Differential equations for engineers - YouTube History. Differential equations first came into existence with the invention of calculus by Newton and Leibniz. In Chapter 2 of his 1671 work *Methodus fluxionum et Serierum Infinitarum*, Isaac Newton listed three kinds of differential equations:  $y' = f(x)$ ,  $y'' = f(x, y)$ , and  $y'' = f(x, y, y')$ . In all these cases,  $y$  is an unknown function of  $x$  (or of  $t$ ), and  $f$  is a given function.
