Este libro es parte de la colección e-Libro en BiblioBoard.

*Calcium Entry Blockers in Cardiovascular and Cerebral Dysfunctions* Thomas Nelson

Following its successful predecessor, this book covers the fundamentals, delivery routes and vehicles, and practical applications of drug delivery. In the 2nd edition, almost all chapters from the previous are retained and updated and several new chapters added to make a more complete resource and reference. • Helps readers understand progress in drug delivery research and applications • Updates and expands coverage to reflect advances in materials for delivery vehicles, drug delivery approaches, and therapeutics • Covers recent developments including transdermal and mucosal delivery, lymphatic system delivery, theranostics • Adds new chapters on nanoparticles, controlled drug release systems, theranostics, protein and peptide drugs, and biologics delivery

*Index Medicus* Routledge

Cet ouvrage complet et enrichi de schémas et figures appréhende l'essentiel de la physiologie et de la physiopathologie de la femme sportive pour un

accompagnement scientifique vers la performance. Il s'articule en 3 parties : - La première intègre des notions fondamentales de physiologie sportive en s'appuyant sur des références scientifiques nombreuses et récentes. Y sont développés les spécificités de morphologie, la composition corporelle, les métabolismes hydrique et énergétique, le cœur et l'appareil cardiovasculaire, la grossesse et la ménopause. - La deuxième partie, illustrée de cas concrets, décrit des mécanismes physiopathologiques fréquemment observés chez la femme sportive : les troubles du cycle menstruel, les problèmes pelviens, l'évolution de la densité osseuse, les troubles alimentaires, les anémies, le dopage, la fragilité du système ostéo-ligamentaire. - Enfin, la dernière partie regroupe des conseils pratiques portant sur la nutrition, la contraception et l'état de grossesse.

**Nutritional Biochemistry and Pathology** Springer Science & Business Media

Contraceptives have always provided ground for controversy. This book describes and discusses latest findings concerning the advantages as well as hazard and risk factors of contraception. The clinical impact of oral contraceptives on metabolism is particularly highlighted. In addition, behavioral methods, intrauterine devices, implants and modern approaches in animal and clinical research in the field of immunization against pregnancy are considered. Last, but not least, the book summarizes the complex ethical, religious and political aspects of family planning and contraception.

[Evolutionary Perspectives on Human Sexual Psychology and Behavior](#) Springer Science & Business Media

Since 1952, postgraduate courses for practising physicians and specialists have been given by the Medical Faculty of the University of Leiden in the Boerhaave Quarter, in which most of its clinics and laboratories are located. During these years, recent advances in a wide variety of medical fields

and subjects have been discussed by distinguished speakers from many countries. The steadily increasing attendance has shown that, as could be expected from the rapid progress of modern medicine, there is a widely felt need for this form of postgraduate study. In 1957, therefore, the Leiden Medical Faculty appointed a permanent committee for the organization of postgraduate medical education. Of the courses given since then, certain material proved to have sufficient immediate scientific value to justify publication, and it now gives the Committee great pleasure to announce that in collaboration with the Leiden University Press it will publish the Boerhaave Series for Postgraduate Medical Education. The first volume of this new series is the product of the course on Human Blood Coagulation given in November 1968. It is our hope that this book will prove valuable not only to those who participated in the course but also to many others working in this and associated fields.

Vols. for 1963- include as pt. 2 of the Jan. issue: Medical subject headings.

*Health Financing in Indonesia* Springer Science & Business Media

The Brazilian Society of Nutrition, through the present publication, brings to the attention of the world scientific community the works presented at the XI INTERNATIONAL CONGRESS OF NUTRITION which, promoted by this Society and under the sponsorship of the International Union of Nutritional Science, was held in the city of Rio de Janeiro from August 27th to September 1st, 1978. The publication, edited by Plenum Publishing Corporation, is 11 titled Nutrition and Food Science: Presented Knowledge and Utilization and appears in three volumes. under the following titles and sub-titles: Vol. I - FOOD AND NUTRITION POLICIES AND PROGRAMS - Planning and Implementation of National Programs - The role of International and Non-governmental Agencies - The role of the Private Sector -Program Evaluation and Nutritional Surveillance - Nutrition Intervention Programs for Rural and Urban Areas - Mass Feeding Programs - Consumer Protection Programs Vol. II - NUTRITION EDUCATION AND FOOD SCIENCE AND TECHNOLOGY - Animal and Vegetable Resources for Human Feeding - Food Science and Technology - Research in Food and Nutrition - Nutrition Education Vol. III - NUTRITIONAL BIOCHEMISTRY AND PATHOLOGY - Nutritional Biochemistry - Pathological and Chemical Nutrition - Nutrition, Growth and Human Development vi FOREWORD It is hoped that this publication may prove useful to all those who are interested in the different aspects of Nutrition Science. Editorial Committee: Walter J. Santos J. J.

Presents a program for revitalizing the body, mind, and spirit by restoring energy, vitality, and health and reversing many of the side effects of growing older.

**The Endocrine System in Sports and Exercise** Springer

Comparative endocrinology is one of the most rapidly developing subdisciplines within the field of endocrinology, and it is having a significant impact on research at the molecular, cellular, organismal and environmental levels. Much of the current ferment in endocrinology is in reproductive endocrinology. The purpose of this volume on hormones and reproduction in fishes, amphibians and reptiles is to summarize our present understandings and to identify important research problems to be addressed in the area of comparative reproductive endocrinology. It was inspired by the gathering at Copper Mountain, Colorado, of eminent endocrine scientists from around the world on the occasion of the Tenth International Symposium on Comparative Endocrinology in July, 1985. While preparing for that meeting, we decided that a special volume on reproductive endocrinology was needed to summarize what is known and to stimulate research in particular directions. Why do we emphasize fishes, amphibians and reptiles? First, knowledge about the reproductive endocrinology of these ectothermic vertebrates can provide a clearer picture of the evolution of reproductive hormones and their effects on target organs. This comparative approach can lead to new theories about the evolution of reproductive control mechanisms. Second, studies concerning the reproductive endocrinology of "lower" vertebrates can result in development of "model systems" for application to studies of birds and mammals. Indeed, information about the patterns of reproductive control in ectothermic vertebrates can tell us which are evolutionarily stable and which are labile.

*La Investigación biomédica en México* De Boeck Supérieur

This volume in the Springer Series in Evolutionary Psychology presents a state of the art view of the topic of sexuality and sexual behavior drawing on theoretical constructs and research of noted individuals in the field. Comprehensive and multi-disciplinary, this book seeks to provide a broad overview without sacrificing the complexity of a multi-faceted approach. The book is framed by introductory and closing sections that provide a context for the range of ideas contained within. Ample space is provided in designated sections that focus on key areas of sexuality from both male and female perspectives and that include information from primate studies. This volume can serve as a graduate text in sexual behavior in evolutionary terms and as a guide for further research.

**Homocysteine and Vascular Disease** Springer Science & Business Media

Technics and Civilization first presented its compelling history of the machine and critical study of its effects on civilization in 1934—before television, the personal computer, and the Internet even appeared on our periphery. Drawing upon art, science, philosophy, and the history of culture, Lewis Mumford explained the origin of the machine age and traced its social results, asserting that the development of modern technology had its roots in the Middle Ages rather than the Industrial Revolution. Mumford sagely argued that it was the moral, economic, and political choices we made, not the machines that we used, that determined our then industrially driven economy. Equal parts powerful history and polemic criticism, Technics and Civilization was the first comprehensive attempt in English to portray the development of the machine age over the last thousand years—and to predict the pull the technological still holds over us today. “The questions posed in the first paragraph of Technics and Civilization still deserve our attention, nearly three quarters of a century after they were written.”—Journal of Technology and Culture

This valuable new addition to the Encyclopaedia of Sports Medicine series provides a comprehensive and logical look at the principles and mechanisms of endocrinology as related to sports and exercise. It looks at growth hormone factors involved in exercise and the endocrinology of sport competition. It considers various factors and stresses on the body that may alter sporting performance. It covers topics from the acute responses and chronic adaptations of the human endocrine system to the muscular activity involved in conditioning exercise, physical labor, and

sport activities. This book is an essential reference for helping to plan better programs of physical fitness, to prepare for sports competitions, and to manage the medical care of athletes.

**Bulletin signalétique** IWA Publishing

El propósito principal al renovar esta obra es el deseo de revisar los conceptos ya vertidos en la edición anterior y brindar a quienes lo lean la magnitud de su actualización. Todos estamos conscientes de la velocidad con la que cambian tanto las ideas en sí, muchas de las cuales siguen siendo las mismas, cuanto el torbellino de nuevos cuadros de acción activados por el entusiasmo de los investigadores y de los estudiosos del tema. En esta obra, no son todos los mismos autores que escribieron los capítulos en el tratado anterior. Ahora otros profesionistas que complementan la obra se suman a quienes han dedicado tiempo y esfuerzo para mejorar con su conocimiento la actualización final. Nuevos temas, nuevos capítulos ante la búsqueda de analizar el universo de la patología mamaria. Todos juntos enseñan a las generaciones actuales a pensar y organizar sus ideas dentro del campo del conocimiento y de la razón. Hemos podido contactar dentro de un todo, algo de lo mejor, reconociendo que muchos otros autores más han quedado con nuestro deseo implícito de su colaboración. Logramos llegar a muchos de los principales temas de la mastología en campos, países y sitios diferentes. Su colaboración engrandece no sólo el contenido de la obra, sino que en ella proyectan su calidad a la par que su prestigio científico internacional. Todos y cada uno de ellos, líderes de opinión y conocedores profundos del tema, laboran en muchas de las principales instituciones especializadas. El cáncer mamario es y sin duda seguirá siendo el lastre que la humanidad ostenta en los albores de este siglo. La sociedad continúa reclamando la pronta solución a este ancestral problema dramatizando por la difusión de los medios para su estudio y tratamiento y el por qué se tienen logros sobresalientes en otros medios ambientales y no aún en esta especialidad. Esta obra pretende ser la piedra sobre la cual se pueda trabajar para llegar a conclusiones de consenso y que ofrezca una orientación para un correcto conocimiento de la enfermedad. Nuestra expectativa es que los conceptos vertidos sean discutidos ampliamente para tratar de perfeccionar hasta donde sea posible los criterios actuales y la superación en los diferentes campos de la prevención, diagnóstico y tratamiento e investigación. Invitamos a todos a la lectura de los diferentes capítulos según el interés de cada uno, a realizar críticas constructivas y aplicar en la clínica las decisiones que más convengan para el beneficio de las pacientes con cáncer mamario.

*Pandex Current Index to Scientific and Technical Literature* Karger Medical and Scientific Publishers

This state-of-the-art review provides an in-depth and critical summary of homocysteine from its molecular basis to clinical relevance and current clinical trials of folic acid and vitamin B6. Written by leading workers in the field, the book provides an authoritative, comprehensive and thoroughly up-to-date overview for scientists and clinicians and any others engaged in the field. It will also be useful to anyone involved in managing vascular patients or cardiac risk factors, as well as biochemists, pharmacologists, general physicians, cardiologists and clinical and basic researchers with an interest in preventive medicine.

**Tratado de las enfermedades de la glándula mamaria** World Bank Publications

Male infertility is a clinician-oriented book aimed at the clinician dealing with the infertile couple because rational, effective management is only possible if the couple are considered together. The aim of the work is to provide advice to the clinician and to give reference to the underlying science. This will not only enable clinicians to understand the underlying science but will also give scientists an insight to clinical work. This blend of science and clinical work is reflected in the contributors who are experts drawn from both fields.

*Current Diagnosis & Treatment* Editorial Alfil

Diabetes mellitus is one of the most frequent chronic diseases affecting children and adolescents. The number of young children being diagnosed with type 1 diabetes is increasing worldwide and an epidemic of type 2 diabetes already at a young age is being

**Regaining the Power of Youth at Any Age** Springer Science & Business Media

This revised and updated edition of the pathbreaking report on the global AIDS epidemic outlines the strategic role that government must play in slowing the spread of HIV and mitigating the impact of AIDS. Drawing on the knowledge accumulated in the 17 years since the virus that causes AIDS was first identified, the report highlights policies that are most likely to be effective in managing the epidemic. These include early actions to minimize the spread of the virus, aiming preventive interventions at high risk groups, and evaluating measures that would assist households affected by AIDS according to the same standards applied to other health issues. This revised edition will a valuable resource for public health, policymakers, researchers, and anyone with an interest in this devastating global health crisis.

Land-Saving Action presents 35 articles from 29 of the foremost practitioners of land conservation nationwide. Case studies, detailed references, and a complete index make this volume unsurpassed in its usefulness to everyone who is concerned with saving land.

**Toxicity Bibliography** Ediciones Díaz de Santos

The free internal Ca<sup>2+</sup> concentration in human red cells is set according to the leak and-pump principle: There is a finite passive Ca<sup>2+</sup> influx at the physiological Ca<sup>2+</sup> gradient across the membrane which is compensated by Ca<sup>2+</sup> pumping in the outward direction with a rate given by the degree of saturation of the ATP-fuelled Ca<sup>2+</sup> pump at the steady-state internal Ca<sup>2+</sup> concentration. Simons (1982) recently devised a method allowing the measurement of the steady-state internal Ca<sup>2+</sup> concentration. Cells are suspended in media of different Ca<sup>2+</sup> concentration whose Ca<sup>2+</sup> concentration is monitored by a Ca<sup>2+</sup>-selective electrode. When the cells are lysed (by digitonin) there is an upward or downward deflection of the electrode signal. At the point of zero deflection, the cellular Ca<sup>2+</sup> concentration equals that of the medium. The result is, that in fresh human red blood cells the Ca<sup>2+</sup> concentration is 0.4 μM (this is an upper estimate; the true value may be considerably lower).

**A Clinical Guide to the Treatment of the Human Stress Response** Springer

Gain at-a-glance management from one handy reference -- the new second edition of Current Diagnosis and Treatment. It depicts 230 of the most common clinical conditions, with full-color photos to help speed your diagnoses and treatment decisions. \* Features 37 new conditions, including alcohol problems, basal cell carcinoma, breast cancer, carpal tunnel syndrome, cystic fibrosis, fibromyalgia, knee injuries, low back pain, male impotence, menopause, osteoarthritis, pressure ulcers, urinary incontinence, and more! \* Each disorder is covered on a two-page spread: diagnosis

on the left and treatment on the right \* Highlights differential diagnosis, etiology, epidemiology, treatment options, prognosis, follow-up, and management for each disorder
