THE UPDATED DEFINITIVE REFERENCE ON MEDICAL AND DENTAL OFFICE DESIGN Medical and Dental Space Planning is an indispensable guide to the myriad of details that make a medical or dental practice efficient and productive. The unique needs of more than thirty specialties, as well as primary care, are explained in the context of new technology and the many regulatory and compliance issues influencing design. Concepts are also presented for ambulatory surgical centers, diagnostic imaging, clinical laboratories, breast care clinics, endoscopy centers, community health centers, radiation oncology, and single-specialty and multispecialty group practices and clinics. A thorough review of the latest dental technology and many creative space plans and design ideas for each dental specialty will be of interest to both dentists and design professionals. Important topics like infection control are top of mind, influencing every aspect of dental office design. An "inside look" at what goes on in each specialist's office will familiarize readers with medical and dental procedures, how they are executed, and the types of equipment used. Technology has radically impacted medical and dental practice: digital radiography, electronic health records, mobile health devices, point-of-care diagnostic testing, digital diagnostic instrumentation, CAD/CAM systems for digital dental impressions and milling of restorations in the dentist's office, portable handheld X-ray, and 3D cone beam computed tomography for dentists all have major implications for facility design. The influence of the Affordable Care Act is transforming primary care from volume-based to value-based, which has an impact on the design of facilities, resulting in team collaboration spaces, larger consultative examination/assessment rooms, and accommodation for multidisciplinary practitioners who proactively manage patient care, often in a patient-centered medical home context. The wealth of information in this book is organized to make it easy to use and practical. Program tables accompany each medical and dental specialty to help the designer compute the number and sizes of required rooms and total square footage for each practice. This handy reference can be used during interviews for a "reality check" on a client's program or during space planning. Other features, for example, help untangle the web of compliance and code issues governing office-based surgery. Illustrated with more than 600 photographs and drawings, Medical and Dental Space Planning is an essential tool for interior designers and architects as well as dentists, physicians, and practice management consultants.

Dental school offers the skills you need to serve patients while they're in your dental chair, but rarely does it consider the day-to-day issues of creating, maintaining, and improving a dental practice. The newly graduated dentist is often alone as he or she stumbles through the unfamiliar realms of sales, customer service, and hiring staff. A thirty-year veteran of dentistry, Kevin Coughlin, DMD, MBA, MAGD, runs fourteen dental practices, performing all aspects of general dentistry. Under his expert tutelage, you'll learn how to apply his tested and refined processes and procedures to your own dental office. Let Coughlin guide you through the otherwise torturous process of hiring your team and providing them with the right training and education. He also offers teaching points in the clinical aspects of dental surgery and the comprehensive treatment planning of cases that are difficult to include in your practice. From day-to-day office management to cosmetic dentistry and other specializations you can add to your growing practice, Coughlin offers it all—a complete guide for business, the dental chair, and personal life. You could grow your practice through trial and error. Or you could follow Coughlin's proven blueprint for success.

THE KEYS TO BUILD A DREAM PRACTICE There are two keys to unlock a dream practice for both dentists and their teams. The first key is to remove yourself as participating members in those dental insurance plans you dislike the most. Do this slowly, over an extended period of time. Explain to your patients that as a participating member in their dental plan, you are handcuffed regarding the procedures you can offer them. The second key is to implement a structured periodontal therapy program and generate \$300,000 to \$400,000 per hygienist per year in the dental practice. Allow patients to make educated decisions about their care. Dr. Robert Tripke has been successfully doing it since 1987 and this book will help you crack the code too.
