Approach analogies as  
puzzles. To solve them,  
students need to use  
cognitive processes and  
critical-thinking skills.  
These exercises present  
word and/or picture

relationships in several  
different ways. The goal is  
to develop skills in visual  
imagery, reading  
comprehension,  
vocabulary development,  
reasoning and test-taking.

Analogy puzzles challenge  
children's creativity,  
encouraging the  
development of the  
logical and analytical  
skills so important to

schoolwork at all levels,  
from preschool to college.  
Jan Zebrack's imaginative  
nature-based puzzles  
capture children's  
imagination while  
introducing them to the  
delight of solving analogy  
puzzles. Solving analogy  
puzzles also fosters a  
child's predictive skills,  
which are essential for  
successful reading.  
Zebrack's analogy puzzles  
all focus on nature and  
animals, with themes

ranging from comparative anatomy to life cycles, aging, diet, and habitats. Beautiful photographs capture children's attention and help them remember the analogies. Donated by award-winning photographer Diane McAllister and others, the photos have an international flair, taking children across North America, Laos, Thailand, Brazil, Africa, China, and Australia. The book offers the child an opportunity to prove his or her understanding of the concept of analogies

by entering a contest on "Your Page to Create" at the end of the book. Selected submissions will be displayed on the website: [www.AuthorJanZebrack.com](http://www.AuthorJanZebrack.com) and included in Zebrack's next book, "Analogies Written and Illustrated by Kids". All profits from the sale of this book go to the Children's Miracle Network. *Analogies for Critical Thinking Grade 5* John Wiley & Sons  
An analogy is a comparison that points

out the similarities between things that are different in all other respects. Teaching students how to solve analogies not only develops their logical thinking, but also builds visual awareness and verbal proficiency. The seven different types of visual analogies and 14 different verbal analogies in *Analogies for Beginners* are perfect for beginning lessons in logical reasoning, flexible thinking, and vocabulary. Each page gives students an example of the type of

analogy that is being introduced and then provides 7 (visual) or 10 (verbal) problems for them to solve. This combination of verbal and visual formats is an ideal way to introduce logical thinking in primary grades. Whether you have time for one analogy a day, or a worksheet a week, students will benefit in many ways when analogies are part of your curriculum. The use of visual analogies is beneficial for developing visual analysis even for older students, but

especially useful for nonreaders and students with developing English skills. The verbal analogies provide students with exercises that require them to use word comprehension and also to examine various characteristics, uses, and relationships.

(correct) versus "mouth is related to eat as stomach is related to liver" (incorrect).

The public schools have taken on increasing responsibility over the last decade for providing in-school educational services to children with low-incidence handicaps, children who, not very many years ago, would have been relegated to custodial care or limited to care only in the home. With the increasing responsibility for

educating these children has come recognition that few of us have the requisite knowledge or skills to deliver high-quality services to these children. University programs are providing more staff, but the existing staff must also be trained. We have been involved for several years, with the special education branch of the Nebraska Department of Education in the provision of in-service training in the early identification and assessment of handicapping conditions,

when we realized an even greater need for training regular classroom teachers, administrators, and psychologists in addition to early childhood special education personnel about the nature of low-incidence handicaps and how they might be dealt with in the public school setting. Knowing the enormity and the expense of such an undertaking, we tentatively approached the State Department. They too were cognizant of this need and welcomed our ideas. Jan Thelen and her

capable staff then took to coordinating the planning with us and the Nebraska Department of Education provided the fundings. *Compare and Contrast Scientific e-Resources* This new collection of distinctive studies tracks developments in the most recent published work during the period 1990-95, with an integral guide and editorial commentary by Leslie Smith. Psychology Press  
#1 NEW YORK TIMES BESTSELLER • The late, beloved Rachel Held Evans answers many children's first question about God in this gorgeous picture book, fully realized by her friend Matthew Paul Turner, the bestselling author of

When God Made You. Children who are introduced to God, through attending church or having loved ones who speak about God, often have a lot of questions, including this ever-popular one: What is God like? The late Rachel Held Evans loved the Bible and loved showing God's love through the words and pictures found in that ancient text. Through these pictures from the Bible, children see that God is like a shepherd, God is like a star, God is like a gardener, God is

like the wind, and more. God is a comforter and support. And whenever a child is unsure, *What Is God Like?* encourages young hearts to “think about what makes you feel safe, what makes you feel loved, and what makes you feel brave. That’s what God is like.”

The past decade has witnessed a considerable upsurge of clinical and research interest in the problems of developmentally and

physically the fields of psychology, disabled persons. Indeed, professionals from special education, rehabilitation, psychiatry, and social work have all directed attention to the development and implementation of evaluation and remedial programs. The heightened activity in this area is in part a result of early assessment research with these populations, which provided preliminary evidence of difficulties in social and emotional adjustment in many

disabled individuals. In response to these findings, many intervention efforts have been implemented to deal with these issues and improve the life situation of the disabled. Also, there were indications that developmentally and physically disabled children often were deprived of adequate educations. As a result, legal and legislative initiatives have been enacted in recent years to make public education available to all students irrespective of disability.

Central to all therapeutic and psychoeducational endeavors with the disabled is psychological evaluation. Only through careful and comprehensive psychological evaluation can areas of deficit as well as strengths be identified. Once treatment targets and goals have been ascertained, psychological evaluation is needed to determine the efficacy of intervention strategies. However, the field of psychological evaluation,

in general, and with disabled persons, in particular, has become highly specialized. This is largely a function of the changing roles of psychological evaluators.
