The Iranian

languages

form the

major eastern

branch of the

Indo-European

group of

languages,

itself part of

the larger

Indo-Iranian

family.

Estimated to

have between

150 and 200

million native speakers, the Iranian languages constitute one of the world's major language families. This comprehensive volume offers a detailed overview of the principle languages which make up this group: Old Iranian, Middle Iranian, and New Iranian. The Iranian Languages is divided into fifteen chapters. The introductory chapters by the editor present a general overview and a detailed discussion of the linguistic typology of Iranian. The individual chapters which follow are written by leading experts in the field. These provide the reader with concise, non-technical descriptions of a range of Iranian languages. Each chapter follows the same pattern and sequence of topics, taking the reader through the significant features not only of phonology and morphology but also of syntax; from phrase level to complex sentences and pragmatics. Ample examples on all levels are provided with detailed annotation for the non-specialist reader. In addition, each chapter covers lexis, sociolinguistic and typological issues, and concludes with annotated sample texts. This unique resource is the ideal companion for

undergraduate and postgraduate students of linguistics and language. It will also be of interest to researchers or anyone with an interest in historical linguistics, linguistics anthropology and language development. Gernot Windfuhr is Professor of Iranian Studies at the University of Michigan; he has published widely on Persian and Iranian languages and linguistics and related languages, as

well as on other aspects of Iranian culture including Persian literature and Pre-Islamic Iranian religions.

 Many teachers are frustrated with how spelling is traditionally taught and finding the time to support young spellers with explicit strategy instruction. Author Mark Weakland developed

Super Spellers: Seven Steps to Transforming Your Spelling Instruction, an approach to teaching spelling in a way that is research-based and tied to authentic reading and writing. Super Spellers helps teachers understand what their students need through frequent formative assessments. The book focuses on the scope of spelling instruction and teaching

spelling strategies to increase students' word-solving skills. Once kids are comfortable and competent spellers they become super readers and writers, too. In addition to step-by-step guidance, each chapter features an If you only have 10 minutes lesson plan segment. The appendix contains word inventories, a sample scope and sequence, examples of spelling list transformation, and word

ladder activities. *Multilingual Individuals and Multilingual Societies* Cambridge University Press This text is designed for undergraduate and graduate students interested in contemporary English, especially those whose primary area of interest is English as a second language. Focus is placed exclusively on English data, providing an empirical

explication of the structure of the language. By providing a synchronic and diachronic account of the syllable and the phonological word in Central Catalan (Catalan dialect group) and Swabian (Alemannic dialect group), the author shows how the evolution of Old Catalan</p> | <p>and Old Alemannic can be explained in terms of a typological drift toward an increased relevance of the phonological word. Further, the description of Central Catalan and Swabian allows to identify common strategies for profiling the phonological word and thus makes an important contribution to research on prosodic phonology.</p> <p><i>Patterns of Ellipsis in Russian</i></p> | <p><i>Compound Noun Formations</i></p> <p>John Wiley & Sons</p> <p>This collection of papers brings together contributions from experts in functional linguistics and in Construction Grammar approaches, with the aim of exploring the concept of construction from different angles and trying to arrive at a better understanding of what a construction is, and what roles constructions</p> |

play in the frameworks which can be located within a multidimensional functional-cognitive space. At the same time, the volume has a historical dimension, for instance in plotting the developments which led to recent models. The book is organised in three sections: the first deals with particular theoretical issues, the second is devoted to the recent Lexical Constructional Model, and

the third presents a number of analyses of specific constructions. The volume thus makes an important contribution to the ongoing debate about the relationship between functionalist and constructionist models. *The Construction of Words* Routledge This volume presents fifteen essays in honor of Joseph Yalahom on a variety of subjects, mainly in the

field of Hebrew (liturgical) poetry, poetics, and literature from the early Byzantine period to the Middle Ages. *Development of Nominal Inflection in First Language Acquisition* Cambridge University Press This volume contains a detailed grammatical description of the spoken Aramaic dialect of the Jewish communities in the towns of Sulemaniyya and Ḥalabja in North Eastern

Iraq. It also includes a transcription of oral texts recorded in the dialect. The grammar is based on extensive fieldwork carried out among native speakers. It consists of sections on phonology, morphology and syntax. There is also a study of semantic fields in the lexicon of the dialect and full glossaries of lexical items. This Aramaic dialect, which belongs to the North Eastern Neo-Aramaic group, has

never been described before. The Jewish communities left Sulemaniyya and Ḥalabja in the 1950s and the dialect is now on the verge of extinction.

Walter de Gruyter Manuscript (995 p.) of book published: Philadelphia : American Philosophical Society, 1984 (Memoirs of the American Philosophical

Society ; v. 155). Polish Reference Grammar Walter de Gruyter GmbH & Co KG One of the core challenges in linguistics is elucidating compounds—their formation as well as the reasons their structure varies between languages. This book on Modern Greek rises to the challenge with a meticulous treatment of its diverse, intricate compounds, a study as grounded in

theory as it is rich in data. Enhancing our knowledge of compounding and word-formation in general, its exceptional scope is a worthy model for linguists, particularly morphologists, and offers insights for students of syntax, phonology, dialectology and typology, among others. The author examines first-tier themes such as the order and relations of constituents, headedness, exocentricity,

and theta-role saturation. She shows how Modern Greek compounding relates to derivation and inflection, and charts the boundaries between compounds and phrases. Exploring dialectically variant compounds, and identifying historical changes, the analysis extends to similarly formed compounds in wholly unrelated languages. Journal of the American

processing define a multi-factorial domain of scientific inquiry whose thorough investigation goes well beyond the boundaries of traditional disciplinary taxonomies, to require synergic integration of a wide range of methods, techniques and empirical and experimental findings. The present book intends to approach a few central issues concerning the organization,

structure and functioning of the Mental Lexicon, by asking domain experts to look at common, central topics from complementary standpoints, and discuss the advantages of developing converging perspectives. The book will explore the connections between computational and algorithmic models of the mental lexicon, word frequency distributions and information

theoretical measures of word families, statistical correlations across psycholinguistic and cognitive evidence, principles of machine learning and integrative brain models of word storage and processing. Main goal of the book will be to map out the landscape of future research in this area, to foster the development of interdisciplinary curricula and help single-domain

specialists understand and address issues and questions as they are raised in other disciplines.

Word Study and Phonics, Grade 5

John Benjamins Publishing This volume focuses on detailed studies of various aspects of Construction Morphology, and combines theoretical analysis and descriptive detail. It deals with data from several domains of linguistics and contributes to an integration

of findings from various subdisciplines of linguistics into a common model of the architecture of language. It presents applications and extensions of the model of Construction Morphology to a wide range of languages. Construction Morphology is one of the theoretical paradigms in present-day morphology. It makes use of concepts of Construction Grammar for the analysis of word formation and

inflection. Complex words are seen as constructions, that is, pairs of form and meaning. Morphological patterns are accounted for by construction schemas. These are the recipes for coining new words and word forms, and they motivate the properties of existing complex words. Both schemas and individual words are stored, and hence there is no strict separation of

lexicon and grammar. In addition to abstract schemas there are subschemas for subclasses of complex words with specific properties. This architecture of the grammar is in harmony with findings from other empirical domains of linguistics such as language acquisition, word processing, and language change. *Lexicographic tools. The crosslinguistic studies of the early developmental stages of number, case, and gender in twelve typologically different languages with eight genetic affiliations follow a functional-constructivist approach. Some issues addressed are mean size of paradigms, percentage of base forms, and productivity. One of the main findings

is that the typological characteristics of the language acquired influence the process of inflectional development. Proto-Slavic Inflectional Morphology Walter de Gruyter

differences in the structure of words and sentences. The first full-length treatment of the topic, it will be of interest to scholars working within the fields of English historical linguistics, language variation and change, and dialectology. Toda Grammar and Texts Cambridge Scholars Publishing The 25 contributions of this volume represent a selection from the more than 120 papers originally presented at the International Conference on Multilingual Individuals and Multilingual Societies (MIMS), held in Hamburg (October 2010) and organized by the Collaborative Research Center Multilingualism after twelve years of successful research. It presents a panorama of contemporary research in multilingualism covering three fields of investigation: (1) the simultaneous and successive acquisition of more than one language, including language attrition in multilingual settings, (2) historical aspects of multilingualism and variance, and (3) multilingual communication. The papers cover a vast variety of linguistic phenomena including morphology, syntax, segmental and prosodic phonology as

well as discourse production and language use, taking both individual and societal aspects of multilingualism into account. The languages addressed include numerous Romance, Slavic and Germanic varieties as well as Welsh, Hungarian, Turkish, and several South African autochthonous languages. *Sadlier Phonics* Springer

description of the spoken Aramaic dialect of the Christian community in the town of Qaraqosh, which lies on the Mosul plain in Northern Iraq, this volume also includes a transcription of oral texts recorded in the dialect. The grammar is based on extensive fieldwork carried out among native speakers. It consists of sections on phonology, morphology and syntax. There is also a study of

semantic fields in the lexicon of the dialect and full glossaries of lexical items. This Aramaic dialect has never been described before. This resource begins with an introduction to

singular and plural words and includes easy-to-understand instructions on how to form different plurals, examples, colorful illustrations, and reproducible worksheets for individual practice. Students will be taught how to determine if -s or -es should be added to the ending to form the plural, if the spelling stays the same in the singular and plural, or if the plural is formed by

making another kind of change to the singular. They will also learn that a final f or fe of a noun often changes to v before adding -es to make it mean more than one and that a final y of a word often changes to i before adding -es to form the plural. Reproducible worksheets that teach about inflectional endings, irregular verbs, compound words, and prefixes and suffixes are

also available. Students will discover that the inflectional endings -s or -es, -ing, and -ed can be added to verbs to change their tense and that -er and -est can be used for comparison purposes of adjectives and adverbs. Moreover, they will learn that the final consonant of some words must be doubled and the final e of some words dropped before adding an ending that begins with a

vowel and that the final y of some words is changed to i before adding an ending that doesn't begin with an i. Students will be taught to recognize the different forms of verbs and the forms of comparison for adjectives and adverbs. They will also be taught how to recognize various irregular verbs

and irregular comparatives and superlatives. In addition, students will discover how a root word changes in meaning when another word, a prefix, or suffix is added to it and will learn that there are three different kinds of compound words. A reproducible practice test is included

towards the end of the book. The same practice test and a formal unit test are also available online as computer-based tests. You can access the tests free of charge by visiting the Habakkuk Educational Materials website at <https://www.habakkuk.net/>.
