 In 1877, university Professor Carl von Linde obtained a patent for his refrigerator from the Imperial Patent Office - a patent for something that was not merely an invention, but the result of serious research in the basic laws of physics. Linde went on to found the Linde Company, one of the biggest German Gas and Engineering companies which became one of the models for science based industries. Today, the Linde Group, headquartered in Wiesbaden, Germany, is a global technology company dedicated to gas and engineering, material handling and refrigeration. This book examines the history of this company in the context of the history of technology in industry.

 Images of teenage girls in poodle skirts dominated American popular culture on the 1950's. But as Kelly Schrum shows,

teenage girls were swooning over pop idols and using their allowances to buy the latest fashions well beforehand. After World War I, a teenage identity arose in the US, as well as a consumer culture geared toward it. From fashion and beauty to music and movies, high school girls both consumed and influenced what manufacturers, marketers, and retailers offered to them. Examining both national trends and individual lives, Schrum looks at the relationship between the power of consumer culture and the ability of girls to selectively accept, reject, and appropriate consumer goods. Lavishly illustrated with images from advertisements, catalogs, and high school year books, *Some Wore Bobby Sox* is a unique and fascinating cultural history of teenage girl culture in the middle of the century.

This individual Shop Manual is one unit of a series on agricultural wheel type tractors. Contained in it are the necessary specifications and the brief but terse procedural data needed by a mechanic when repairing a tractor on which he has had no previous actual experience. The material is arranged in a systematic order beginning with an index which is followed immediately by a Table of Condensed Service Specifications. These specifications include dimensions, fits, clearances and timing instructions. Next in order of arrangement is the procedures section. In the procedures section, the order of presentation starts with the front axle system and steering and proceeds toward the rear axle. The last portion of the procedures section is devoted to the power take-off and power lift systems. Interspersed where needed in this section are additional tabular specifications pertaining to wear limits, torquing, etc.

Promotes an unconventional, quantum leap strategy for achieving breakthrough performance. This powerful new method replaces the concept of attaining gradual, incremental success through massive effort. Instead, it puts forth 18 key components for building massive success while expending less effort. Your staff learns to multiply their personal effectiveness, leverage their gifts, and leap beyond ordinary performance expectations.

This book celebrates the efforts of women in the international systems engineering community. While there are dozens of books that tackle the topic of systems engineering and thousands of books that address leadership, this book is unique. *Emerging Trends in Systems Engineering Leadership: Practical Research from Women Leaders* presents personal, well-researched, hands-on perspectives of emerging trends in systems engineering leadership from industry, government, and academia, covering timely topics applicable across many domains – all under one cover. This book presents material for engineers, scientists, technologists, and others to help them tackle challenges in their everyday work dealing with complex socio-technical systems. The book provides guidance for leaders on shoring up essential (soft) skills to address the increasing demand for professional competencies; addresses diversity, equity, inclusion, and empowering women in the workforce; discusses broader facets of systems engineering leadership including systems thinking, ethics and utilitarianism; and investigates the impact of emerging technological change on systems resilience and the digital enterprise. This book provides a multi-perspective approach for leaders to navigate a changing world and develop and deliver optimal system solutions to global societal challenges that meet human needs. To this end, the authors extend beyond the solid

technical base to encompass the human aspect of system behavior. This book is written by twenty-six female authors (three of whom also serve as the editors) from around the world at varying career stages who share their research, achievements, perspectives, and successes in emerging areas of systems engineering leadership. Testimonials: “As the systems that modern society depends on get more complicated and complex, we are in the midst of a renaissance with regard to research relating to systems engineering and science. A vast majority of this research is focused on the development of a modern toolkit for systems engineers today and into the future. This takes the form of new and improved methods, models, methodology, processes and tools. This research is critical but likely insufficient without a focus on the most valuable resource with regard to systems engineering within any organization – the human resource. Therein lies the focus of this textbook. It addresses systems engineering leadership from a variety of perspectives, while also addressing broad aspects relating to mentoring and the necessary evolving competencies that we need to address in today’s workforce. This emphasis makes this book unique. The icing on the cake is that all the chapters in this textbook are written by contemporary women leaders – this provides a necessary and unique perspective on the topic of leadership – that is long overdue! I highly recommend this textbook to all my colleagues in academia, industry, and government.” Dinesh Verma, Ph.D. Professor, Systems Engineering, School of Systems and Enterprises Executive Director, Systems Engineering Research Center (SERC) Stevens Institute of Technology, Hoboken, NJ 07030 “The past decade has seen a dramatic increase in the number of women who are formally recognized in systems engineering technical, management and leadership positions in all sectors. With industry, academia, professional systems engineering societies and publishers enabling and illuminating the growing and substantial contributions of women in engineering, women have unprecedented opportunities today to contribute to systems engineering in both leadership and management positions. This volume, a compendium of chapters written by enterprising international women leaders at various stages in their career, addresses diverse topics such as leadership, management, empowerment, equity, diversity, inclusion, and mentoring. It is a valuable resource for engineering management courses in academia, systems engineering leadership training in industry, and Diversity, Equity, and Inclusion program development by Human Resource departments in industry, academia, and government.” Azad M. Madni, Ph.D., NAENorthrop Grumman Foundation Fred O’Green Chair in Engineering Professor of Astronautics and Aerospace and Mechanical Engineering Executive Director, Systems Architecting and Engineering Program University of Southern California, Los Angeles, CA 90089

**The School and Society** Springer

An account of conflicts within engineering in the 1960s that helped shape our dominant contemporary understanding of technological change as the driver of history. In the late 1960s an eclectic group of engineers joined the antiwar and civil rights activists of the time in agitating for change. The engineers were fighting to remake their profession, challenging their fellow engineers to embrace a more humane vision of technology. In *Engineers for Change*, Matthew Wisnioski offers an account of this conflict within engineering, linking it to deep-seated assumptions about technology and American life. The postwar period in America saw a near-utopian belief in technology’s beneficence. Beginning in the mid-1960s, however, society—influenced by the antitechnology writings of such thinkers as Jacques Ellul and Lewis Mumford—began to view

technology in a more negative light. Engineers themselves were seen as conformist organization men propping up the military-industrial complex. A dissident minority of engineers offered critiques of their profession that appropriated concepts from technology's critics. These dissidents were criticized in turn by conservatives who regarded them as countercultural Luddites. And yet, as Wisnioski shows, the radical minority spurred the professional elite to promote a new understanding of technology as a rapidly accelerating force that our institutions are ill-equipped to handle. The negative consequences of technology spring from its very nature—and not from engineering's failures. "Sociotechnologists" were recruited to help society adjust to its technology. Wisnioski argues that in responding to the challenges posed by critics within their profession, engineers in the 1960s helped shape our dominant contemporary understanding of technological change as the driver of history.

*Eco-Standards, Product Labelling and Green Consumerism*

Bloomsbury Publishing

Back-pocket reference contains all the vital data potential buyers need.

**Anatomy and Physiology Laboratory Manual:  
Understanding How Structure Enables Physiologic  
Function - Text**

How did early modern people imagine their bodies? What impact did the new disease syphilis and recurrent outbreaks of plague have on these mental landscapes? Why was the glutted belly such a potent symbol of pathology? Ranging from the Reformation through the English Civil War, *Fictions of Disease in Early Modern England* is a unique study of a fascinating cultural imaginary of 'disease' and its political consequences. Healy's original approach illuminates the period's disease-impregnated literature, including works by Shakespeare, Milton, Dekker, Heywood and others.

**Minutes of Proceedings and Evidence**

This is the first book on the subject that combines contemporary marketing theory with analysis of operational marketing practice

within the fashion industry. It contains the views of key practitioners and much original case study material from leading fashion organizations to provide unique insights into the reality of fashion marketing.

*Nebraska Tractor Test*

As conscientious consumers, we become overwhelmed with alarms about food contamination, climate change, chemical pollution and other environmental and health-related risks. This book explores green and politically engaged consumersim, asking the question: does green labelling offer ways toward a greener and more democratic society?

*Mastering Fashion Marketing*

This is the fully revised and expanded second edition of *English - One Tongue, Many Voices*, a book by three internationally distinguished English language scholars who tell the fascinating, improbable saga of English in time and space. Chapters trace the history of the language from its obscure beginnings over 1500 years ago as a collection of dialects spoken by marauding, illiterate tribes. They show how the geographical spread of the language in its increasing diversity has made English into an international language of unprecedented range and variety. The authors examine the present state of English as a global language and the problems, pressures and uncertainties of its future, online and offline. They argue that, in spite of the amazing variety and plurality of English, it remains a single language.
