 This accessible introduction shows the reader how to understand, implement, adapt, and apply Learning Classifier Systems (LCSs) to interesting and difficult problems. The text builds an understanding from basic ideas and concepts. The authors first explore learning through environment interaction, and then walk through the components of LCS that form this rule-based evolutionary algorithm. The applicability and adaptability of these methods is highlighted by providing descriptions of common methodological alternatives for different components that are suited to different types of problems from data

mining to autonomous robotics. The authors have also paired exercises and a simple educational LCS (eLCS) algorithm (implemented in Python) with this book. It is suitable for courses or self-study by advanced undergraduate and postgraduate students in subjects such as Computer Science, Engineering, Bioinformatics, and Cybernetics, and by researchers, data analysts, and machine learning practitioners.

 This book explains the institutionalization of nearly unconditional American support of Israel during the Reagan administration, and its persistence in the first Bush administration in terms of the competition

of belief systems in American society and politics. Michael Thomas explains policy changes over time and provides insights into what circumstances might lead to lasting changes in policy. The volume identifies the important domestic, social, religious and political elements that have vied for primacy on policy towards Israel, and using case studies, such as the 1981 AWACS sale and the 1991 loan guarantees, argues that policy debates have been struggles to embed and enforce beliefs about Israel and about Arabs. It also establishes a framework for better understanding the influences and constraints on American policy towards Israel. An epilogue applies the lessons learned to the current Bush administration. American Policy toward Israel will be of interest to students of US foreign policy, Middle Eastern politics and international relations.

Deuteronomy 10:12-11:32 is a very important text for the book of Deuteronomy. However, it has not received an adequate exegetical treatment so far. The present study intends to meet this need. Following a synchronic approach Thomas

Karimundackal examines the text exegetically and theologically in its context. He analyzes the text extensively by referring to its intense relationships within Deuteronomy and with other biblical books. He shows how Deuteronomy 10:12-11:32 serves as a hermeneutical key to understand and interpret the theology of Deuteronomy. As a transitional passage, it connects the former framework and the Law Code in Deuteronomy, and thus forms a bridge. In addition, it is repeatedly connected to the latter framework of Deuteronomy, and thus proves to be a hermeneutical key to the book. From a theological point of view, the unique statements about God in Deut 10 stand out. The author also reflects on the role of the community and the contemporary relevance of the text.

The early twenty-first century has been defined by a rise in Islamist radicalisation and a concurrent rise in far right extremism. This book explores the interaction between the 'new' far right and Islamist extremists and considers the consequences for the global terror threat. Julia Ebner argues that far right and Islamist extremist narratives - 'The West is at war with Islam' and 'Muslims are at war with the West' - complement each other perfectly, making the two extremes rhetorical allies and building a spiralling torrent of hatred - 'The Rage'. By looking

at extremist movements both online and offline, she shows how far right and Islamist extremists have succeeded in penetrating each other's echo chambers as a result of their mutually useful messages. Based on first-hand interviews, this book introduces readers to the world of reciprocal radicalisation and the hotbeds of extremism that have developed - with potentially disastrous consequences - in the UK, Europe and the US.

Caspian Energy Politics analyses the role of oil and gas in the development of the three main petroleum exporters in the Caspian region - Azerbaijan, Kazakhstan and Turkmenistan - and how energy resources influence interactions with semi-authoritarian Russia and China. Due to volatile commodity prices and competition for the resources in and around the Caspian Sea, the governments of these petroleum-exporters face a series of difficult decisions. These governments have sought to balance short-term incentives to spend oil revenues as a means to maintain power against the need for a long-term strategy for managing these assets, choices which have further implications for how these countries align themselves internationally. By illuminating important linkages between domestic and international dynamics in these states, the book provides a fresh perspective on energy politics and the impact of petroleum on the development of the Caspian petroleum producers. Expert contributors from Central Asia and the South Caucasus and international scholars provide context-specific insights into the incentives affecting decision-makers that can provide a foundation for strategies to help the countries in the region overcome the negative effects of reliance on oil and gas. As such, the book will be a valuable tool for business actors seeking to understand the role of Chinese and Russian companies in the region, as well as local and international policymakers and non-governmental organisations.

Historians have mainly concentrated on the significance of the Marshall Plan, the creation of NATO, and exports of pop culture to describe the role of North Americans in the development of West Germany after the devastation of the Second World War. In *Saving Germany*, James Enns brings an entirely new focus to West Germany's recovery by demonstrating how North American missionaries played a formative role in

cultivating the humanitarian and spiritual conscience of postwar Germany. Enns begins by categorizing the kinds of Protestant missionary agencies active in West Germany, which ranged from mainline churches overseeing ecumenical humanitarian and church reconstruction projects to independent evangelical mission agencies working alongside local church groups. He then identifies notable themes that contextualize the spectrum of missionary responses, including the degree to which missionaries intentionally functioned as agents of Western democracy. In addition to discussions of well-known figures such as US evangelist Billy Graham, Enns highlights the important contributions of the Janz Quartet from the Canadian prairies and Robert Kreider of the Mennonite Central Committee. Tracking thirty years of transnational Christian missionary work, *Saving Germany* demonstrates the significant role of North American missionary agencies in the reconstruction of Germany.

Few would deny the intense attack on today's families. Rather than having the close-knit relations they dream of, little by little, people from all walks of life are seeing their families torn apart. But God's Word offers hope and solutions. That's why Kenneth and Gloria Copeland have created *Family Promises* a collection of scriptures and nuggets of truth especially for families. Inside, you'll find scripture you can stand on for singleness, marriage, children, your in-laws, brothers and sisters in Christ and more. This book is great for accompanying your Bible study, prayer time or even for personal reference. When you get the truth of God's Word concerning your family fixed and established in your heart, nothing will be able to tear it apart. Read *Family Promises* over and over. Meditate on God's promises for your family. Confess them aloud daily. Stand on them in faith and act on them. Then when the devil comes around to try to destroy your marriage or steal your children, you can resist him with the Word. As for me and my house, we will serve the Lord (Joshua 24:15).

Fourteen years after fleeing Kenya with her baby daughter, Corinne returned in the summer of 2004 to meet Lketinga and his family again in their village, Barsaloi. Nervous as she was, and uncertain as to how he would react on seeing her again, she found to her relief that she was welcomed unreservedly by all those who remembered her - by Lketinga, who still thought of her as his 'wife number one', by

his brother, James, now a schoolteacher and especially by Lketinga's mother, who had looked after Corinne with such care all those years before. Corinne Hofmann revisits an area of a country which she cares about passionately, describing in her immensely readable style the changes she saw after her time away, and once again bringing to life the atmosphere and characters in the Masai village.

Scientists and engineers must use methods of probability to predict the outcome of experiments, extrapolate results from a small case to a larger one, and design systems that will perform optimally when the exact characteristics of the inputs are unknown. While many engineering books dedicated to the advanced aspects of random processes and systems include background information on probability, an introductory text devoted specifically to probability and with engineering applications is long overdue. *Probability for Electrical and Computer Engineers* provides an introduction to probability and random variables. Written in a clear and concise style that makes the topic interesting and relevant for electrical and computer engineering students, the text also features applications and examples useful to anyone involved in other branches of engineering or physical sciences. Chapters focus on the probability model, random variables and transformations, inequalities and limit theorems, random processes, and basic combinatorics. These topics are reinforced with computer projects available on the CRC Press Web site. This unique book enhances the understanding of probability by introducing engineering applications and examples at the earliest opportunity, as well as throughout the text. Electrical and computer engineers seeking solutions to practical problems will find it a valuable resource in the design of communication systems, control systems, military or medical sensing or monitoring systems, and computer networks.

The international bestseller. An enthralling exploration of the science of happiness. We all know what it feels like to be happy, but what mechanisms inside our brains trigger such a positive emotion? What does it really mean to be happy, and why can't we feel that way all of the time?

Psychologists and neuroscientists have been studying negative emotions for decades, but until recently few have focused on the subject of happiness. Now, in *The Science of Happiness*, leading science journalist Stefan Klein ranges

widely across the latest frontiers of neuroscience and psychology to explain how happiness is generated in our brains, what biological purpose it serves, and the conditions required to foster the 'pursuit of happiness'. A remarkable synthesis of a growing body of research that has not been brought together before, *The Science of Happiness* is, ultimately, a book that helps us understand our own quest for happiness -- and is certain to help make you happier.

From Christianity's very beginning, it has had a difficult relationship with the world of money. Through developing sophisticated understandings of the nature and wealth-creating capacity of capital,

Christian theologians, philosophers, and financiers exerted considerable influence upon the emergence and development of the international financial systems that helped unleash a revolution in the way the world thinks about and uses capital. In *For God and Profit*, Samuel Gregg underscores the different ways in which Christians have helped to develop the financial and banking systems that have helped millions

escape poverty for hundreds of years. But he also provides a critical lens through which to assess the workings--and failures--of modern finance and banking. Far from being doomed to producing economic instability and periodic financial crises, Gregg illustrates that how Christian faith and reason can shape financial practices and banking institutions in ways that restore integrity to our troubled financial systems.
