could be left without medical help in a disaster. With their book, you can keep your family healthy in times of trouble.

Calling 911 in an emergency may be the most important thing you ever do. However, it is only one tool to get you and yours through a medical emergency. This guide lays out a smarter process to improve the odds that you and your charge(s) have successful outcomes (i.e., survive) when going through a medical emergency. That means getting yourself, your family, your charges, your home, and your environment ready for a medical emergency. You need to make your home and environment "responder ready." You need to learn how to give critical aid that keeps your charge stable until professional help arrives. You need to know how to get responders to your charge quickly and be as helpful to them as you can while they are there. It's also important to know how to get prompt care at - and "work" - a hospital emergency department. Finally, you need to plan for and get through the recovery process with your charge and take care of yourself, too. That includes learning from the experience so you can improve what you know and better handle things the next time. It also includes assessing the emergency's impact on you, the caregiver, so that you can successfully recover yourself.

Tips, techniques, humour and cartoons to guide you through life as a medical student. Being a medical student is challenging, intimidating and rewarding in equal measure. Medical students often get hung up on the stresses and strains of learning such a vast amount of information and the expectations upon them. *Surviving Medicine: the med school year* is the perfect antidote to this stressful environment - the cartoons are light-hearted reflections on life as a medical student and highlight some of the absurdities you are likely to encounter. But this book is much more than just a collection of funny, and often irreverent, cartoons. It provides real practical advice on surviving ward rounds, coping with doubt and anxiety and preparing for exams, amongst others. It also contains a wealth of medical tips and knowledge to help you survive your time at medical school. Most of the situations described in this book will crop up at some point as you progress through medical school and beyond. Consider them a rite of passage as you rack up the experience and confidence to look back and think, I can't believe I was scared of that...!

The Survival Doctor's Complete Handbook Simon and Schuster

This book, written by a lawyer and a doctor explains to everyday readers ways in which they can avoid death and injury caused by medical mistakes. It may be shocking to learn that preventable errors by doctor and hospital personnel are a leading cause of death and injury in the United States—perhaps even exceeding the annual deaths caused by heart disease and cancer. But

avoiding these mistakes is possible, and the rules found in this book will arm readers against the careless errors that lead to such deaths and injuries. From hospitals to doctors' offices, medical professionals are overwhelmed, overtired, even overworked and mistakes are sometimes unavoidable even with the best safety measures in place. A resident at the end of a 36-hour on-call stint may forget to wash her hands before performing a surgical procedure. A chart may be mismarked. Medications may be inaccurately listed. Test results may be inaccurately interpreted. But patients are in a position to help themselves and their medical caregivers to avoid these mistakes by taking more active and attentive part in their own healthcare. By being aware of the

most common errors, patients can look for ways to ask questions, review information, even examine test results with a critical eye toward their own health and specific situations. Robert Fox and Chris Landon show them how.
